The **Social Security Bulletin** is the official monthly publication of the Social Security Administration. Calendar-year data for each year 1939–48 were published in the **Social Security Yearbooks** and, beginning with data for 1949, in the **Annual Statistical Supplements** to the **Bulletin**. (The **Supplements** with data for each year 1949–54 were included in the September **Bulletin**, 1950–55; beginning with 1955 data, the **Supplement** is a separate publication.) Statements in **Bulletin** articles do not necessarily reflect official policies of the Social Security Administration

The **Bulletin** is prepared in the Office of Research and Statistics, Office of Policy, Social Security Administration, under the general supervision of Robert Robinson, Chief of the Publications Staff, and the editorial supervision of Marilyn Thomas. Suggestions or comments concerning the **Bulletin** should be addressed to the Office of Research and Statistics.

The **Social Security Bulletin** is for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. A copy of the **Supplement** is included in the annual subscription price of the **Bulletin**.

Price: $22.00 a year in the United States and $27.50 in all other countries; single copies, $3.50 domestic and $4.40 foreign. Price of the 1980 **Supplement** is $5.50 domestic and $6.90 foreign.

Use of funds for printing this publication has been approved by the Office of Management and Budget (June 30, 1983).

## Resignation of Deputy Commissioner

Robert J. Myers has resigned as Deputy Commissioner of Social Security for Programs, effective January 8. In the post since March 1981, Mr. Myers is a former Chief Actuary of the Social Security Administration and an international authority on social insurance and pension programs. An article he prepared before his resignation, on investing the assets of the Social Security trust funds, appears on page 3 of this issue of the **Bulletin.**

Commissioner John A. Svahn announced the resignation with "deepest personal regret," noting that Mr. Myers has "worked exceedingly hard with this Administration and the Congress toward obtaining a lasting reform of Social Security." With the adjournment of the Congress and the establishment of the bipartisan National Commission on Social Security Reform, Mr. Svahn said, "Bob believes that he can be more effective in achieving a goal that we all share by working in the private sector. We will miss his day-to-day counsel, but I am certain that he will continue to work with us until the Social Security financing issues are resolved."

"Bob Myers has done a tremendous job in his second career with Social Security," the Commissioner added. "I personally appreciate the leadership and advice he has given to me. He has been with Social Security from its beginning, and his formal departure from Social Security will by no means lessen his intense devotion to the program that he has done so much to build."

## National Commission on Social Security Reform

On December 16, 1981, President Reagan announced the membership of the National Commission on Social Security Reform, a bipartisan panel that will seek solutions to the financial problems facing the Social Security program. Named by the President to the Commission were:

Alan Greenspan (chairman), former chairman of the Council of Economic Advisors in the Ford Administration.

Robert A. Beck, chairman of the board, Prudential Insurance Company of America.

Mary Falvey Fuller, vice president for finance, Shaklee Corporation, San Francisco; member of the 1979 Advisory Council on Social Security.

Alexander B. Trowbridge, president, National Association of Manufacturers.

Joe D. Waggonner, Jr., consultant, Bossier Bank & Trust Company, Plain Dealing, La.; former Democratic Representative from Louisiana.

The following members were named by Speaker Thomas P. O'Neill, Jr., of the U.S. House of Representatives:

Robert M. Ball, former Commissioner of Social Security.

Martha Keys, former Democratic Representative from Kansas.

Representative Claude Pepper (D.-Fla.), chairman, House Select Committee on Aging.

Named to the Commissioner by House Minority Leader Robert H. Michel were:

Representative Bill Archer (R.-Texas), ranking minority member, Subcommittee on Social Security, Committee on Ways and Means.

Representative Barber B. Conable, Jr. (R.-N.Y.), ranking minority member, Committee on Ways and Means.

Named by Senate Majority Leader Howard H. Baker, Jr., were:

Senator Robert J. Dole (R.-Kansas), chairman of the Senate Finance Committee.

Senator Daniel Patrick Moynihan (D.-N.Y.), ranking minority member, Social Security Subcommittee, Senate Finance Committee.

Senator William L. Armstrong (R.-Colo.), chairman, Social Security Subcommittee, Senate Finance Committee.

Senator John Heinz (R.-Pa.), member of the Senate Finance Committee.

Lane Kirkland, president of the AFL-CIO.

## Program Operations

### OASDI Benefits

In September 1981, 288,324 monthly cash benefits were awarded under the Old-Age, Survivors, and Disability Insurance (OASDI) program—33 percent of which were to retired workers and 10 percent to disabled workers. Eighty-six percent of all awards and 79 percent of awards to retired workers were immediately payable. The average monthly benefit amounts for currently payable awards were $389.30 for retired workers and $424.51 for disabled workers.

At the end of September 1981, 35,833,358 beneficiaries under the OASDI program were receiving cash benefits totaling $12.1 billion—an increase of 405,000 in the number of beneficiaries and $1.6 billion in monthly benefits since September 1980. The OASI program accounted for 93 percent of the rise in the amount of monthly benefits and 100 percent of the increase in the number of beneficiaries. Retired workers numbered 19,976,257 or 56 percent of the total number of OASDI beneficiaries.

During the 12-month period ended September 1981, the monthly amount of OASDI benefits rose 16 percent, and the number of beneficiaries increased 2 percent. The amount of DI benefits rose 9 percent, while the number of beneficiaries decreased 4 percent.

Average monthly benefit amounts paid in September 1981 to retired and disabled workers were $384.46 and $413.57, respectively. A year earlier, average benefits were $339.78 for retired workers and $370.32 for disabled workers.

## SSI Payments

**Federally administered payments.** In September 1981, 4,037,900 persons received federally administered Supplemental Security Income (SSI) payments, a decline of 4,900 from the August total. The number of disabled and blind recipients rose by 2,900 and 200, respectively, while the aged caseload dropped by 8,000. Among individual States, only 13 experienced an increase in their total SSI caseload. The number of disabled recipients rose in 39 States, blind in 28, and aged in 2.

Federally administered payments totaled $736.2 million in September, up $3.2 million from the previous month. Federal SSI payments rose by $2.6 million to $580 million and federally administered State supplementation by $580,000 to $156.2 million.

**State-administered supplementary payments.** Persons receiving State-administered supplementation numbered 252,500 in July, up slightly from the June total. Expenditures for supplementary payments declined slightly from $19.5 million in June to $19.3 million in July. Of the 25 States reporting, six experienced increases in both their supplementation caseloads and expenditures, nine had declines in both, seven showed reductions in either their caseloads or expenditures, and three States reported no changes.

| **OASDI** | **September 1981** | **August 1981** | **September 1980** |
|---|---|---|---|
| **Monthly beneficiaries, total** (in thousands) | 35,833 | 35,792 | 35,428 |
| Aged 65 and over, total | 24,198 | 24,110 | 23,614 |
| Retired workers | 17,872 | 17,798 | 17,367 |
| Survivors and dependents | 6,246 | 6,231 | 6,150 |
| Special age-72 beneficiaries | 80 | 81 | 97 |
| Under age 65, total | 11,635 | 11,682 | 11,814 |
| Retired workers | 2,104 | 2,130 | 2,021 |
| Disabled workers | 2,805 | 2,814 | 2,860 |
| Survivors and dependents | 6,726 | 6,738 | 6,933 |
| **Total monthly benefits** (in millions) [1] | $12,139 | $12,103 | $10,580 |
| **Average benefit in current-payment status:** | | | |
| Retired workers | $384.46 | $383.81 | $339.78 |
| Disabled workers | 413.57 | 413.61 | 370.32 |
| Aged widows and widowers | 345.25 | 344.97 | 307.36 |
| Children of deceased workers | 269.99 | 269.20 | 238.37 |
| **Average benefits awarded:** | | | |
| Retired workers | $426.82 | $393.67 | $363.17 |
| Disabled workers | 424.18 | 431.42 | 394.75 |
| Aged widows and widowers | 337.64 | 338.91 | 302.24 |
| Children of deceased workers | 264.62 | 260.22 | 238.50 |

# Investment Policies and Procedures of the Social Security Trust Funds

by Robert J. Myers*

In this article, the Deputy Commissioner of Social Security for Programs describes the policies and procedures that have been followed in investing the assets of the Social Security trust funds, explores possible alternative investment areas, and counters criticisms of investment results and maturity durations. The author's analysis shows that a departure from the current practice of investing most of the assets in long-term special issues of Federal debt would have adverse consequences for the private industrial economy, the Treasury Department, or the economy in general. He notes that, although the interest income of the trust funds in 1980 amounted to only 2.46 percent of the Social Security program's total income, the amount involved—$3.85 billion—was 1.5 times as large as total administrative expenses.

This article discusses the current and past investment policies of the four Social Security trust funds—the Old-Age and Survivors Insurance (OASI) Trust Fund, the Disability Insurance (DI) Trust Fund, the Hospital Insurance (HI) Trust Fund, and the Supplementary Medical Insurance (SMI) Trust Fund—especially as they relate to securities that are specially issued to the trust funds. The investment of the assets of these funds is, by law, the responsibility of the Secretary of the Treasury, as Managing Trustee of the Board of Trustees of the several trust funds. However, the Social Security Administration has, understandably, always taken a great interest in this matter.

Although the interest income of the Social Security program is not a major factor in its financing—whereas in funded private pension plans investment income is a very significant element—neither is it of negligible importance. For example, in calendar year 1980, the interest income of the four trust funds was only 2.46 percent of the total income. However, such interest income amounted to the not insignificant sum of $3.85 billion, which was 1.5 times as large as the administrative expenses of the program.

## Investment Procedures

The basic operating principles as to investing the assets of the trust funds have changed relatively little since the program was enacted. In general, the trust funds receive the taxes and other income and pay the benefits and administrative expenses. The excess of the income over the outgo is invested in obligations of the Federal Government, and the interest therefrom augments the income of the system.

Before July 1940, the authorized appropriations to the Old-Age Reserve Account (as it was called then) were not specifically to be measured by the taxes collected, but rather they were to be "an amount to be determined on a reserve basis in accordance with accepted actuarial principles." Underlying legal and constitutional aspects that made a distinct division between the taxes collected and the benefits paid seemed desirable. In actual practice, however, this language was interpreted to mean that the appropriations should be the estimated net proceeds of the taxes, after deduction for the estimated administrative expenses (which procedurally were paid out of the General Fund of the Treasury but, of course, in practice came from the gross Social Security tax receipts).

After the program was declared to be constitutional in 1937, this indirect procedure was no longer necessary. As a result, the 1939 Amendments to the Social Security Act provided for the current automatic-appropriation basis, under which the Social Security tax collections are automatically appropriated to the trust funds as they are collected by the Treasury Department.

The trust funds can be invested in any interest-bearing security issued by the Federal Government. Some regular Government securities have been bought, both on the open market and when they were offered to the general public. Also, special legislation has provided that certain semi-Government issues—such as those of the Government National Mortgage Association—can be purchased by the trust funds, even though they are not guaranteed as to both principal and interest by the Federal Government. Most of the investments, however, have been in special issues of Federal debt that are offered only to the trust funds. As of June 30, 1981, about 92 percent of the assets of the four trust funds were in such special issues (table 1).

---

*Mr. Myers resigned as Deputy Commissioner of Social Security for Programs effective January 8. He formerly served as Chief Actuary from 1947 to 1970.

The original 1935 Act provided that any such special issues should bear an interest rate of 3 percent. The 1939 Amendments changed this basis so that newly acquired special issues would carry an interest rate slightly below the average coupon rate on all interest-bearing obligations of the United States outstanding at the end of the month preceding their issuance.

The 1956 Amendments to the Social Security Act changed the interest basis for special issues so that it was determined from the average coupon rate on all long-term Government obligations (those issued initially for 5 or more years), rounded to the nearest 1/8 percent. The 1960 Amendments revised this interest basis, so that the interest rate is now determined from the average market yield rate on Government obligations that are not due or callable for at least 4 years from the date of determination. The actual experience over the years as to the interest rates applicable to special issues and the durations until their maturities is described in the appendix to this article.

For some years, the maturity dates of newly issued special issues have been set by a definite procedure, which was established by the Managing Trustee with the agreement of the other Trustees—and not by the law. Specifically, as soon as payroll-tax revenues are received by the Treasury Department, any funds available for investment are put into special issues called certificates of indebtedness. These certificates mature at the end of the investment year, which runs from July 1 to the following June 30.

Each June 30, the certificates of indebtedness are redeemed and the proceeds are put into long-term special-issue bonds, each with a maturity date of June 30 in some future year. The terms to maturity of newly acquired special issues are set so that, as much as is possible, one-fifteenth of the total portfolio of special issues (including those bonds on hand on the June 30 date) will mature in each of the next 15 years. This procedure has the result, generally, of a sizable proportion of the bonds being purchased on any given June 30 having a maturity of 15 years thereafter (because on the previous June 30, when long-term bonds were bought, this point of time was beyond the 15-year period then considered).

**Table 1.**—Distribution of assets of Social Security trust funds, by type, June 30, 1981

[In millions]

| Category | Total | OASI | DI | HI | SMI |
|---|---|---|---|---|---|
| Total assets | $52,430 | $27,147 | $3,884 | $17,599 | $3,800 |
| Special issues | 48,412 | 23,393 | 3,569 | 17,659 | 3,791 |
| Marketable securities [1] | 2,291 | 1,996 | 295 | ....... | ....... |
| Participation certificates | 605 | 555 | ....... | 50 | ....... |
| Undisbursed balances | 1,121 | 1,203 | 19 | −110 | 9 |

[1] U.S. Treasury securities only (participation certificates of the Government National Mortgage Association are also marketable, but are not included here).

During the investment year, securities must be sold to meet benefit obligations (which peak at the beginning of the month for the OASI and DI Trust Funds, but not for the HI and SMI Trust Funds). The special issues with the shortest durations until maturity are sold first. Thus, any certificates of indebtedness are the first to be so sold. In the event that there are several securities with the same duration until maturity, those with the *lowest* interest rate are sold first.

When special issues are sold, they are redeemed by the Treasury Department at their par value, which is their purchase price. This option is not available to other purchasers of Federal securities who might wish to sell them and is of considerable financial advantage to the trust funds in times of rising interest rates (which, in general, has been the situation in the last two decades). If the investments were required to be made only in marketable obligations, the securities would be redeemable only on a market-value basis. Under such conditions, significant losses of principal would often be involved, especially when securities with low coupon interest rates were redeemed. Under other circumstances, this procedure of redemption of special issues at par value could produce an unfavorable result for the trust funds compared with a market-value redemption basis—namely, when the securities to be sold have a higher coupon interest rate than the average market-yield rate at that time.

In summary, the procedure followed as to redemption of securities before their maturity is an equitable one insofar as the trust funds are concerned. In recent years, when interest rates have been rising, this procedure has generally (but not always) been financially advantageous to the trust funds. Further, because of the rules being prescribed, all conflicts of interest involving the Managing Trustee are eliminated.

## Possible Alternative Investment Areas

Although there has, at times, been considerable opposition to investing the excess income of the system in Government bonds, no compelling case has been offered for any other form of investment. All other possibilities seem to have one or more objectionable features.

One possible investment practice would be to purchase securities of private concerns, either bonds or stocks, as part of the portfolio. There are several objections to this approach. First, with the large amounts of money possibly available (especially if the trust-fund balances increase in the future from their present relatively low levels), the Federal Government would control a considerable portion of the private industrial economy, which would, in effect, result in "socialism by the backdoor method."

Another practical disadvantage would be the need for a far-reaching and deep-searching investment policy that would permit the trust funds to obtain an adequate rate of interest with reasonable security of principal. Under such a policy, the Federal Government would, in effect, be setting itself up as a rating organization, because the investment procedures would naturally have to be open to full public view. If no preference were shown for different types of securities, but rather investments were made widely and indiscriminately, there would be a substantial risk of diminution of investment income, or even loss of principal.

In any event, a sizable proportion of the trust-fund assets would have to be invested in Government securities, because of the wide fluctuations in the fund balances, both over the months of a year and over the days of a month. The redemptions of securities needed for these purposes would disrupt the private market if the investments were in private-sector securities.

Another possible procedure would be to invest the funds in social and economic activities such as the construction of housing, hospitals, and the like (as is done in some countries). This method would be open to objection on the grounds mentioned previously—increased governmental entry into private fields of activity. Even more serious is the argument that any use of public funds for such purposes should be under the control of the elected representatives of the people (Congress), rather than a social insurance organization. Also, such forms of investment are not very liquid, and the monies involved would not be readily available at times when outgo exceeded income. Accordingly, it may properly be concluded that investment of the assets of the Social Security trust funds are most properly invested only in securities of the Federal Government.

## Criticisms of Trust-Fund Investment Results

In light of current high interest rates, there has been criticism of the investment results of the Social Security trust funds. For example, it has been pointed out that, during the 12-month period ended June 30, 1980, the effective annual rate of interest earned by the combined OASI and DI Trust Funds was only 8.4 percent, whereas at that time private money managers were earning about 13 percent.

This is not a valid comparison, because it contrasts the investment return of a portfolio of securities purchased over a long period with the current, relatively high new-issues rate. The securities bought by the trust funds in the past bore interest rates that were proper and equitable at the time of purchase.

On the other hand, the high interest rates quoted for private money managers are those obtained for securities purchased currently. Any private investment organization that has built up a portfolio over the years (and has done so in a prudent manner) would currently have a much lower *average* rate of investment return for its total portfolio than it would for securities bought currently. Another important element in such comparisons is whether the investment procedure is to invest in short-term obligations or in long-term ones (which matter will be discussed in the next section).

Thus, in comparing current investment managers, one should not simply measure the average rate of return on their total portfolios, which may have been acquired with much different timing, but rather one should take into account other factors—for example, how they are doing on their current investments. In that regard, the Social Security trust funds have been obtaining relatively high interest rates on their current investments. For example, the interest rate on special issues acquired in June 1981 was 13 percent, and it was at this rate that some $20 billion of new issues were acquired on June 30, with maturities of up to 15 years.

Moreover, as old securities mature, and as new higher-interest securities are purchased, the *average* effective rate of return for the assets of the trust funds will rise. Thus, compared with the rate of 8.4 percent for the year ended June 30, 1980, the rate for the year ended June 30, 1981, was 8.8 percent. Table 2 shows these effective rates of return for various years for each of the trust funds. It is significant to note that, despite each of the funds receiving exactly the same rate on special issues purchased at the same time, the average effective rates for various years differ significantly. This is, of course, due to the different times of purchase of the various securities.

Also, it is significant to note in considering the investment rate of return of the OASDI Trust Funds in the 12-month periods ended June 30, 1980, and June 30, 1981—8.4 percent and 8.8 percent, respectively, or an average of 8.6 percent—that the net rate of investment income (before Federal income taxes) of all United States life insurance companies in calendar year 1980 was 8.0 percent.[1] Thus, the trust funds had an investment experience closely comparable with that of life insurance companies in the aggregate.

A life insurance company formed in 1980 would, of course, have had a much higher rate of return, because it would be holding only new investments, bearing a

[1] Rounded to the nearest 1/8 percent.

[2] Average market-yield rate of U.S. marketable obligations with 4 or more years until maturity.

relatively high rate of interest. This, however, would not "prove" that the company was a sagacious investor or, on the contrary, that the older, well-established companies were stupid investors.

## Criticism of Duration of Investments

Finally, the criticism has, at times, been levied that the Social Security trust funds should be invested in short-term obligations of the Federal Government, rather than long-term ones. It would have been feasible for the investments of the Social Security trust funds to have been put in short-term obligations subject to a rollover every year (or even every month) instead of in long-term obligations, generally having a maturity length of 15 years. Such an investment procedure could presently take advantage of the high current short-term interest rates. In hindsight—just as with other investment experience—this strategy might have proven to be more advantageous.

Certainly, the general experience in the past has been that long-term interest rates are somewhat higher than short-term ones, even though this is not so at the moment. Accordingly, over the long run, the long-term-interest-rate procedure would seem preferable. Table 3 compares the average market-yield rate of all obligations of the Federal Government with the corresponding long-term rate that the trust funds have received on new special issues. For 1967-81, the interest-rate basis used for Social Security trust-fund investments was higher than the all-obligations rate in 9 years (with 1 year being the same). The average excess was 0.35 percentage points.

Furthermore, the current high interest rates of, say, 13 percent are unlikely to last for much longer. With interest rates lower in the years ahead, a change now to short-term securities would not be nearly as advantageous as continuing the present procedure and having the very large amount of long-term investments that are now "locked in" at 13-percent interest, compared with the much lower rates that might be obtained in the future.

Another investment strategy that is recommended occasionally is for the assets of the Social Security trust funds to be rolled over each June 30 into new securities with the highest current yield, but only for such existing securities that have a lower yield than current yields. Such a strategy would be very advantageous to the Social Security program, but correspondingly disadvantageous—and, in fact, inequitable—to the General Fund of the Treasury, which would have to pay the higher amounts of interest due from general revenues. Thus, while the Social Security trust funds would do better with such a strategy, the additional interest earnings would *ultimately* be reflected in higher Federal income taxes or in a larger Federal deficit. In other words, it would be an indirect form of general-revenue financing for Social Security. And then too, private investors are not given this "best of both worlds" possibility.

## Summary and Conclusions

The present investment policies and procedures for the Social Security trust funds seem to be proper and equitable both to these funds and to the General Fund of the Treasury. Likewise, both the insured persons under Social Security and the general taxpayers—who are, by and large, the same persons—seem to be treated in a fair, equitable, and consistent manner.

The rates of return obtained by the trust funds currently appear reasonable in light of past investment experience. It can well be viewed that the appropriate investment procedure is to choose one investment policy and remain with it, rather than attempt to do better by speculating, through jumping back and forth among investment strategies.

## Appendix

### Durations Until Maturity of Special Issues

In 1940-43, the new special issues in which the assets of the Social Security trust funds were invested were for durations of 4 or 5 years. Beginning in 1944, some new special issues were for durations of 1 year or less; beginning in 1945, all new special issues were of this duration. Accordingly, beginning in 1947, the entire investment portfolio was reinvested each year on June 30. This procedure was followed until 1957, when a transition was begun toward spreading the investment portfolio of each of the trust funds over the following 10 years. Investments during a fiscal year were made in certificates that matured at the end of the year, on June 30. At that time, the funds from the maturities were reinvested in long-term notes (up to 7 years until maturity) or bonds (with maturities of 7 years or more).

Then, in 1959, the permanent portfolio of special issues was spread more or less equally over the next 15 years, and this principle was followed until the late 1960's. Then, to be equitable to the trust funds as interest rates rose above 4 1/4 percent, this principle was suspended, and new special issues were given a maturity of 7 years, because other provisions of law prohibited a rate higher than 4 1/4 percent for longer-term securities. Such prohibition was removed insofar as the trust funds were concerned in mid-1974. Blocks of special issues at an interest rate of 7 5/8 percent were then purchased with the funds available for investment, in equal amounts maturing in each year 1981-89. Since 1974, the "equal spreading over 15 years" principle has been followed.

### Interest Rates on Special Issues

The special-issue interest rate was initially 2 1/2 percent (in 1940), but as large volumes of long-term Government bonds were floated to finance World War II, the rate gradually decreased and reached a low of 1 7/8 percent in the period from May 1943 to July 1946. Thereafter, the rate gradually rose to 2 5/8 percent for the period from July 1958 to September 1960, which was the last month before the new basis provided by the 1960 Act went into effect. (The interest rates on special issues purchased from January 1951 to December 1981 are shown in table I.)

When the interest basis was changed by the 1956 Amendments to the Social Security Act (effective for October 1956), there was no change in the rate actually made available to the trust funds. As it happened, under the conditions prevailing at that time, the new method of basing the rate on long-term obligations (rather than on all obligations) produced a slightly lower unrounded rate, but the change in the rounding procedure produced a final result that was exactly the same as the previous basis.

The new basis under the 1960 Amendments produced a sharp increase in the special-issue interest rate, yielding rates of 3 5/8 to 4 percent for issues purchased in the last 3 months of 1960—appreciably in excess of the 2 3/4-percent rate that would have been in effect under the old basis. During 1961-65, this interest rate was generally between 3 3/4 percent and 4 1/4 percent, but thereafter it rose significantly, reaching a high of 7 7/8 percent in February 1970. Then the rate fell somewhat and was about 6 percent during 1971-72, but rose to about 6 3/4 percent during 1973. It increased further in 1974, reaching a peak of 8 1/8 percent in September, but fell to about 7 to 7 1/2 percent thereafter through 1977. In 1978, the rate increased to as much as 8 7/8 percent and was as high as 10 1/2 percent in late 1979. It then increased sharply in early 1980, peaking at 12 3/8 percent in March, then fell to 9 3/4 percent in June, and thereafter rose to 12 1/8 percent in December. In 1981, the rate experienced a rising trend and peaked at 15 1/4 percent in October, falling to 12 1/2 percent for December.

**Table I.**—Interest rates on special issues purchased monthly by the Social Security trust funds from January 1951 to December 1981

| Month | Rate (percent) | | | | | | | |
|---|---|---|---|---|---|---|---|---|

# Economic Forecasting: Effect of Errors on OASDI Fund Ratios

by Dwight K. Bartlett, III and Joseph A. Applebaum*

A broad range of economic assumptions are used to project the future income and outgo of the Social Security system. The assumptions adopted by the Board of Trustees of the Old-Age and Survivors Insurance and Disability Insurance (OASDI) Trust Fund were rather consistently on the optimistic side of the actual experience that emerged. This article examines the experience of several key economic indicators during the 1970's. Acknowledging that forecasting such quantities is an inexact science at best, the authors present a formula for making estimates of OASDI fund ratios, given the necessary assumptions. The formula is used to project fund ratios from 1981 to 1986. It shows where the fund would stand if forecasting errors were to continue at the magnitudes experienced in 1970–76.

This article analyzes the effects of deviations of actual economic experience from that assumed in making financial projections for the Old-Age and Survivors Insurance and Disability Insurance (OASDI) program. This analysis may be useful to policymakers in making judgments about desirable fund levels and the choice of economic assumptions for alternative projections. It focuses on the OASDI fund ratio—that is, the assets for the two trust funds (OASI and DI) combined at the beginning of a calendar year as a percentage of anticipated expenditures in that year. The fund ratio serves as a convenient, albeit crude, measure of short-range financial stability. In particular, it has been stated that a fund ratio of approximately 9 percent is needed to assure that the current monthly benefits will be paid on time and that a fund ratio of at least 20 percent would be needed to avoid risking cash flow problems due to cyclical fluctuations in the program and its economic environment.

The financial condition of the Social Security system is getting considerable attention. The principal reason for this is that since calendar year 1975, OASDI disbursements have exceeded income in every year. This trend is projected to continue for a few more years.

The OASDI program is financed essentially on a pay-as-you-go basis with the trust funds serving primarily as contingency reserves. In earlier times, when the fund ratio was higher, there was greater capacity for the program to withstand financial adversity. However, with the OASDI fund ratio standing at below 20 percent in early 1981, such safety margins no longer exist. In fact, current projections show that without corrective legislative action it is a virtual certainty that the trust funds will be depleted in late 1982.

## Projections and Levels of Economic Activity

Many variables affect the short-range financial operations of the OASDI program. However, short-term behavior is most strongly influenced by those variables relating to levels of economic activity such as increases in the Consumer Price Index (CPI) that result in automatic adjustments in benefits, changes in average annual wages for workers in OASDI-covered employment, and the average unemployment rate. These variables interact subtly. For example, average annual wages are linked to employment levels. In contrast to more stable and predictable variables such as mortality, disability, and retirement rates, these economic variables do not exhibit the same type of gradual and discernible long-term trends. It is now widely recognized that forecasting economic variables, even over short time periods, is likely to produce significant forecasting errors.

---

* Office of the Actuary, Social Security Administration. This article is adapted from Actuarial Note 109, by Dwight K. Bartlett, III and Joseph A. Applebaum, September 1981. Mr. Bartlett was Chief Actuary of the Social Security Administration from 1979 to 1981. He is now Executive Vice President for the National Health and Welfare Mutual Insurance Company.

The annual reports of the Board of Trustees of the Federal Old-Age and Survivors Insurance and Disability Insurance Trust Funds have included three sets of financial projections to indicate future income and outgo of the Social Security system under a broad range of economic assumptions.[1] One set of assumptions is designated as optimistic, another pessimistic, and the third intermediate. The particular sets of assumptions are so characterized depending on whether they have a favorable or unfavorable effect on the estimated financial status of the trust funds. The intermediate assumptions and the projections based thereon are intended to be best estimates. The three sets of assumptions and projections together indicate a range of costs under reasonable conditions, and thus are indicators of future financial stability. There cannot, of course, be assurance that costs will actually fall within the range of the projections for any year or period of years.

It should be noted that little discussion to date has been given to setting standards for determining what is a proper spread between the optimistic and intermediate sets of assumptions, or between the intermediate and pessimistic. In recent years, it has also become apparent that greater consideration should be given to short-term economic assumptions and their relationship with OASDI financing. Some questions might include the following:

> Can or should the pessimistic set of assumptions be established with the expectation that actual economic experience will be more favorable with some level of confidence?
>
> Should the optimistic set be similarly established?
>
> Should financing of the system be set so that the system will not require additional financing over some minimum period of years even under economic experience significantly more adverse than assumed in the intermediate set?

In testing alternative sets of assumptions, it is convenient to have a short-cut method of approximating the fund ratios without preparing a full-scale projection based on all the essential parameters. The formula presented in this article could be used as such a short-cut method. One should recognize that alternative assumptions may affect the individual trust funds (for OASI and DI) in slightly different ways. One should also recognize that other variables—for example, disability incidence rates and rates of retirement—are subject to forecasting error that can also affect OASDI fund ratios, although probably to a lesser extent in the short range than the key economic variables. Furthermore, levels of economic activity may have secondary effects upon those other variables. Therefore, the suggested formula should be regarded as a way of computing a first approximation to the actual change in fund ratio. The formula has been used here to analyze the effect on the OASDI fund ratio of past forecasting errors in the principal economic variables for the intermediate set of assumptions. (A forecasting error is the difference between the actual value of a variable and the value assumed for it in a particular projection.) These "errors" are, of course, an inherent part of forecasting, and the use of the term is not meant to imply mistakes or oversights.

## Estimating Fund Ratios

The preparation of the projected OASDI fund ratios under alternative assumptions as to the economic variables used in this analysis was facilitated by use of the following approximation.

Let $F_n^a$ be the fund ratio at the beginning of year n + 1 under the alternative set of economic assumptions a, and let $DF_n^{a,b}$ be the difference in trust fund ratios at the beginning of year n + 1 between alternative sets of economic assumptions a and b.
Clearly,

$$DF_n^{a,b} = F_n^a - F_n^b.$$

The auxiliary function $B_t^x$ is defined as:

$$B_t^x = W_t^x - 0.5\,(A_{t-1}^x + A_t^x) - 1.3\,(U_t^x - U_{t-1}^x),$$

where $W_t^x$ is the change in average annual covered wages in percent in year t under set x of economic assumptions; $A_t^x$ is the percent change in benefits due to an automatic increase in year t; and $U_t^x$ is the average rate of unemployment in year t. Then,

$$\sum_{t=1}^{n} (n - t + 1)(B_t^a - B_t^b)$$

provides a reasonable estimate of $DF_n^{a,b}$.

> The principal assumptions in this approximation are:
>
> The benefits, benefit formula, and taxable wages are indexed as in present law;
> annual expenditures and income are in approximate balance;
> there is a 30-percent excess effect on covered payroll due to changes in unemployment; and,
> the interest rate applicable to the trust fund equals the growth in expenditures.

Examination of this formula makes clear the sensitivity of the fund ratios to small changes in the economic variables. Let it be assumed, for example, that two alternative sets of economic assumptions are identical with the single exception that the first year's projected change in nominal wages is 1 percentage point greater in set a than set b. In this case,

---

[1] Five sets of short-range economic assumptions were indicated in the 1981 OASDI report.

$$B_t^a - B_t^b = 0, \text{ if } t > 1, \text{ and}$$

$$B_1^a - B_1^b = W_1^a - W_1^b = 1,$$

therefore,

$$DF_n^{a,b} = n.$$

The reasonableness of this result may be seen in the following way: Since outgo will be identical under both sets and since income under a will be 1 percent higher in each year, the fund ratio at the beginning of the second year of the projection under a is 1 percentage point higher, 2 percentage points higher at the beginning of the third year, and so forth. This seemingly minor difference will thus snowball into a fund ratio higher by 5 percentage points after 5 years, not a small change in a period when trust fund exhaustion is imminent in the absence of corrective legislation.

## Forecasting Errors

Table 1 shows for each calendar year from 1970 through 1980 the actual values for the following variables: Increase in the implicit gross national product (GNP) price deflator, increase in the CPI, increase in average annual wages in covered employment, real wage differential, and average rate of unemployment. Table 1 also shows for calendar years 1975 through 1980 the automatic OASDI benefit increases that have become effective due to changes in the CPI.

Table 2 shows the intermediate set of assumptions for three key economic variables for each of the first 5 projection years (but not past 1980) in each Trustees Report from 1970 to 1979, inclusive.

Table 3 shows for the first 5 years of the projections the forecasting errors—the differences between actual and assumed experience—in each Trustees Report from 1970 to 1976, inclusive, for three key economic variables.

**Table 1.**—Actual values for key economic variables, calendar years 1970–80[1]

[In percent]

| Year | Increase in GNP price deflator | Automatic benefit increase | Increase in CPI | Increase in average wages in covered employment | Real wage differential | Average unemployment rate |
|---|---|---|---|---|---|---|
| 1970.... | 5.4 | ... | 5.9 | 4.9 | −1.0 | 4.9 |
| 1971.... | 5.0 | ... | 4.3 | 4.9 | .6 | 5.9 |
| 1972.... | 4.2 | ... | 3.3 | 7.3 | 4.0 | 5.6 |
| 1973.... | 5.7 | ... | 6.2 | 6.9 | .7 | 4.9 |
| 1974.... | 8.7 | ... | 11.0 | 7.4 | −3.6 | 5.6 |
| 1975.... | 9.3 | 8.0 | 9.1 | 6.6 | −2.5 | 8.5 |
| 1976.... | 5.2 | 6.4 | 5.8 | 7.9 | 2.1 | 7.7 |
| 1977.... | 5.8 | 5.9 | 6.5 | 7.3 | .8 | 7.0 |
| 1978.... | 7.3 | 6.5 | 7.6 | 8.0 | .4 | 6.0 |
| 1979.... | 8.5 | 9.9 | 11.3 | 9.3 | −2.0 | 5.8 |
| 1980.... | 9.0 | 14.3 | 13.5 | [2] 8.5 | [2] −5.0 | 7.2 |

[1] Increase is with respect to prior year.

[2] Estimated.

[1] Effective starting 1975, based on changes in the Consumer Price Index.

[2] Figures opposite 1970 report represent increase in the implicit GNP price deflator; figures shown opposite the 1971–74 reports represent CPI increases.

These forecasting errors will be used to develop alternative sets of assumptions as described later. Before 1975, there were no automatic increases in Social Security benefits. Thus, the reports of 1970–74 did not make a projection of the automatic benefit increase, but instead projected price increases, either through increases in the GNP price deflator (1970 report), or increases in the CPI (1971–74 reports). It is believed, however, that, based on these variables, the forecasting error of the 1970 report for GNP deflator and the forecasting errors of the 1971-74 reports for increases in CPI reflect the forecasting errors that would have been made if projections of the increase in the first quarter average CPI (the measure by which benefits are now automatically adjusted) had been made. One should, of course, recognize that the 1970-74 reports were done in an era when OASDI operations were not tied by statute to inflation and so their predictions were of less consequence.

One should exercise caution in trying to give a probabilistic interpretation to these past errors, since the probability distribution of the different variables is not known. It is noteworthy that errors in the 1970's were consistently on the optimistic side. Nevertheless, an analysis of past forecasting errors should provide some useful indication of the range of deviations in OASDI fund ratios that might be expected in the future due to errors in forecasting of economic variables. Of particular interest is the range of the fund ratios that are likely in the first 5 years of a projection, based on intermediate assumptions.

**Table 3.**—Forecasting errors for key economic variables in 1970-79 Trustees Reports

[In percent]

| Year of report | Year of projection: Current | 2nd | 3rd | 4th | 5th |
|---|---|---|---|---|---|
| | Inflation rate or automatic benefit increase [1] | | | | |
| 1970 | 0.4 | 1.1 | 1.5 | 1.3 | 3.3 |
| 1971 | 0 | 0 | −.2 | 3.1 | 8.2 |
| 1972 | 0 | .2 | 3.3 | 8.2 | 6.4 |
| 1973 | 0 | 1.7 | 8.0 | 6.3 | 3.0 |
| 1974 | 0 | 1.9 | 3.4 | 1.3 | 3.3 |
| 1975 | 0 | −.2 | −.5 | .2 | 5.1 |
| 1976 | 0 | 0 | .5 | 4.1 | 9.1 |
| 1977 | 0 | 1.0 | 4.7 | 9.3 | ... |
| 1978 | 0 | 3.8 | 8.4 | ... | ... |
| 1979 | .1 | 6.5 | ... | ... | ... |
| | Increase in average annual wages in covered employment [2] | | | | |
| 1970 | −0.6 | −0.3 | 2.9 | 2.5 | 3.0 |
| 1971 | −1.1 | −.9 | .8 | 1.9 | 1.4 |
| 1972 | 1.3 | 1.1 | 1.4 | 1.1 | 2.8 |
| 1973 | −.2 | .5 | .3 | 2.7 | 2.1 |
| 1974 | −.5 | −1.9 | −.1 | −.3 | 2.5 |
| 1975 | .4 | −1.1 | −3.7 | −.8 | 1.6 |
| 1976 | .2 | −1.2 | −1.4 | .8 | .8 |
| 1977 | −1.1 | −.1 | 1.5 | 1.4 | ... |
| 1978 | .8 | 1.4 | .6 | ... | ... |
| 1979 | 1.0 | .5 | ... | ... | ... |
| | Average unemployment rate [3] | | | | |
| 1970 | 0.7 | 1.7 | 1.6 | 0.9 | 1.6 |
| 1971 | .7 | 1.2 | .9 | 1.6 | 4.5 |
| 1972 | .1 | −.1 | 1.4 | 4.5 | 3.7 |

| 1975 | −.3 | −.3 | 0 | −.2 | .4 |
| 1976 | 0 | .1 | −.6 | −.4 | 1.5 |
| 1977 | −.1 | −.3 | .1 | 2.0 | ... |
| 1978 | −.3 | −.1 | 1.8 | ... | ... |
| 1979 | −.2 | 1.0 | ... | ... | ... |

[1] Numbers reflect the difference between actual experience and what the intermediate set assumed as shown in tables 1 and 2, respectively. Numbers shown for 1970 report are the difference between actual and assumed percentage increases in the GNP price deflator. For the 1971-74 reports the numbers are the difference between actual and assumed percentage increases in the CPI. A positive number indicates an underestimate of the inflation rate or an automatic benefit increase.

[2] Numbers reflect the difference between actual experience and what the intermediate set assumed as shown in tables 1 and 2, respectively. A positive number indicates an underestimate of the increase in average annual covered wages.

[3] Numbers reflect the difference between actual experience and what the intermediate set assumed as shown in tables 1 and 2, respectively. A positive number indicates an underestimate of the unemployment rate.

## Effect of Repeating Forecasting Errors

Table 4 shows the key economic variables for the intermediate (II-B) and pessimistic sets of assumptions in the 1981 Trustees Report. It also shows the projected OASDI fund ratio for these two sets of assumptions at the beginning of each calendar year from 1981 through 1986.

Table 5 shows seven alternative sets of short-range assumptions for the key economic variables. Each of these alternative sets is obtained by modifying the 1981 intermediate (II-B) set by introducing the forecasting errors shown in table 3 for each Trustees Report from 1970 through 1976. Thus, the "1971" modification changes each value from the 1981 intermediate (II-B) set by adding the corresponding forecasting error from the 1971 Trustees Report according to the number of years projected into the future (duration).

Table 5 also shows OASDI fund ratios for 1981 through 1986 for each of these alternative sets. These figures represent the approximate OASDI fund ratio that would result if the specified economic assumptions were realized, and all other assumptions in the 1981 intermediate (II-B) set were also realized.

Chart 1 displays the formula differences in OASDI

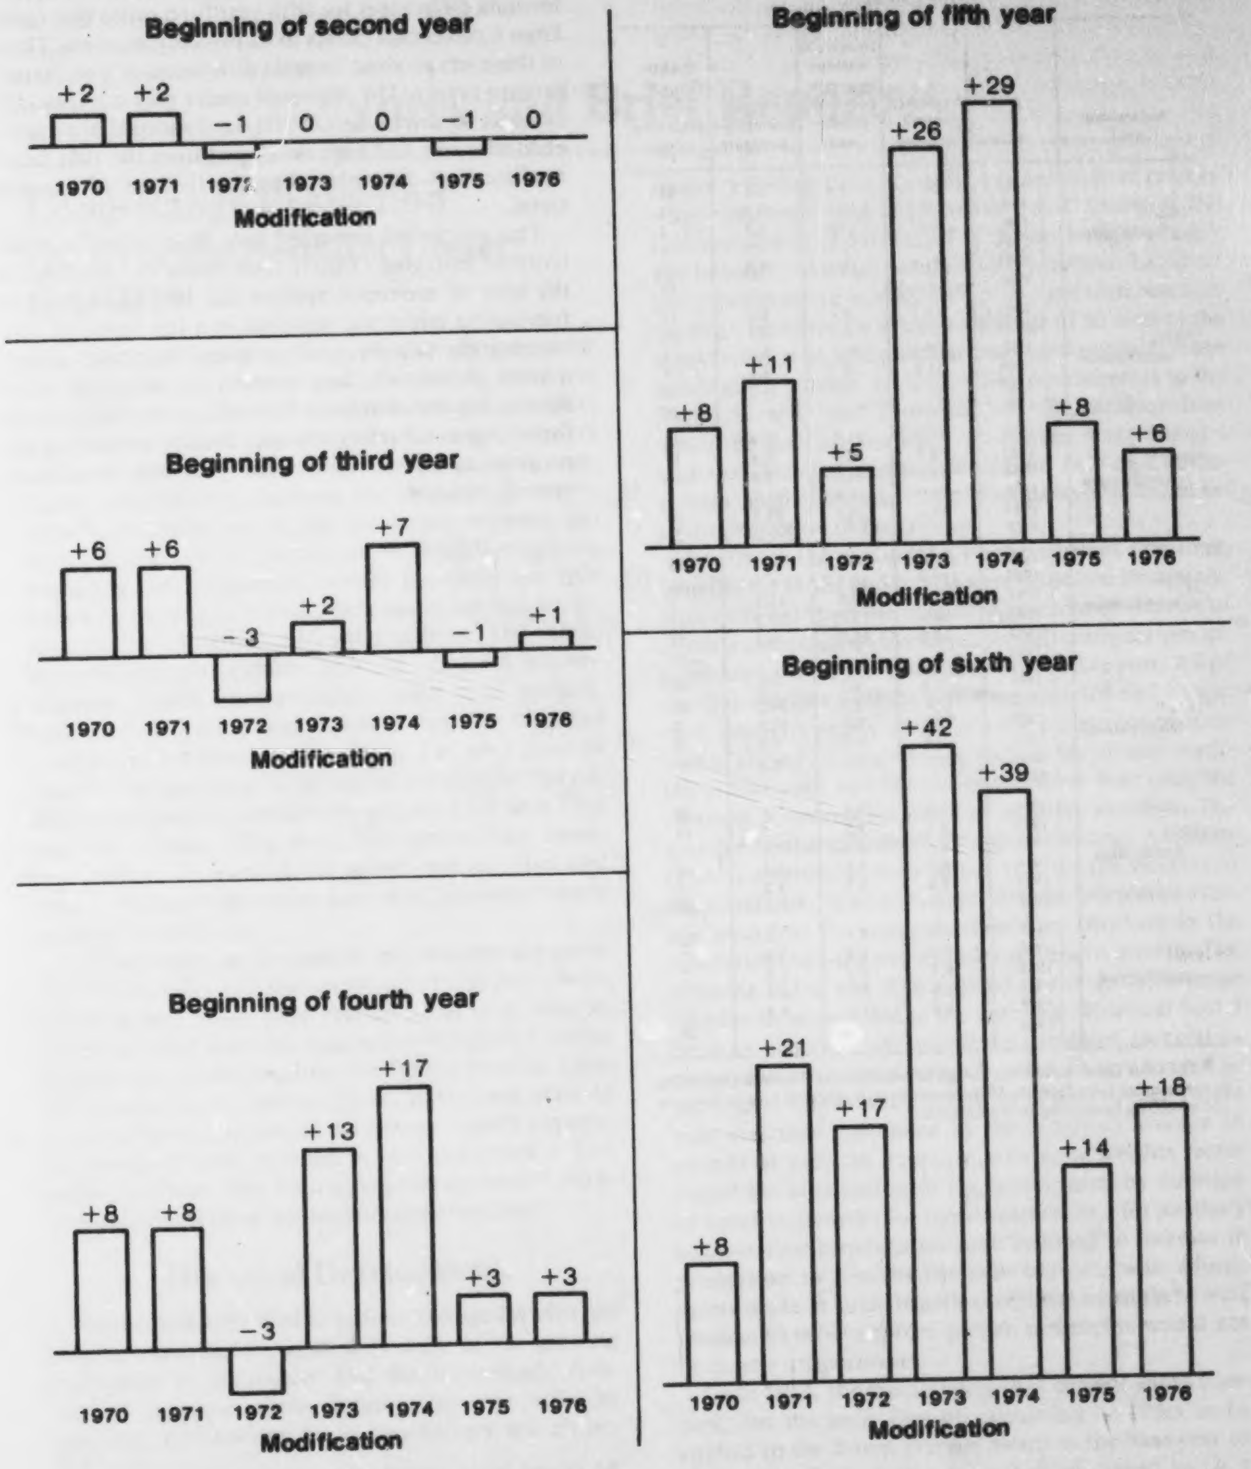
**Table 4.**—Short-range economic assumptions in 1981 and projected OASDI fund ratios

[In percent]

| Assumption set | Year | Automatic benefit increase | Increase in average wages in covered employment | Average unemployment rate | OASDI fund ratio at beginning of year |
|---|---|---|---|---|---|
| Intermediate (II-B) | 1981 | 11.2 | 10.2 | 7.8 | 18 |
| | 1982 | 9.7 | 9.6 | 7.5 | 13 |
| | 1983 | 9.2 | 9.7 | 7.2 | 7 |
| | 1984 | 8.5 | 8.8 | 7.0 | 2 |
| | 1985 | 7.7 | 8.1 | 6.8 | −5 |
| | 1986 | ... | ... | ... | −8 |
| Pessimistic | 1981 | 11.2 | 11.5 | 7.9 | 18 |
| | 1982 | 13.4 | 10.9 | 8.0 | 13 |
| | 1983 | 11.4 | 11.1 | 8.8 | 7 |
| | 1984 | 11.0 | 11.4 | 7.9 | −2 |
| | 1985 | 10.1 | 10.1 | 7.4 | −12 |
| | 1986 | ... | ... | ... | −17 |

**Chart 1.—Differences in projected OASDI fund ratios based on alternative assumptions of table 5**

[Intermediate estimate minus alternative estimate of fund ratio in percentage points]



fund ratios produced by the forecasting errors of the Trustees Reports of 1970 through 1976. As shown, the forecasting errors of those sets of assumptions produce formula differences for fifth year fund ratios that range from 8 percentage points to 42 percentage points. Three of these sets produce formula differences of over 20 percentage points. The interested reader may use these differences to determine OASDI fund ratios if alternative economic sets had been developed from the 1981 intermediate II-A set rather than the II-B set of assumptions.

This article has presented data illustrating the sensitivity of emerging OASDI fund ratios to variations in the level of economic activity and how the effects of forecasting errors will snowball in a few years. In considering the adequacy of program financing, policymakers should take into account the extent to which forecasting errors require financing plans that provide for a degree of safety margin, thereby permitting the program to operate in an orderly manner despite adverse experience.

Table 5.—Alternatives to short-range intermediate (II-B) economic assumptions based on 1970-76 forecasting errors and projected OASDI fund ratios

[In percent]

| Assumption set [1] | Year | Automatic benefit increase | Increase in average wages in covered employment | Average unemployment rate | OASDI fund ratio at beginning of year |
|---|---|---|---|---|---|
| "1970" modification | 1981 . . | 11.6 | 9.6 | 8.5 | 18 |

| | 1985 . . | 16.8 | 8.9 | 8.3 | -12 |
| | 1986 . . | . . . | . . . | . . . | -26 |

[1] The value for a variable in a particular modification is obtained by adding to the assumed value from the 1981 intermediate (II-B) set of assumptions, the corresponding forecasting error from table 3.

# Notes and Brief Reports

## Long-Range Projection Of Average Benefits Under OASDI*

In its long-range projections of expenditures under the Old-Age, Survivors, and Disability Insurance (OASDI) system, the Office of the Actuary considers benefit payments, administrative expenses, net transfers under the Railroad Retirement interchange, and vocational rehabilitation expenses for the next 75 years. Benefit payments are by far the largest element, accounting for over 97 percent of all OASDI outgo. In preparing the projections, benefit payments are split primarily by type of benefit, such as old-age and auxiliary benefits (retired worker, wife/husband, and child), survivors benefits (widow/widower, disabled widow/widower, child, mother/father, and aged parent), and disabled-worker and auxiliary benefits (disabled worker, wife/husband, and child). For each type of benefit, the number of beneficiaries and the corresponding average benefit payable are projected for each fifth year for 75 years. (The short-range projections, covering the first 10 years of the period, are not discussed here.) This note describes how the "average benefit payable" is projected.

It is important to distinguish between average newly awarded benefits and average benefits being paid. Benefits being paid in any given year are made up of benefits awarded in that year (the prospective beneficiary having applied and met the requirements for the benefit), benefits awarded in the previous year, in the year prior to that, and so on. To project the average benefit payable, the average benefit awarded in each prior year is first projected. From these figures, the average benefit payable is calculated using a procedure described later.

### Historical Development

The methodology used to project average benefits has become increasingly complex, because of the growing availability of computers and the increasingly complicated questions about future costs that must be answered. (Of course, these two factors are closely related.) Before 1970, dynamic factors such as average wage increases and Consumer Price Index (CPI) increases were not considered in the projection of average benefits. Average benefits were projected based on two representative earnings histories, one with constant earnings equal to the average earnings of all men in the most recent year, and a similar one based on the average earnings for women. In 1972, when Amendments to the Social Security Act provided that the earnings base would be tied automatically to average wage changes and that benefit increases would be tied to CPI increases, such economic factors had to be introduced into the projection of benefits.

Briefly, in the methodology established at that time, benefits for OASI and for DI were projected separately, with each based on the projected earnings of a series of cohorts consisting of five hypothetical steady earners assumed to be awarded benefits in each future year. All of the five workers in these sets were assumed to be men; each worker's yearly earnings were a constant proportion of the actual or projected average for all men working in that year; and the five proportions were designed to cover a reasonable range of possible earnings. The average of the calculated Primary Insurance Amounts (PIA's) awarded in each future year (to the workers in the simulation) was compared with the calculated average award in the base year (again, to workers in the simulation) to compute an index of benefit growth. The resulting index was then applied to the actual average benefits to be awarded in the base year (to actual Social Security beneficiaries, not to the simulated earners) to obtain the projected average benefits to be awarded in the future. The average benefit to be paid in each future year was then calculated as the weighted average of awards of previous years, in which the weights represented the distribution of the beneficiaries by duration of benefits. Benefits for female earners and for auxiliary and survivor beneficiaries were assumed to increase in proportion to benefits for male earners, with adjustments made in some benefit categories when there were reasons to believe future growth in benefits would not be exactly proportional.

Since 1972, the methodology has become more complex, but the basic idea of calculating an index to be applied to the actual average award in the base year to obtain awards in future years has continued to be a fundamental part of the projection procedure. A number of significant improvements have been made, however, primarily in the development of the cohorts of simulated workers. The number of earners in the simulation model was increased, first to 100 and later to 200 per cohort, for both the OASI and DI models, to improve the resolving power of the procedure. Nonsteady earnings histories were substituted for the steady ones in order to reflect more accurately the effects of the lengthening computation period. The nonsteady earnings histories included both years of zero earnings and fluctuations in nonzero earnings, in which the probability of a year of zero earnings depended on the existence or nonexistence of a neighboring year of zero earnings. Assumed earnings above the earnings base were also projected, to allow better estimates of the effect of changing the base.

---

*By Steven F. McKay, Office of the Actuary, Social Security Administration. This note was originally published as Actuarial Note No. 108, September 1981.

The most recent revision of this methodology, described below, further increases the size of the cohorts and attempts to refine some of the characteristics of the workers in them. There is now little room left for expansion of the sample because of the computer time required to perform the projection. Since time is often critical when responding to questions, a timely but less-accurate response is generally preferable to a more accurate but delayed response. Future improvements are expected to be either minor or else at the expense of some other parts of the methodology, until new computer capabilities allow more significant changes.

## Basic Sample of Earnings Histories

The current projection methodology uses an actual sample of earnings histories as a basis for the projected cohorts of workers. The first step in the construction of this sample was the extraction of a subsample of records from the Continuous Work History Sample (CWHS).[1] The CWHS is a 1-percent sample of all persons, living or deceased, with Social Security numbers; thus, it contains records for more than 2 million persons. The subsample drawn for the awards projection consists of all persons in the CWHS who were not receiving OASDI benefits at the end of 1976 but were receiving benefits (aged worker, disabled worker, or survivor) at the end of 1977. This sample was reduced to 7 percent of the original 1 percent (in other words, to a 0.07 percent sample) to have a more manageable number of beneficiaries. Dependents of retired and disabled workers are not included in the subsample because their benefits are assumed to be proportional to those of the primary beneficiaries. The "raw" subsample as drawn from the CWHS includes records on 1,378 beneficiaries, of whom 851 are aged workers (503 men and 348 women), 326 are disabled workers (243 men and 83 women), and 201 are survivors (174 receiving benefits based on earnings of men and 27 based on earnings of women). For each beneficiary, information available from the CWHS includes PIA and benefit amount in December 1977, cumulative 1937-50 earnings and year-by-year 1951-77 earnings from the associated earnings record, sex, date of birth, first year of eligibility, and other benefit information.

The raw subsample is drawn from a sample of beneficiaries and therefore is not representative of the population as a whole. If, during the projection period, the composition of the group of beneficiaries should change significantly as compared with the population as a whole, considering only a 1977 sample could give misleading results. For example, the percentage of all women with enough earnings to be eligible for aged worker benefits is projected to rise by approximately 50 percent in the future, while that for men is projected to remain about constant. If the average benefits of the "newly eligible" women should differ significantly from those for women already insured, the average overall benefits of women would be affected. Therefore, it is important for the sample to include persons who were not insured in 1977 so that the projections for future years would include the "newly eligible" workers. Thus, the next step in constructing the basic sample was to complete the raw subsample of aged beneficiaries to make it more representative of the population as a whole. This was not done for disabled workers, due to the slower growth projected in the percentage of female workers receiving disability insurance and to the complexity of the task. It was also not done for survivors, since, as noted below, the survivor portion of the basic sample is not currently being used in the long-range projection.

Two additions were made to the raw subsample of aged workers to complete it. First, persons with some earnings, but not enough to be insured for retired worker benefits (fully-insured status), and persons of retirement age in 1977 were added to the sample. For this purpose, a subsample was drawn from the Current Population Survey-Internal Revenue Service-Social Security Administration (CPS-IRS-SSA) Exact Match File[2] of 200 such persons aged 62-65. Of the 200 records drawn, 174 represent women and 26 represent men. Second, 111 theoretical records for persons with no earnings, all assumed to be age 62, were added to the sample. Of the 111 records added, 106 represent women and 5 represent men. As a result, the basic sample includes, in addition to the records of disability and survivor beneficiaries unchanged from the raw subsample, a total of 1,162 records of retired workers, of which 534 represent men and 628 represent women.

---

## Projection of the Basic Sample

Once the basic sample was constructed, a similar sample was developed for each single year in the projection period up to 1990, and quinquennially thereafter to the end of the projection period (1995 to 2055). For each such year, the number of earners in the sample is the same as in the basic sample, and the age and sex characteristics remain the same for each earner, but the earnings have been updated to represent those of beneficiaries being awarded benefits in that year. The updating of the earnings was done in two parts: first, for years of award up to 2000, and second, for years of award from 2005 onward.

As the year of award moves from 1977 to 2000, the length of the earnings record of each earner increases. For instance, a retiree aged 65 in 1977 has year-by-year earnings in the basic sample from 1951 to 1977, representing earnings from age 39 to age 65; his or her prior earnings were simply aggregated in the pre-1951 total. The parallel retiree in the projected sample for the year 2000 would have to be assigned earnings for each year from 1951 to 2000, representing earnings from age 16 to age 65. To accomplish the lengthening of the year-by-year earnings record while retaining as many as possible of the characteristics of the earner in the basic sample, the year-by-year earnings record was expanded by duplicating some randomly selected years of earnings; however, earnings near the time of retirement were not considered in the random selection for duplication because, for many purposes, the exact pattern of earnings before retirement is important. Earnings records of awardees under age 48 in 1977 (disability and survivor cases) were not expanded because, in general, they had no pre-1951 earnings and had a full earnings record by 1977. In all cases, the year-by-year earnings in the projected earnings records were adjusted, after any expansion of the earnings record, to reflect the past or assumed future increases in average wages.

Before expansion of the earnings record could be accomplished, some other problems had to be resolved. The first relates to the basic sample including only earnings up to the earnings base. Because of the ad hoc increases in the earnings base included in the 1977 Amendments to the Social Security Act, and because of the automatic adjustment mechanism, the base is estimated to be higher during the projection period than during 1951–77 (after adjustment for inflation). Thus, it was necessary to approximate earnings over the earnings base for the year-by-year earnings in the basic sample. This approximation was accomplished with a random selection procedure, using a statistical distribution of earnings in excess of the earnings base provided by the Social Security Administration's Office of Research and Statistics. Second, the lump-sum total of earnings before 1951 had to be projected to future years of award. Such total earnings were projected to decrease linearly, by year of award, to zero by 1990, or by an earlier year if the earner in the basic sample were younger than age 62.

By the year 2000, the earnings records in all cases were assumed to cover a full working life. The year 2000 projection was taken as a starting point for projections after that year, with the level of earnings adjusted to reflect assumed future increases in average wages.

The earnings for each calendar year in the constructed samples were further adjusted to reflect the overall projected changes in rates of participation for men and women in Social Security covered employment, in fully insured rates, and in earnings differentials. In general, earnings levels of women were increased and earnings levels of men were slightly decreased to narrow, but not to eliminate, the differential in earnings between the sexes. Some of the years with no earnings were randomly selected to become years with positive earnings on earnings records of women to produce increasing overall rates of participation in Social Security covered employment and increasing fully insured rates for women in the constructed samples.

Adjustments were also made to account for year-by-year earnings not being available before 1951, thus the expansion of the earnings records from the basic sample was performed on the basis of earnings at ages 35 and above (no retiree in 1977 could be younger than age 35 in 1951). Earnings, in general, are lower at the younger ages, even after accounting for general wage increases; therefore, adjustments were necessary as earnings were projected for younger persons to assure that the overall average coverage rates and the resulting earnings levels were reasonable.

## Calculated Amounts

For each constructed sample, the operations of the OASDI system were simulated to calculate the benefit payable for each earnings record in the sample. Benefits in future years depend on a number of variables that, in turn, depend on changes in the CPI and on changes in average wages. Annual benefit increases for those on the rolls and those eligible for benefits, and for the special minimum PIA's generally equal annual increases in the CPI. The PIA formula bend points, the wage-indexing amount, the earnings base, and the amount required for a quarter of coverage are all tied to changes in the average wage.[3] Table 1 presents the average wage and CPI increase assumptions from the 1981 OASDI Trustees Report [4] for the four long-range sets of assumptions. Based on those assumptions, the necessary program variables were projected.

**Table 1.**—Assumed benefit increase and annual change in average wages, by alternative sets of assumptions [1]

| Year | Benefit increase (in percent) | | | | Change in average wages (in percent) | | | |
|---|---|---|---|---|---|---|---|---|
| | Alternative I | Alternative II-A | Alternative II-B | Alternative III | Alternative I | Alternative II-A | Alternative II-B | Alternative III |
| 1981 | 11.2 | 11.2 | 11.2 | 11.2 | 10.64 | 10.22 | 10.23 | 11.49 |
| 1982 | 8.9 | 9.3 | 9.7 | 13.4 | 9.57 | 9.78 | 9.59 | 10.91 |
| 1983 | 7.2 | 6.6 | 9.2 | 11.4 | 9.08 | 8.64 | 9.73 | 11.11 |
| 1984 | 5.5 | 5.8 | 8.5 | 11.0 | 7.64 | 7.90 | 8.80 | 11.43 |
| 1985 | 4.5 | 4.9 | 7.7 | 10.1 | 6.77 | 7.10 | 8.11 | 10.07 |
| 1986 | 3.6 | 5.5 | 6.9 | 9.2 | 6.15 | 6.96 | 7.31 | 9.31 |
| 1987 | ... | 4.0 | 6.1 | 8.8 | 5.52 | 6.63 | 6.79 | 9.20 |
| 1988 | 4.9 | 3.5 | 5.3 | 8.3 | 5.08 | 5.72 | 6.17 | 9.98 |
| 1989 | (2) | 3.0 | 4.5 | 8.0 | 4.85 | 5.20 | 5.47 | 8.56 |
| 1990 | 4.0 | 3.0 | 4.0 | 7.5 | 4.63 | 5.10 | 5.39 | 8.20 |
| 1991 | 2.0 | 3.0 | 4.0 | 7.1 | 4.50 | 5.00 | 5.50 | 7.90 |
| 1992 | 2.0 | 3.0 | 4.0 | 6.7 | 4.50 | 5.00 | 5.50 | 7.60 |
| 1993 | 2.0 | 3.0 | 4.0 | 6.3 | 4.50 | 5.00 | 5.50 | 7.20 |
| 1994 | 2.0 | 3.0 | 4.0 | 5.9 | 4.50 | 5.00 | 5.50 | 6.80 |
| 1995 | 2.0 | 3.0 | 4.0 | 5.5 | 4.50 | 5.00 | 5.50 | 6.40 |
| 1996 | 2.0 | 3.0 | 4.0 | 5.1 | 4.50 | 5.00 | 5.50 | 6.00 |
| 1997 and later | 2.0 | 3.0 | 4.0 | 5.0 | 4.50 | 5.00 | 5.50 | 6.00 |

[1] From the 1981 OASDI Trustees Report.

[2] By law, automatic benefit increases that would be less than 3 percent do not go into effect; instead, they are combined with the succeeding years increases until there is a combined increase of at least 3 percent. This facet of the law was modeled through 1990; thus, there are no benefit increases in 1987 and 1989, and the 1988 and 1990 increases each represent 2 years of benefit increases. Beginning in 1991, the 3-percent trigger was ignored.

Note: Alternative I is the most optimistic alternative in terms of its economic and demographic assumptions and its net effect on the status of the trust funds; Alternative III is the most pessimistic. Alternatives II-A and II-B are intermediate assumptions; they share the same demographic assumptions, but Alternative II-A assumes more robust economic performance.

In the simulation for each constructed sample, the earnings in each earnings record were checked to see if they were sufficient to produce the insured status necessary for the type of benefit applicable to that record. (Fully insured status is required for retirement benefits, fully or currently insured status for young survivor benefits, fully insured status for aged survivor benefits, and fully and disability insured status for disability benefits. The three insured statuses require a varying number of quarters of coverage, in which quarters of coverage are earned in each year with covered earnings. Before 1978, one quarter of coverage was credited for each calendar quarter in which $50 of wages was paid. Beginning in 1978, quarters of coverage are credited on an annual basis. Currently, one quarter of coverage is credited for each $340 of annual earnings in 1982, up to a maximum of four quarters of coverage. Fully insured status requires one quarter of coverage for each year after the later of 1950 or the year of attainment of age 21, and before the earliest of the year of attainment of age 62, disability, or death, with a minimum of six quarters required. The quarters of coverage can be earned at any time. Currently insured status requires six quarters earned in the preceding 13 quarters. Disability insured status requires 20 quarters earned in the preceding 40 quarters, or one-half the quarters in a progressively shorter period at ages under 31.) The year-by-year earnings in each record were compared with the yearly quarter of coverage amount to compute the yearly quarters of coverage earned, and the appropriate insured status test was applied.

If the insured status was met, the PIA was computed for that earnings record. Under the normal PIA computation procedure,[5] an average of a specified number of highest years of indexed earnings is computed and designated the Average Indexed Monthly Earnings (AIME). The number of years of earnings required depends on the year of eligibility of the earner. For retirees, the year of eligibility is the year of attainment of age 62; for disabled workers, it is the year of disability onset. In either case, the year of eligibility must be before or the same as the year of award. For constructed samples, the year of eligibility for each record was assumed to precede the year of award by the same number of years that eligibility preceded award in the parallel record in the basic sample.

Once the AIME for each record was computed, the applicable PIA formula (including benefit increases after eligibility) was applied to produce the PIA at award. In all cases, the special minimum PIA was calculated, and, if greater, it became the PIA at award. In some cases, other PIA calculation methods were considered. If there were any earnings before 1950, the 1977 simplified old-start PIA was considered. (The 1977 simplified old-start PIA is derived from the benefit formula in the 1939 Act. In this method, an average monthly earnings figure is computed using earnings back to 1937, and a benefit formula is used to calculate an intermediate benefit amount. Finally, a conversion table incorporated in the current PIA table is used to determine the actual PIA.) If eligibility was before 1979, the PIA was calculated by pre-1977 law methods. If a retiree in a constructed sample was born between 1917 and 1921, the transitional guarantee PIA was calculated. (The transitional guarantee PIA method is similar to the pre-1977 law PIA table method. Two differences serve to limit the amount of the transitional guarantee PIA: (1) earnings in and after the year of attainment of age 62 cannot be used in the calculation of the average monthly earnings figure, and (2) benefit increases are not applied to the December 1978 PIA table for years before the year of attainment of age 62.) In each case, the highest applicable PIA became the PIA at award.

McKay, **Computing a PIA after the 1977 Amendments** (Actuarial Note No. 100), Office of the Actuary, Social Security Administration, February 1980; and Steven F. McKay and Bruce D. Schobel, **Effects of the Various Social Security Benefit Computation Procedures** (Actuarial Study No. 86), Office of the Actuary, Social Security Administration, July 1981.

## Average Awards and Benefits

Once the PIA's were calculated for each record in each constructed sample, the weighted average PIA's were found for each of the following four groups: Male retired workers, female retired workers, male disabled workers, and female disabled workers. Because the categories were already arranged by sex, the weights attempted to adjust the average awards in future years for changing age distributions at the time of award. For retirees, the age cells considered went by a single year, from age 62 to age 69, with a final cell for ages 70 and over. For disabled workers the age cells went by 5-year age groups, from ages 25–29 to ages 60–64, with a beginning cell for those under age 25. Average awards were found for each age cell, and then average awards over all ages were found by applying the weights projected for the category of beneficiary and the appropriate year of award.

The indexes of awarded-benefit growth were established for each of the four groups of beneficiaries by comparing the average award computed for each constructed sample after 1980 to the corresponding average award for the 1980 constructed sample. Applying these indexes to the actual 1980 average award produced the projected average awards. Table 2 summarizes the results that were obtained under Alternative II-B assumptions from the 1981 OASDI Trustees Report.[6]

The next step was to calculate the average benefit being paid to all beneficiaries of the four beneficiary groups in each calendar year, given the average benefit of newly awarded beneficiaries. Again, weighted averages were calculated; in this case, the weights were projected distributions of beneficiaries in each future year by years elapsed since award. The weights for each year were applied to the average awards of previous years, brought forward by any intervening general benefit increases, increased slightly due to earnings after retirement and to differential mortality, and summed. Table

**Table 2.—Past and projected average annual benefits [1] awarded to new retired-worker beneficiaries and disabled-worker beneficiaries, by sex**

| Calendar year | Retired workers | | Disabled workers | |
|---|---|---|---|---|
| | Men | Women | Men | Women |
| 1960 ........ | $1,104 | $759 | $1,128 | $947 |
| 1965 ........ | 1,249 | 918 | 1,264 | 1,034 |

Note: The average annual benefits exclude retroactive payments and payments attributable to dual entitlement to a secondary benefit.

---

[6] **1981 Annual Report of the Board of Trustees of the Federal Old-Age and Survivors Insurance and Disability Insurance Trust Fund,** op. cit.

3 summarizes the results obtained under the Alternative II–B assumptions.

The final step was to calculate the average benefit being paid to the remaining beneficiary groups. Benefits to auxiliary beneficiaries (wives, husbands, and children) of retired workers were assumed to increase at the same rate as for the category of retired worker on whose record the benefit would be payable. Benefits to survivors of male or female deceased workers (widows, widowers, children, and parents) were also assumed to increase at the same rate as for the corresponding category of retired worker. Benefits to some dually entitled beneficiaries (entitled to both retired-worker and wife/husband benefits, or retired-worker and widow/widower benefits), however, were adjusted to account for the complex interaction of projected changes in the distributions of benefits to men and women by size of PIA. Average benefits to auxiliary beneficiaries of disabled workers were related to the benefits of the corresponding disabled workers, but adjustments were made to account for the prospective effects (assuming a base year of 1980) of the 1980 Disability Amendments that changed the rules for computing the maximum family benefit in disability cases.

## Comparison of Alternative Assumptions

Average benefits to be awarded and paid in future years are projected to vary significantly, depending on the assumptions. Tables 4 and 5 summarize the average awards and benefits paid, respectively, under all four sets of long-range assumptions in the 1981 Trustees Report. Besides the economic assumptions shown in table 1, the figures in tables 4 and 5 depend on varying assumptions regarding mortality, fertility, and disability incidence rates, and other factors. For more information on the assumptions, methodology, and results of the long-range cost estimates, see the 1981 Trustees Report.[7]

**Table 4.**—Projected average benefits awarded to new retired-worker beneficiaries and disabled-worker beneficiaries, by sex and alternative set of assumptions [1]

| Calendar year | Retired workers | | Disabled workers | |
|---|---|---|---|---|
| | Men | Women | Men | Women |
| | Alternative I | | | |
| 1980 | $5,097 | $3,311 | $5,291 | $3,653 |
| 1990 | 8,521 | 5,236 | 9,858 | 6,309 |
| 2000 | 13,022 | 7,954 | 15,744 | 9,842 |

## Consumer Price Indexes for the Elderly: British Experience[*]

Legislation enacted in 1972 introduced an automatic benefit increase provision into the Old-Age, Survivors, and Disability Insurance (OASDI) program of the United States.[1] Present law calls for the adjustment of benefits for those already on the rolls to keep pace with inflation whenever the Consumer Price Index (CPI) rises by 3 percent or more from the first quarter of one year to the first quarter of the next year.

For some time, the question of whether the CPI is the appropriate measure for computing cost-of-living adjustments to benefits has stirred lively debate in the United States. On one hand, it is argued that the present CPI—developed to track movements in the economy as a whole—understates the rise in the cost of living for the elderly because of the differences in consumption habits of the elderly and the younger population. The former allocate a greater proportion of their budget to food, medical care, and utilities than do the latter. The rapid rise in prices of these types of goods and services presumably has led to an erosion of the elderly's benefit-purchasing power in the 1970's.

On the other hand, the CPI is believed to overstate the effects of inflation on the elderly because of its sensitivity to home purchase costs and to mortgage interest rates. Since the elderly do not purchase homes as often as the average consumer, some believe that benefit increases might have been higher than actually required to keep up with the true cost of living for Social Security beneficiaries.

The National Commission on Social Security, in its final report (1981), recommended continuing research to determine how a special index to measure price changes for the elderly might be constructed and subsequently used in indexing all Social Security benefits.[2] The creation of a special index would address the above questions by taking into account the particular expenditure patterns of older individuals.

In light of the National Commission's recommendations, this note assesses the experience of one European country in operating special consumer price indexes for the elderly in addition to the general consumer price index.[3] The United Kingdom produces two special indexes to monitor the impact of inflation on the purchasing power of one- and two-person elderly pensioner households. The indexes are, however, not used to adjust social security benefits for inflation.

In the United Kingdom, information collected through a continuing consumer spending survey helps ensure that all three indexes reflect recent expenditure patterns of the various groups. Health care expenditures are not considered in any of the British indexes since the national health insurance program provides health services with little out-of-pocket expense. Unlike the general index, the special pensioner indexes do not track price rises in housing because of problems in estimating housing costs for the elderly, many of whom receive housing subsidies.

This study shows roughly parallel movement in 1970–80 between the general index, excluding housing, and the special pensioner indexes, with the pensioner indexes advancing though at a slightly faster pace. During this decade, the one- and two-person pensioner indexes increased at average annual rates of 14.2 percent and 14.1 percent, respectively, compared with 13.7 percent for the general index.[4] The chief reason for this trend is that the sharpest price rises have occurred in the index categories of food and utilities, areas in which pensioners in the United Kingdom spend proportionately more of their consumption budget than does the general population.

### General Price Index

The United Kingdom has collected retail price data on a continuous basis since 1914, when the official "Cost of Living Index" was introduced. Its objective was to measure movements in the cost of maintaining the pre-1914 living standard of a worker with a family.

The present general consumer price index—known officially as the General Index of Retail Prices and started after World War II—relates to the expenditure practices of most households.[5] This index tracks the monthly movements in the general level of retail prices. Because the index is so broadly based, it has come to serve as a general measure of domestic price inflation.

For the final report of the National Commission, see **Social Security in America's Future,** Office of Public Information, Social Security Administration, March 1981.

[3] Although the Federal Republic of Germany also produces a special consumer price index for retired persons, data constraints do not presently permit an evaluation of that country's experience with such an index.

[4] In this note, average annual rates of change for a period of years are expressed as the arithmetic mean of the annual rates of exchange.

[5] See "The unstatistical reader's guide to the Retail Prices Index," **Department of Employment Gazette**, Department of Employment, United Kingdom, vol. 83, No. 10, October 1975, pages 971–978, for a complete discussion of the construction of this index.

### General Index Households

The index is aimed at reflecting the average spending pattern of the great majority of British households, including those of virtually all wage earners and most salary earners. Consequently, the consumption patterns of those at the upper and lower ends of the income scale are excluded—pensioners of at least retirement age (65 for men; and 60, for women) with limited means and households with before-tax income above a specified limit. The former represents about 12 percent of British households; the latter, 3-4 percent. These consumers are excluded because their spending behavior differs significantly from that of most British households.

### Price Indicators and Index Weights

Items priced in the market basket are most regular goods and services people in the United Kingdom buy, such as food, clothes, housing, utilities, household goods, transportation, and services. (Medical care expenditures do not figure in this shopping basket.)[6] Also omitted are various forms of savings, insurance premiums, and income taxes.

The price of each item included is "weighted" so that the monthly movement in the index reflects the correct relative importance of each article in the market basket. The use of weights, based on recent findings from a continuing consumer survey of the index households, is a key feature of the price index.[7] Most weights assigned are based on consumer survey expenditure data recorded continuously over a 1-year period, ending in June before the year in question. By picking up this recent information, the index is better able to account for continuous changes in consumer buying habits, usually by reducing purchases of items for which prices increase rapidly, and replacing the items, if possible, with less costly choices.

## Pensioner Price Indexes

The need to monitor personal spending patterns and effects of inflation on older pensioners led to the construction of two special consumer retail price indexes in 1968.[8] The first index was to cover "one-person" pensioner households, the second, "two-person" pensioner households.

The intent was not to tie adjustments in pension levels to movements in the special indexes but to obtain knowledge about the impact of inflation on older pensioners' purchasing power comparable to that obtained for population groups considered in the general index. The patterns reflected in the pensioner and general price indexes are of considerable importance to the national government in policy formulation—for example, on changes in benefit programs or in tax structure. Other primary users of this information include local governments, market research firms, employers, trade unions, and researchers.

### Pensioner Index Houeholds

In these indexes, pensioner households are defined as household units in which at least 75 percent of total income comes from national old-age and similar pensions or allowances, including benefits paid in addition to, or in place of, such pensions. Benefits counted as income for this purpose, other than old-age pensions, are general disability and war-related disability pensions and their supplements, as well as unemployment, cash sickness, and work-injury benefits.

By definition, therefore, most households in which a retired person receives a sizable private pension or earns a considerable amount of money are not covered by these indexes. The consumption patterns of pensioners who are members of households otherwise covered by the general index and whose standard of living depends on the income of the household and not on the pension level *per se* are reflected in the weights of the general index.

Besides meeting the income requirements described above, the head of the household, if a man, must be aged 65 or over, or if a woman, at least aged 60. These age limits correspond to the statutory retirement ages under the British old-age pension program. In this way, persons who have stopped working primarily because of age and whose chief income source is from the government can be identified.

[6] For an outline of the health insurance and other social security programs in the United Kingdom, see **Social Security Programs Throughout the World, 1979** (Research Report No. 54), Office of Research and Statistics, Office of Policy, Social Security Administration, 1980.

[7] In 1953-54, a large-scale Household Expenditure Enquiry was conducted to find out how people actually spend their money. This was followed by the Family Expenditure Survey (FES) carried out continuously since 1957, though on a somewhat smaller scale, to monitor the spending patterns of a sample of households. (Presently cooperating are approximately 7,000 households geographically distributed throughout the United Kingdom.) For a description of the FES, see "Family Expenditure: A plain man's guide to the Family Expenditure Survey," **Department of Employment Gazette**, Department of Employment, United Kingdom, vol. 86, No. 2, February 1978, pages 137-147.

[8] The construction of these indexes followed a recommendation of the Retail Prices Advisory Committee—a group of representatives from trade unions, consumer and trade groups, academicians, and statisticians from the Department of Employment and other governmental departments. See **A Report of the Cost of Living Advisory Committee, United Kingdom**, Cmnd. 3677, HMSO, 1968.

## Price Indicators and Index Weights

As indicated, older pensioners with limited means fall outside the scope of index households of the general index on the grounds that their consumption habits vary considerably from that of the general population. The drop in income and the change in life styles brought about by retirement leads to differences in spending practices.

To cope with the lower income, pensioners may adjust their expenditures downward and possibly do without certain less-essential purchases or substitute lower-priced items. This situation is especially acute for the pensioner in the United Kingdom, due to the modest earnings replacement rates of old-age benefits.[9] A greater proportion of their consumption budgets, therefore, tend to be allocated to basics such as food and utilities. Though increased consumption of medical care is associated with old-age, pensioners in the United Kingdom do not generally pay for such services, as pointed out. The change of living associated with retirement also leads to spending modifications; for example, transportation costs would likely be reduced since work commuting is no longer required. Furthermore, child-rearing expenditures may have diminished considerably or be nonexistent for older pensioners whose children have become independent.

Consequently, the pensioner's market baskets of goods and services are made up of articles on which they spend their money. The pensioner indexes, unlike the general index, do not cover housing, as pointed out earlier. (Many pensioners receive a means-tested allowance, live in low-cost municipal housing, or may have paid off their mortgages.) Interestingly, the pensioners' indexes give consideration to collecting prices for smaller sizes of canned or packaged foods and also for prepared meals.[10]

Each article included in the pensioners' indexes is weighted to reflect its relative importance. The major reason for differences in weights between the two types of pensioner households is that differences in the expenditure patterns become more pronounced where there is only one household member.

The weights are revised each January based on the consumption pattern of pensioner households that participated in the consumer spending survey in the 3 years ending in June prior to the January date of revision. The market basket is revalued at the prices obtained at the revision date. This method of revision differs from that of the general index, in which weights are revised on the basis of spending behavior of cooperating households during a single year ending the June before the revision date.

Table 1 compares the 1981 weighting patterns assigned to basic categories of goods and services, excluding housing, purchased by one- and two-person pensioner households and by general index households. (Though housing is included as a price indicator for the general index, the United Kingdom constructs an index without this expenditure to permit comparisons between the three indexes.) The weights in the table reflect the purchasing patterns in the 3-year or 1-year periods ending June 1980 for pensioners and for general households, respectively, revalued at January 1981 prices.

The data in table 1 show the higher relative importance to retired persons than to general households of expenditures on food consumed at home and on utilities. When combined, these expenditures represented 55–60 percent of the pensioners' consumption budgets, but only about 30 percent of the general population's. Expenditures on items more responsive to declines in income or changes in life styles—such as restaurant meals, household furnishings, clothing, and transportation—comprised a smaller proportion of total expenditures for pensioners than for the general population. For all three household types, the proportions spent on tobacco, miscellaneous goods, and services were similar.

## Trends in Index Movements

During the past decade, movements in the general index and the special pensioner indexes have differed rela-

**Table 1.**—Index weights, by type of household, 1981

| Item | General price | One-person pensioner | Two-person pensioner |
|---|---|---|---|
| All items, excluding housing | 1,000 | 1,000 | 1,000 |
| Food | | | |
| At home | 239 | 389 | 389 |
| Away from home | 49 | 19 | 13 |
| Alcohol | 92 | 25 | 41 |
| Tobacco | 42 | 30 | 48 |
| Utilities | 71 | 207 | 161 |

| Transportation | 175 | 28 | 70 |
| Miscellaneous goods | 86 | 88 | 84 |
| Services | 77 | 101 | 75 |

Source: "Pensioner households RPI weights' revision," **Employment Gazette**, Department of Employment, United Kingdom, vol. 89, No. 4, April 1981, pages 182–183.

---

[9] A study of the earnings-replacement rate of old-age benefits in 12 industrialized countries found that the United Kingdom had the lowest replacement rate. In 1975, the social security old-age pension for a single man with average earnings in manufacturing amounted to 26 percent (39 percent for a married, aged couple) of earnings in the year before retirement. See Leif Haanes-Olsen, "Earnings-Replacement Rate for Old-Age Benefits, 1965–75, Selected Countries," **Social Security Bulletin**, January 1978, pages 3–14.

[10] For other distinctions between the various market baskets, see "Retail prices indices for one-person and two-person pensioner households," **Employment and Productivity Gazette**, Department of Employment, United Kingdom, vol. 77, No. 6, June 1969, pages 542–547.

tively little. This trend is especially interesting because the period covered was marked by rapid price rises, and the composition of items selected and their corresponding weights varied from one index to another.

As indicated, pensioners spend a much larger proportion of their budget on food and utilities than do the general index households, and they spend proportionately less on other categories. Consequently, food and utility price rises would have a much greater effect on pensioner households than on general households. For 1970–80, price rises in these two categories were substantial. The combination of heavy weights for food and utilities and their above-average price increases tended to pull the pensioner indexes up to the level of, and eventually to surpass, the general index.

Table 2 compares movements in the general index and the pensioner indexes. On the average, over the 10-year period ending with 1980, the two-person pensioner index increased at an annual rate of 14.1 percent, and the one-person pensioner index by 14.2 percent, compared with 13.7 percent for the general index.

In the long run, if allowances could have been made in the pensioners' indexes for housing, however, British planners believe the gap between the pensioner indexes and the general index would have been narrowed still further. The effect of housing allowances and subsidies that help cushion against the rise in housing costs is proportionately greater for pensioner households.

If movements from one year to the next are considered, however, the differences between the three indexes were frequently greater and not always in the same direction. For example, from 1973 to 1974 the pensioners' indexes rose 16.1 percent contrasted with a 16.7-percent rise in the general index. Over the following year, however, this particular pattern switched, with the general index registering a 25.0-percent increase and the one- and two-person pensioner indexes showing 25.8-percent and 25.3-percent gains, respectively.

**Table 2.**—Comparison of pensioners' indexes with the general price index (excluding housing), annual averages, 1970–80

[January 15, 1974 = 100]

| Year | General price | | One-person pensioner | | Two-person pensioner | |
|---|---|---|---|---|---|---|
| | Index | Annual percentage change | Index | Annual percentage change | Index | Annual percentage change |
| 1970 | 73.5 | .... | 71.1 | .... | 71.1 | .... |
| 1971 | 80.5 | 9.5 | 78.3 | 10.1 | 78.1 | 9.8 |
| 1972 | 85.8 | 6.6 | 84.3 | 7.7 | 83.9 | 7.4 |

| Average annual rate | .... | 13.7 | .... | 14.2 | .... | 14.1 |
| Average annual rate, 1977–80 | .... | 12.4 | .... | 12.1 | .... | 12.0 |

Sources: For 1970–74, **Employment Gazette**, Department of Employment, United Kingdom, vol. 83, No. 4, April 1975, page 382; for 1974–80 data, **Employment Gazette**, Department of Employment, United Kingdom, vol. 89, No. 3, March 1981, page S60.

Over the years 1970–80, the trend was generally for the pensioners' indexes to move at a slightly more rapid pace overall than the general index. The growth differential was reversed in the last 3 years of this time series, however, as annual percentage increases in the general index from 1977 through 1980 surpassed those in the pensioners' indexes. The average annual rate of increase for these years was 12.4 percent in the general index, but only 12.1 percent in the one-person and 12.0 percent in the two-person pensioner series.

The major reason for the recent trend reversal has been attributed to the slower rise in food prices as compared with prices in general (excluding housing). During the past few years, the slower acceleration in food prices tended to offset the rapid increase in utility prices. Because food and utility prices carry more weight in the pensioners' indexes, this offset has had the effect of slowing down those indexes relative to the general index.

## Value of Maintaining Pensioner Indexes

From the viewpoint of social security, the value or effectiveness of producing a separate retail price index for pensioners of limited income has been discussed in the United Kingdom. In some respects, these discussions are similar to those posed in the United States concerning the construction of a consumer price index around the purchasing patterns of the elderly.[11]

As indicated, the purpose of special pensioners' indexes was to monitor the impact of inflation on the purchasing power of elderly pensioner households with limited income. The indexes have been useful in this regard. Nevertheless, some persons in the United Kingdom argue that the pensioners' indexes have had no practical value since it is the general index—rather than either of the pensioners' indexes—that is used for social security benefit adjustments. At present, the old-age pension as well as other social security benefits are subject to an annual review to safeguard their value in relation to the general level of prices.[12] At the time of this review—usually in April—the government determines the amount of increase necessary to keep benefits in line with the cost of living. The increase would then be applied in November of that same year. This approach differs from that of the U.S. Social Security programs in which OASDI benefits in force are adjusted automatically on the basis of the CPI.

---

[11] For recent writings on this issue as it relates to the U.S. Social Security program, see **Social Security in America's Future**, op. cit.; and **Indexation of Federal Programs**, op. cit.

[12] A more detailed discussion of the British benefit adjustment process falls outside of the scope of this note. For further discussion of the procedure as well as the legislative changes that have occurred since the review process was initiated in 1971, see A. I. Ogus and E. M. Barendt, **The Law of Social Security**, Butterworths, London, 1978; and A. I. Ogus and E. M. Barendt, **The Law of Social Security: First Supplement**, Butterworths, London, 1979.

If the pensioner indexes were to be used to adjust old-age benefits, the question is whether these indexes, based on the consumption habits of elderly pensioners with limited means, would be appropriate for adjusting the levels of other social security benefits for price increases. Many persons receiving long-term social security benefits are younger persons who may either be disabled and getting disability pensions, or they are widows, widowers, or orphans drawing survivors' benefits. Information about their particular consumption patterns is very limited. The use of one type of indexing for old-age pensioners and a second type for other long-term beneficiaries is thought to be difficult and cumbersome, both administratively and technically.

Another problem with the pensioner indexes in the United Kingdom is that they do not adequately reflect the effect of inflation on the purchasing power of many old-age pensioners. By definition, the special price indexes for elderly pensioners include only those households that derive 75 percent of their income from social security benefits. Because private pensions are rather widespread,[13] and because beneficiaries might have other income sources, an estimated 50 percent of old-age social security pensioners are outside the definition. Another distortion comes from the exclusion of housing costs for the elderly pensioner from the special indexes, as explained earlier. Finally, and probably the most significant argument against basing benefits on the pensioners' index is that—as the British experience has shown—the use of the pensioners' indexes over the long run would result in relatively little difference to benefit rates. These three indexes (the general index, and the one- and two-person pensioners' indexes) behave quite similarly. Theoretically, they could be quite different, but experts do not anticipate that this will happen.

---

[1] Emergency relief funds of $1,630.3 million in 1940 total, not included elsewhere. Includes training allowances to unemployed workers under Area Redevelopment Act and Manpower Development and Training Act for 1961–75, not shown separately.

[2] Beginning December 1980, includes public assistance payment revisions for 1940–79.

[3] Retirement and survivor benefits beginning 1940; disability benefits beginning 1957. Beginning Oct. 1966, includes special benefits authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[4] Includes annuities to widows under joint-and-survivor election before 1947. Beginning Feb. 1967, includes supplemental annuities for career railroad employees.

[5] Excludes refunds of contributions to employees who leave service.

[6] Includes survivor annuities under joint-and-survivor elections before 1948.

[7] Represents Federal contributory systems other than civil service, Federal noncontributory systems for civilian employees and career military personnel, and systems for State and local government employees. Monthly data not available.

[8] Payments to veterans and survivors of deceased veterans, including special allowances for survivors of veterans who did not qualify under OASDHI (Servicemen's and Veterans' Survivor Benefit Act of 1956) and through June 1973, subsistence payments to disabled veterans undergoing training.

[9] Death payments.

[10] Includes annual and monthly data for railroad retirement, veterans' programs, and Federal civil service retirement. For "other" public employee systems, annual data only.

[11] Annual and monthly totals include regular State unemployment insurance program and payments made by States as agents of the Federal Government under the Federal employees' unemployment compensation program and under the Ex-Servicemen's Compensation Act of 1958. Annual data only for payments under Servicemen's Readjustment Act of 1944, Veterans' Readjustment Act of 1952, Trade Expansion Act of 1962, Disaster Relief Act of 1970, and the temporary and permanent extended unemployment insurance programs. Beginning 1961, includes program in Puerto Rico.

[12] Benefits in Rhode Island (from 1943), in California (from 1947), in New Jersey (from 1949), in New York (from 1950), in Puerto Rico (from 1970), including payments under private plans where applicable. Monthly data not available.

[13] Benefits began 1947.

[14] Under Federal workers' compensation laws and under State laws paid by private insurance carriers, State funds, and self-insurers. Beginning 1959, includes data for Alaska and Hawaii. Monthly data refer only to Federal "black lung" benefits administered by Social Security Administration (starting 1970).

[15] Includes aid to families with dependent children and general assistance. Through 1973 includes old-age assistance, aid to the blind, and aid to the permanently and totally disabled. Includes payments to intermediate-care facilities (July 1968–December 1971), and payments for emergency assistance, beginning July 1969. Includes money payments under medical assistance for the aged (1960–69). Excludes medical vendor payments. Starting 1974, includes money payments to the aged, blind, and disabled in Guam, Puerto Rico, and the Virgin Islands under federally aided public assistance programs.

[16] Supersedes the public assistance programs of old-age assistance, aid to the blind, and aid to the permanently and totally disabled in the 50 States and the District of Columbia, beginning 1974; beginning 1978, in the Northern Mariana Islands. Annual, but not monthly, totals include payments under State-administered supplementary programs.

[17] Data not available.

Source: Based on reports of administrative agencies on a checks-issued basis (including retroactive payments) where available. Data for public assistance and State unemployment insurance programs adjusted monthly, other data adjusted annually.

## Table M-2.—Public income-maintenance programs: Hospital and medical care payments, 1940–81

---

[1] Benefit expenditures from the Federal hospital insurance and supplementary medical insurance trust funds as reported by the U.S. Treasury.

[2] Excludes payments by Railroad Retirement Board for beneficiaries in Canadian hospitals.

[3] Benefits in California and New York (from 1950), including payments under private plans. Monthly data not available.

[4] Benefits under Federal workers' compensation laws and under State laws paid by private insurance carriers, State funds, and self-insurers. Beginning 1959, includes data for Alaska and Hawaii. Monthly data not available.

[5] Federal matching for medical vendor payments under public assistance began October 1950.

[6] Data not available.

Source: U.S. Treasury and unpublished data from administrative agencies.

## Table M-3.—Selected social insurance and related programs: Beneficiaries of cash payments, 1940–81

---

[1] Includes dependents.

[2] Beginning October 1966, includes special benefits authorized by 1966 legislation for persons aged 72 and over and not insured under the regular or transitional provisions of the Social Security Act.

[3] Monthly number at end of quarter.

[4] Average number during 14-day registration period.

[5] Average weekly number. Includes regular State unemployment insurance, the Federal employees' unemployment compensation program, and the ex-servicemen's compensation program.

[6] Includes dependents and survivors.

[7] Less than 500.

[8] Data not available.

Source: Based on reports of administrative agencies.

[1] Represents contributions of employees, and the self-employed in employments covered by OASDHI under the Social Security Act, on an estimated basis, with suitable subsequent adjustments. Data for earlier years reflect former appropriation bases. Includes deposits by States under voluntary coverage agreements. Employee-tax refunds deducted. Excludes transfer from general revenues.

[2] Excludes transfers between OASDHI system and railroad retirement account under the financial interchange provisions of the Railroad Retirement Act.

[3] Represents employee and Government contributions. Beginning 1968, also includes Foreign Service and contributory survivor programs for Federal judiciary and Tax Court. For civil service, employee share includes voluntary contributions to purchase additional annuity; government share includes Federal and District of Columbia agency contributions and, beginning 1968, Federal payment for current unfunded liability.

[4] Beginning 1959, net of tax refunds. Contributions for hospital insurance of railroad workers are collected and reported with railroad retirement contribution initially and are transferred once a year (usually in August) to the hospital insurance trust fund; data for that month only are adjusted by the Treasury source to reflect the transfer.

[5] Excludes reimbursement from Treasury general funds for cost of benefits for persons not insured for cash benefits under OASDHI or railroad retirement. Includes contributions for hospital insurance coverage of railroad workers (principal amount only), see footnote 4; and, beginning July 1973, premiums for voluntary coverage of uninsured individuals aged 65 and over.

[6] Through 1952 represents deposits in State clearing accounts of contributions plus penalties and interest collected from employers and contributions from employees (3 States in recent years), as reported by State agencies (to Department of Labor, 1950–52). Starting 1953, represents State deposits in (Federal) unemployment trust fund.

[7] Represents taxes paid by employers under the Federal Unemployment Tax Act. Beginning 1961, net of tax refunds. Includes tax proceeds for financing temporary extended unemployment compensation programs for 1958 and 1961. December 1976 figure includes treasury adjustments (minus) for misclassification of two prior month's taxes.

[8] Beginning 1947, also covers railroad temporary disability insurance.

[9] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (Oct. 1, 1976).

---

[1] Equals amounts appropriated (estimated tax collections, subsequently adjusted). Includes deposits by States under voluntary coverage agreements and deductions for refund of estimated employee-tax overpayment. Early years reflect former appropriation bases.

[2] From 1947 to 1951, for benefits with respect to certain World War II veterans. Beginning 1966, for military wage credits, and beginning Dec. 1968 for military credits and Federal payment for special age-72 benefits, see footnote 4.

[3] Includes interfund transfer of interest on reimbursed administrative expenses, 1958 to date (see footnote 6).

[4] Before deductions for (1) SMI premium payments and, when applicable, (2) recoupment of overpayments of hospital and medical service benefits provided to OASI beneficiaries. Includes special benefits for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[5] The purpose of the financial interchange provisions of the Railroad Retirement Act, as amended, is to place the trust funds in the same position in which they would have been had railroad employment always been covered under OASDHI. Negative figures represent transfers to OASI trust fund. Excludes transfers to HI trust fund for hospital insurance coverage of railroad workers (accounted for in table M–7).

[6] Beginning 1951, adjusted for reimbursement to trust fund of small amounts for gifts, sales, or services. Beginning 1953, includes expenses for central and regional office building construction. Except for reimbursements from the appropriate trust fund to Treasury Department for its expenses as incurred, beginning 1957 administrative expenses for OASI and DI were paid initially from OASI trust fund with subsequent reimbursement, plus interest (see footnote 3), from DI trust fund for allocated cost of DI operations. Beginning 1966, subject to subsequent adjustment among all four social security trust funds for allocated cost of each operation.

[7] Book value: includes net unamortized premium and discount, accrued interest purchased, and repayment of interest accrued on bonds at time of purchase.

[8] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[9] Reflects assets of predecessor fund, the old age reserve account, January 1937 December 1939.

[10] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (Oct. 1976).

[11] Public Law 96–403 approved October 9, 1980, provides for the reallocation of social security tax receipts between the OASI and DI trust funds for calendar years 1980–81. Transfers from the DI to the OASI fund were required to implement the change retroactive to January 1980. A $3-billion transfer in October 1980 represented the accumulated tax receipts, and a $121-million transfer in April 1981 was the interest earned on this amount.

[1] Equals amounts appropriated (estimated tax collections, subsequently adjusted). Includes deposits by States under voluntary coverage agreements and deductions for refund of estimated employee-tax overpayment. Early years reflect appropriation bases.

[2] Transfers (principal only) from the railroad retirement account with respect to contributions for disability insurance coverage of railroad workers.

[3] From 1950–51, for benefits with respect to certain World War II veterans. Beginning 1966, for military wage credits, and beginning Dec. 1968, for military credits and Federal payment for special age-72 benefits; see footnote 4.

[4] Includes interfund transfer of interest on reimbursed administrative expenses. 1958 to date (see footnote 6).

[5] Before deductions for (1) SMI premium payments and, when applicable, (2) recoupment of overpayments of hospital and medical service benefits provided to OASI beneficiaries. Includes special benefits for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[6] The purpose of the financial interchange provisions of the Railroad Retirement Act, as amended, is to place the trust funds in the same position in which they would have been had railroad employment always been covered under OASDHI. Negative figures represent transfers to OASI trust fund. Excludes transfers to HI trust fund for hospital insurance coverage of railroad workers (accounted for in table M-7).

[7] Beginning 1951, adjusted for reimbursement to trust fund of small amounts for gifts, sales, or services. Beginning 1953, includes expenses for central and regional office building construction. Except for reimbursements from the appropriate trust fund to Treasury Department for its expenses as incurred, beginning 1957 administrative expenses for OASI and DI were paid initially from OASI trust fund with subsequent reimbursement, plus interest (see footnote 3), from DI trust fund for allocated cost of DI operations. Beginning 1966, subject to subsequent adjustment among all 4 social security trust funds for allocated cost of each operation.

[8] Book value: includes net unamortized premium and discount, accrued interest purchased, and repayment of interest accrued on bonds at time of purchase.

[9] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[10] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (Oct. 1976).

[11] Public Law 96–403 approved October 9, 1980, provides for the reallocation of social security tax receipts between the OASI and DI trust funds for calendar years 1980–81. Transfers from the DI to the OASI fund were required to implement the change retroactive to January 1980. A $3-billion transfer in October 1980 represented the accumulated tax receipts, and a $121-million transfer in April 1981 was the interest earned on this amount.

[1] Represents amounts appropriated (estimated tax collections with suitable subsequent adjustments) after deductions for refund of estimated amount of employee-tax overpayment; and, beginning July 1973, premiums for coverage of uninsured individuals aged 65 and over.

[2] Transfers (principal only) from the railroad retirement account with respect to contributions for hospital insurance coverage of railroad workers.

[3] Represents Federal Government transfers from general funds appropriations to meet costs of benefits for persons not insured for cash benefits under OASDHI or railroad retirement and for costs of benefits arising from military wage credits.

[4] Interest and profit on investments after transfers of interest or reimbursed administrative expenses (see footnote 6) and interest on amounts transferred from railroad retirement account (see footnote 3).

[5] Represents (1) payment vouchers on letters of credit issued to fiscal intermediaries under sec. 1816 and (2) direct payments to providers of services under sec. 1815 of the Social Security Act.

[6] Subject to subsequent adjustment among all four social security trust funds for allocated cost of each operation. Fiscal year 1966 includes "tool-up" period from date of enactment of Social Security Amendments of 1965 (July 20).

[7] Book value: Includes net unamortized premium and discount, and, when applicable, accrued interest purchased and repayments on accounts of interest accrued on bonds at time of purchase.

[8] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[9] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (Oct. 1, 1976).

[1] Represents voluntary premium payments from and in behalf of the insured aged and (beginning July 1973) disabled.

[2] Represents Federal Government transfers from general funds appropriations to match aggregate premiums paid.

[3] Represents interest and profit on investments, after transfers of interest on reimbursed administrative expenses (see footnote 5).

[4] Represents payment vouchers on letters of credit issued to carriers under section 1842 of the Social Security Act.

[5] Subject to subsequent adjustment among all 4 social security trust funds for allocated cost of each operation. Fiscal year 1966 includes "tool-up" period from date of enactment of Social Security Amendments of 1965 (July 30).

[6] Book value: Includes net unamortized premium and discount, and, when applicable, accrued interest purchased and repayments on account of interest accrued on bonds at the time of purchase.

[7] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[8] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (Oct. 1, 1976).

---

[1] At the end of 1980 an estimated 40,000 Railroad Retirement beneficiaries would have been eligible for Social Security benefits had they applied. These persons receive their Social Security benefits as part of their Railroad Retirement annuity and are not included in the above tabulations. Of these 40,000 beneficiaries, 19,000 were retired workers, 5,500 were disabled workers, and 15,500 were spouses and children.

[2] Benefits paid from the OASI trust fund to retired workers and their spouses and children and to all survivors. Includes special benefits authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[3] Benefits paid from the DI trust fund to disabled workers and their spouses and children.

## Table M-10.—OASDI cash benefits: Number of monthly benefits in current-payment status for retired workers and their spouses and children and for survivors, 1940–81

[Data contain some duplication arising from dual entitlement; see the **1977–79 Annual Statistical Supplement**, p. 11]

| At end of selected month | Total | Retired workers [1] | Wives and husbands [1] [2] | Children [3] | Widowed mothers [4] | Widows and widowers [1] [5] | Parents [1] | Persons with special age-72 benefits [6] |

---

[1] Persons aged 65 and over (and aged 62–64, beginning 1956 for women and 1961 for men).

[2] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[5] Includes, beginning September 1965, widows aged 60–61 and entitled surviving divorced wives aged 60 and over; beginning March 1968, disabled widows aged 50–59 and disabled widowers aged 50–61; and, beginning January 1973, nondisabled widowers aged 60–61.

[6] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

## Table M-11.—OASDI cash benefits: Amount of monthly benefits in current-payment status for retired workers and their spouses and children and for survivors, 1940–81

[In thousands]

| At end of selected month | Total | Retired workers [1] | Wives and husbands [1] [2] | Children [3] | Widowed mothers [4] | Widows and widowers [1] [5] | Parents [1] | Persons with special age-72 benefits [6] |

[1] July 1957-October 1960, disabled workers aged 50-64; beginning November 1960, disabled workers under age 65.

[2] Mainly wives under age 65 with entitled children in their care.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18-21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] November data; December data not available

## Table M-13.—OASDI cash benefits: Average amount of monthly benefits, by type of beneficiary, 1940-81

| Period [1] | Retired workers and their spouses and children | | | Survivors of deceased workers | | | | Disabled workers and their spouses and children | | | Persons with special age-72 benefits [9] |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | Retired workers [2] | Wives and husbands [2 3] | Children [4] | Children [4] | Widowed mothers [5] | Widows and widowers [2 6] | Parents [2] | Disabled workers [7] | Wives and husbands [8] | Children [4] | |
| | **Average benefits in current-payment status at end of period** | | | | | | | | | | |
| 1940 | $22.60 | $12.13 | $9.70 | $12.22 | $19.61 | $20.28 | $13.09 | ...... | ...... | ...... | ...... |

[1] Some years shown in several parts because of amendments changing the benefit provisions.

[2] Persons aged 65 and over (and aged 62-64, beginning 1956 for women and 1961 for men).

[3] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[4] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18-21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[5] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[6] Includes, beginning September 1965, widows aged 60-61 and entitled surviving divorced wives aged 60 and over; beginning March 1968, disabled widows aged 50-59 and disabled widowers aged 50-61; and, beginning January 1973, nondisabled widowers aged 60-61.

[7] July 1957-October 1960, disabled workers aged 50-64; beginning November 1960, disabled workers under age 65.

[8] Includes wife beneficiaries under age 65 with entitled children in their care, and, beginning September 1965, entitled divorced wives.

[9] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

## Table M-14.—OASDI cash benefits: Estimated number of beneficiaries with monthly benefits in current-payment status, by age group and by type of benefit, 1940–81

[In thousands. Adjusted to exclude duplication arising from dual entitlement: See the **1977–79 Annual Statistical Supplement**, p. 11]

---

[1] At the end of 1980 an estimated 40,000 Railroad Retirement beneficiaries would have been eligible for Social Security benefits had they applied. These persons receive their Social Security benefits as part of their Railroad Retirement annuity and are not included in the above tabulations. Of these 40,000 beneficiaries, 19,000 were retired workers, 5,500 were disabled workers, and 15,500 were spouses and children.

[2] Includes spouses and children of disabled workers.

[3] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[4] Fewer than 500.

[5] November data; December data not available.

## Table M-15.—OASDI cash benefits: Number of monthly benefits awarded to retired workers and their spouses and children and to survivors, 1940–81

| Period | Total | Retired workers [1] | Wives and husbands [1] [2] | Children [3] | Widowed mothers [4] | Widows and widowers [1] [5] | Parents [1] | Persons with special age-72 benefits [6] |

---

[1] Persons aged 65 and over (and aged 62–64, beginning 1956 for women and 1961 for men).

[2] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[5] Includes, beginning September 1965, widows aged 60–61 and entitled surviving divorced wives, aged 60 and over; beginning March 1968, disabled widows aged 50–59 and disabled widowers aged 50–61; and, beginning January 1973, nondisabled widowers aged 60–61.

[6] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[7] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

[8] The June awards include only those with the new benefit rates.

## Table M-16.—OASDI cash benefits: Number of monthly benefits awarded to retired workers and their spouses, by payment status at time of award, 1950-81

[Number of awards in thousands]

| September | 95 | 75 | 79 | 20 | 15 | 75 |

[1] Includes awards currently payable and conditional or deferred awards. Conditional or deferred awards are those suspended immediately following determination, chiefly because of earnings of the beneficiary or the worker on whose account benefits are paid; since September 1965 most conditional and deferred awards have been made primarily for the purpose of assuring eligibility for hospital insurance benefits.

[2] Estimated on basis of awards for 10 months.

[3] Data not available.

[4] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

[5] The June awards include only those with the new benefit rates.

| September | 64,624 | 28,882 | 7,778 | 27,964 |

[1] July 1957–October 1960, disabled workers aged 50–64; beginning November 1960, disabled workers under age 65.

[2] Mainly wives under age 65 with entitled children in their care.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18-21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

[5] The June awards include only those with the new benefit rates.

**Table M-18.**—Supplemental security income for the aged, blind, and disabled: Number of persons receiving federally administered payments and total amount, by reason for eligibility, September 1981

| Reason for eligibility | All persons | Amounts of payments (in thousands) | | |
|---|---|---|---|---|
| | | Total | Federal SSI | State supplementation [1] |
| Total | 4,037,881 | $736,244 | $580,048 | $156,195 |
| Aged | 1,701,964 | 233,615 | 172,460 | 61,156 |
| Blind | [2] 78,371 | 17,951 | 13,048 | 4,903 |
| Disabled | [3] 2,257,546 | 484,678 | 394,541 | 90,137 |

[1] Excludes payments for State supplementation under State-administered programs.

[2] Includes approximately 25,000 persons aged 65 and over.

[3] Includes approximately 401,000 persons aged 65 and over.

**Table M-20.**—Supplemental security income for the aged, blind, and disabled: Number of persons initially awarded federally administered payments, by reason for eligibility, 1974–81

[1] Data reported to the Social Security Administration by individual States. All data subject to revision. Excludes data for optional programs in North Dakota.

[2] Includes data for some States not distributed by reason for eligibility.

[3] Represents March 1980 data for Alaska and May 1981 data for Minnesota; data not available for July 1981.

[4] Less than $500.

[5] Not computed on base of less than $500.

[6] Data not available.

[7] Includes data for the blind.

## Table M-27.—Supplemental security income for the aged, blind, and disabled: Number of persons receiving State-administered State supplementation only and total and average amount, by reason for eligibility and State, July 1981 [1]

| State | Number of persons | | | | Total amount (in thousands) | | | | Average payment | | | |

[1] Data reported to the Social Security Administration by individual States. All data subject to revision. Excludes data for mandatory and optional programs in New Hampshire, South Dakota, and Virginia; for optional programs in North Dakota.

[2] Includes data not distributed by reason for eligibility.

[3] Represents March 1980 data for Alaska and May 1981 data for Minnesota; data not available for July 1981.

[4] Less than $500.

[5] Not computed on base of less than $500.

[6] No persons receiving State supplementation only.

[7] Data not available.

## Table M-28.—Public assistance: Recipients and average monthly payments per recipient, by program, 1940–80

[Data subject to revision. Except for emergency assistance, excludes vendor payments for medical care and cases receiving only such payment]

---

[1] Represents data for payments to recipients of the specified type of assistance under separate programs and under the combined State adult assistance programs. Superseded by supplemental security income program in the 50 States and the District of Columbia, beginning January 1974.

[2] Beginning September 1965, excludes State blind pension program in Pennsylvania administered under State law without Federal participation.

[3] Includes as recipients the children and 1 or both parents or 1 caretaker relative other than a parent in families in which the requirements of such adults were considered in determining the amount of assistance.

[4] Data incomplete.

[5] Represents average per family. Beginning January 1972, includes New York City.

## Table M-29.—Public assistance: Total money payments, by program and emergency assistance, 1945-80

[1] Includes money payments for institutional services in intermediate-care facilities for 1968-71.

[2] Includes money payments for medical assistance for the aged for 1960-69.

[3] Superseded by supplemental security income program in the 50 States and the District of Columbia beginning 1974. Data for 1974 and thereafter are for only Guam, Puerto Rico, and the Virgin Islands.

[4] Money payments to families and medical vendor payments to needy families with children, authorized under title IV of the Social Security Act.

## Table M-30.—Public assistance: Total medical vendor payments, by program, 1951-78

[Data subject to revision]

| Period | Total amount of payments (in thousands) | | | | |
|---|---|---|---|---|---|
| | | Federally aided programs [1] | | | |

[1] Federal participation in medical vendor payments, beginning October 1950, was authorized by the social security amendments.

[2] Beginning Jan. 1970, medical assistance for the aged and medical vendor payments under the categorical programs were replaced by the medical assistance program. Beginning Jan. 1972, includes payments to intermediate-care facilities formerly listed separately in table M-29.

[3] Data incomplete.

[1] Case count may be inflated because States reporting identical number of cases and children may count each child in foster care as a family case.

[2] Data incomplete, see footnote 4.

[3] Data estimated.

[4] Data not reported.

[5] Not computed on base of fewer than 50 cases or children.

**Table M-34.**—Emergency assistance: [1] Families receiving assistance and amount of payments, by State, December 1980

| State | Number of families | | | Amount of payments | | | |
|---|---|---|---|---|---|---|---|
| | Total | AFDC cases | Other | Total | Average per family | Maintenance | Medical care |
| Total | 52,051 | 40,887 | 10,902 | $10,252,544 | $196.77 | [2] $9,764,650 | [2] $487,894 |

---

[1] Data not reported by some States because (1) programs are administered by townships and local areas and reports are not available, or (2) counties are unable to report on their State-assisted programs, or (3) program has been suspended. New Jersey data includes assistance under the "Insufficient Employment of Parents" program; Maryland data includes a State program of assistance to families with dependent children. In other States the program covers "home relief," "general welfare," "relief," etc.—State and local programs not federally aided.

[2] Data estimated.

[3] Not computed on base of fewer than 100 recipients.

[1] Benefits payable under the "black lung" program established by the Federal Coal Mine Health and Safety Act of 1969. The program is administered by the Social Security Administration but is financed from the general funds of the Treasury.

[2] Includes benefits for dependent wife and/or child.

[3] Includes benefits for dependent child of widow, surviving child, parent, brother, and sister.

## Table M-37.—Unemployment insurance: Selected data on State programs, 1940–81

[Excludes programs for Federal employees and for ex-servicemen; includes unemployment compensation for State and local government employees where covered by State law]

| Period | Average weekly insured employment [1] |  | Initial claims (weekly average) [4] | All types of compensated unemployment |  |  |  | Average weekly benefit for total unemployment [6] | Number of claimants exhausting benefits | Funds available for benefits end of period [7] (in thousands) |
|---|---|---|---|---|---|---|---|---|---|---|
|  | Number of workers [2] | Percent covered employment [3] |  | Number of first payments | Weeks compensated | Benefits paid [5] (in thousands) | Average weekly number of beneficiaries |  |  |  |
| 1940 | 1,282,385 | 5.6 | 214,231 | 5,220,073 | 51,084,375 | $518,700 | 982,392 | $10.56 | 2,596,129 | $1,817,108 |
| 1945 | 589,110 | 2.1 | 116,325 | 2,861,190 | 24,179,769 | 445,866 | 464,996 | 18.77 | 254,271 | 6,914,009 |
| 1950 | 1,503,164 | 4.6 | 235,590 | 5,211,883 | 67,859,529 | 1,373,114 | 1,304,991 | 20.76 | 1,853,336 | 6,972,295 |

[1] Beginning July 1963, includes Puerto Rican sugarcane workers' program.

[2] Workers reporting completion of at least 1 week of unemployment.

[3] Annual rates based on average covered employment in specified year; monthly rates on average for most recent 12-month period.

[4] Notices filed by workers to indicate they are starting periods of unemployment. Excludes transitional claims.

[5] Annual data, but not monthly, adjusted to exclude voided benefit checks and transfers under interstate combined-wage plan. Through 1970, includes payments under State (but not Federal) temporary extended unemployment insurance provisions; beginning 1971, excludes such payments.

[6] Includes dependents' allowances in States that provide such benefits.

[7] Sum of balances in State clearing accounts, benefit-payment accounts, and State accounts in Federal unemployment trust fund.

[8] Data not available.

Source: Department of Labor, Office of Administration and Management, based on data submitted by State agencies.

## Table M-38.—Unemployment insurance: Selected data by State, March 1981

[Excludes program for Federal employees and for ex-servicemen; includes unemployment compensation for State and local government employees where covered by State law]

| State | Average weekly insured unemployment | | Initial claims (weekly average) [3] | All types of compensated unemployment | | | | Average weekly benefit for total unemployment [5] | Number of claimants exhausting benefits |
|---|---|---|---|---|---|---|---|---|---|
| | Number of workers [1] | Percent covered employment [2] | | Number of first payments | Weeks compensated | Benefits paid [4] | Average weekly number of beneficiaries | | |
| Total | 3,381,589 | 3.9 | 380,671 | $715,461 | 13,503,852 | $1,393,611,692 | 3,069,057 | $105.66 | 290,104 |

---

[1] Workers reporting completing at least 1 week of unemployment.

[2] Based on average covered employment for most recent 12-month period.

[3] Notices filed by workers to indicate they are starting periods of unemployment. Excludes transitional claims.

[4] Voided benefit checks and transfers under interstate combined-wage plan not deducted. Excludes payments under temporary unemployment insurance provisions.

[5] Includes dependents in States that provide such benefits.

[6] Includes data under the Puerto Rican sugarcane workers' program for average insured unemployment and initial claims (sugarcane data not available for other items).

Source: Department of Labor, Office of Administration and Management, based on data submitted by State agencies.

## Table M-39.—Gross national product and personal income, by type, 1950-81

[Amounts in billions. Monthly amounts at annual rates. Before 1960, data for the 48 States and the District of Columbia, except where otherwise noted; beginning 1960, includes Alaska and Hawaii]

| Period | Gross national product [1] | Personal income | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | Total | Wage and salary disbursements [2] | Social insurance and related payments [3] | | Public assistance and related payments [4] | | Other income [5] | Less personal contributions for social insurance [6] |
| | | | | Amount | Percent of personal income | Amount | Percent of personal income | | |
| 1950 | $286.2 | $226.1 | $147.0 | $7.0 | 3.1 | $2.3 | 1.0 | $72.7 | $2.9 |

---

[1] Monthly data represents amount at annual rate.

[2] Includes payments in kind; includes pay of Federal civilian and military personnel in all areas.

[3] Includes government transfer payments to beneficiaries under OASDHI, railroad retirement, public employee retirement, unemployment insurance, MDTA training allowances, trade adjustment assistance, "black lung," and veterans' pensions and compensation programs; cash and medical payments under workers' compensation and temporary disability insurance; and court-awarded benefits for work injuries sustained by railroad, maritime, and other workers under Federal employer liability acts.

[4] Includes government transfer payments to recipients of direct relief under programs of old-age assistance, aid to families with dependent children, aid to the blind, aid to the permanently and totally disabled, and general assistance. Excludes payments made in behalf of recipient to suppliers of medical care (vendor payments). Beginning 1961, includes bonus velue of food stamps. Beginning 1974, includes supplemental security income payments.

[5] Includes proprietors' income, dividends, personal interest, and rental income; other transfer payments not enumerated in footnotes 2 and 3 (such as Government life insurance payments. World War bonus payments, mustering-out pay and terminal-leave benefits to discharged servicemen, subsistence allowances to veterans at school); and employer contribution to private pensions and welfare funds and other labor income (except compensation for injuries).

[6] Includes life insurance premium payments for veterans.

[7] Data revised March 1981.

Source: Department of Commerce, Bureau of Economic Analysis. Data regrouped to highlight items of special interest to the social security program.

[1] Includes Alaska and Hawaii for all years. Annual data are estimated as of July 1. Data not adjusted for errors of coverage and of age misreporting.

[2] Annual data are averages of monthly figures. Beginning 1960, includes Alaska and Hawaii. Data for 1950 and 1955 adjusted to reflect definitions adopted January 1957; two groups (those on temporary layoff and those waiting to start new wage and salary jobs within 30 days) formerly classified as employed—with a job, not at work—were assigned to other classifications, chiefly to the unemployed. Beginning 1962, comparability with previous years affected somewhat by the introduction of material from the 1960 Census (level of labor force and employment lowered by about 150,000). Before January 1967, series show aged 14 and over.

Source: Population data from Bureau of the Census, Department of Commerce. Labor-force data from Bureau of Labor Statistics, Department of Labor.

## Table M-41.—Consumer price index for urban and clerical workers, 1940-81[1]

[1967 = 100; yearly data are annual averages]

| Period | All items | All items less medical care | Medical care | Food | Apparel and upkeep | Housing | Transportation | Personal care | Reading and recreation | Other goods and services | All services |
|---|---|---|---|---|---|---|---|---|---|---|---|
| 1940 | 42.0 | ......... | 36.8 | 35.2 | 42.8 | 52.4 | 42.7 | 40.2 | 46.1 | 48.3 | 43.6 |
| 1945 | 53.9 | ......... | 42.1 | 50.7 | 61.5 | 59.1 | 47.8 | 55.1 | 62.4 | 56.9 | 48.7 |
| 1950 | 72.1 | ......... | 53.7 | 74.5 | 79.0 | 72.8 | 68.2 | 68.3 | 74.4 | 69.9 | 58.9 |

[1] Beginning January 1978, the Bureau of Labor Statistics introduced a new index for all urban consumers and a revised index for urban wage earners and clerical workers, both of which form a continuous series with the unrevised consumer price index, as of December 1977. For changes in titles of components and in definitions, see Bureau of Labor Statistics, **CPI Detailed Report, January 1978**, pp. 7–8.

[2] Consists of charges for semiprivate room; operating room; X-ray diagnostic series, upper G.I.; and the following ancillary services; physical therapy, oxygen, intravenous solution, electrocardiogram, antibiotic, tranquilizer, and laboratory tests.

[3] Includes charges to adult inpatients paying full rates for room and board, routine nursing care, and minor medical and surgical supplies.

## State of the Union Address

In his State of the Union address on January 26, President Reagan called for the transfer of $47 billion in Federal programs to the jurisdiction of State and local governments. Among other things, the proposal would give the States full responsibility for Aid to Families with Dependent Children and food stamps and the Federal Government full responsibility for the Medicaid program. Beginning in 1984, the President said

> . . . the Federal Government will assume full responsibility for the cost of the rapidly growing Medicaid program to go along with its existing responsibility for Medicare.
>
> As part of a financially equal swap, the States will simultaneously take full responsibility for Aid to Families with Dependent Children and food stamps. This will make welfare less costly and more responsive to genuine need because it will be designed and administered closer to the grassroots and the people it serves.
>
> In 1984, the Federal Government will apply the full proceeds from certain excise taxes to a grassroots trust fund that will belong, in fair shares, to the 50 States. The total amount flowing into this fund will be $28 billion a year.
>
> Over the next 4 years, the States can use this money in either of two ways. If they want to continue receiving Federal grants in such areas as transportation, education, and social services, they can use their trust fund money to pay for the grants or—to the extent they choose to forgo the Federal grant programs—they can use their trust fund money on their own, for those or other purposes.
>
> There will be a mandatory pass-through of part of these funds to local governments.
>
> By 1988, the States will be in complete control of over 40 Federal grant programs. The trust fund will start to phase out, eventually to disappear, and the excise taxes will be turned over to the States. They can then preserve, lower, or raise taxes on their own and fund and manage these programs as they see fit.

## Medicare Premium Changes

On July 1, 1982, the basic monthly premium for Supplementary Medical Insurance (SMI)—the part of Medicare that covers physicians' care and related medical services—will rise from $11.00 to $12.20. Under the Medicare law, this charge is adjusted annually, but cannot rise by more than the percentage increase in Social Security benefits during the previous year. In 1981, benefits increased by 11.2 percent.

On the same date, Medicare's Hospital Insurance (HI) premium for persons not otherwise entitled to that protection will rise from $89 to $113 monthly. Those who purchase HI coverage under this option are also required to enroll for SMI coverage.

## Program Operations

### OASDI Benefits

At the end of October 1981, the Old-Age, Survivors, and Disability Insurance (OASDI) program was paying $12.2 billion in monthly cash benefits to 35,904,374 beneficiaries—an increase of $1.5 billion in total monthly benefits payable and 350,000 in the number of beneficiaries since October 1980. The OASI program accounted for 93 percent of the rise in the amount of monthly benefits and 100 percent of the increase in the number of beneficiaries. Retired workers numbered 20,039,216, or 56 percent of the total number of OASDI beneficiaries.

During the 12-month period ended October 1981, the monthly amount of OASI and DI benefits rose 15 percent and 8 percent, respectively. The number of OASI beneficiaries increased 2 percent, while the number of DI beneficiaries decreased 4 percent.

| OASDI | October 1981 | September 1981 | October 1980 |
|---|---|---|---|
| **Monthly beneficiaries**, total (in thousands) | 35,904 | 35,833 | 35,554 |
| Aged 65 and over, total | 24,282 | 24,198 | 23,698 |
| Retired workers | 17,945 | 17,872 | 17,439 |
| Survivors and dependents | 6,258 | 6,246 | 6,164 |
| Special age-72 beneficiaries | 79 | 80 | 95 |
| Under age 65, total | 11,622 | 11,635 | 11,856 |
| Retired workers | 2,095 | 2,104 | 2,025 |
| Disabled workers | 2,796 | 2,805 | 2,861 |
| Survivors and dependents | 6,731 | 6,726 | 6,970 |
| **Total monthly benefits** (in millions) [1] | $12,183 | $12,139 | $10,634 |
| **Average benefit in current-payment status:** | | | |
| Retired workers | $385.04 | $384.46 | $340.26 |
| Disabled workers | 413.43 | 413.57 | 370.47 |
| Aged widows and widowers | 345.52 | 345.25 | 307.62 |
| Children of deceased workers | 270.69 | 269.99 | 239.26 |
| **Average benefits awarded:** | | | |
| Retired workers | $410.07 | $426.82 | $359.79 |
| Disabled workers | 424.09 | 424.18 | 396.17 |
| Aged widows and widowers | 340.33 | 337.64 | 303.42 |
| Children of deceased workers | 266.07 | 264.62 | 239.04 |

[1] In current-payment status; excludes lump-sum and retroactive payments and adjustments.

Average monthly benefit amounts payable at the end of October did not differ significantly from the September levels. The averages were $385.04 for retired workers and $413.43 for disabled workers.

The number of monthly cash benefits awarded in October 1981 reached 311,044. Eighty-seven percent of all awards and 81 percent of awards to retired workers were immediately payable. The average monthly benefit amounts for currently payable awards to retired workers and disabled workers were $374.82 and $424.55, respectively.

## SSI Payments

**Federally administered payments.** In October 1981, 4,030,100 persons received federally administered Supplemental Security Income (SSI) payments, a decline of nearly 7,800 from the September total. The number of disabled recipients increased by 1,800, while aged recipients decreased by 9,600. Among individual States, nine out of 51 reported an increase in their overall SSI caseload. The number of disabled recipients rose in 28 States, the blind in 22, and the aged in 4.

Federally administered payments in October totaled $743.7 million—a rise of $7.5 million from the previous month. This increase is a result of the adjustments made by Massachusetts and New Jersey to their State supplementation rates by the amount of the July 1981 Federal SSI increase, payable November 1 and retroactive to July. As a result of the increased rates, supplementation payments in Massachusetts were up by $5 million, and those for New Jersey rose by $3.4 million.

**State-administered supplementary payments.** During August 1981, the number of persons receiving State-administered supplementation declined slightly to 250,200. All three eligibility categories experienced small caseload reductions during the month. Despite this decline in the number of cases assisted, expenditures for State payments remained relatively stable at $19.3 million.

# Social Security Benefits of Female Retired Workers and Two-Worker Couples

by Barbara A. Lingg *

This article makes available for the first time actual program data on benefits of couples in which both spouses receive benefits as retired workers. Traditional data have always classified two retired workers married to each other as separate "worker-only" beneficiaries. In this study of 1976 data, however, the benefits of husbands and wives were linked. It was found that average benefits for all couples—those in which the wife received a benefit as a retired worker and those in which she received a benefit only as a spouse—were about 8 percent higher than the amount usually reported from administrative records. Average benefits for couples in which the wife received a retired-worker benefit were about 18 percent higher than those for couples in which she received only a spouse's benefit.

This article also examines the benefit levels and entitlement status of never-married, divorced, and widowed female retired workers according to their marital status. This information is likewise not routinely available from administrative records. Widows were about as likely as wives to be entitled only on the basis of their own earnings. Among all women, benefits were found to be highest for dually entitled widows and lowest for wives entitled only to a spouse's benefit.

This article provides data for the first time from benefit records on the marital status of female retired workers and on actual benefits for couples consisting of two retired workers. Basically, women aged 62 and older may receive Social Security benefits in one of three ways: [1]

- Solely as wives or widows of workers. The women in this category usually have not had enough covered employment to qualify for Social Security benefits as workers. They are classified as wives or widows of workers. Wives are potentially eligible for benefits equal to half their husband's age 65 benefit and widows are potentially eligible for a benefit roughly equal to their husband's benefit.[2]
- Solely on the basis of their own earnings. These beneficiaries are classified as retired workers. The benefits based on their own earnings exceed any amount to which they may be entitled as wives or widows.
- On the basis of their own earnings and those of their spouse. These women, called dually entitled beneficiaries, are entitled to a benefit based on their own earnings but it is less than their benefit as a wife or widow. They are entitled to the retired-worker benefit plus the difference between that amount and the amount to which they would be entitled as wives or widows.

---

*Division of OASDI Statistics, Office of Research and Statistics, Office of Policy, Social Security Administration. The author wishes to thank the many members of her division who made important contributions to the Improved Family Benefit Data Project. Among them are Kim A. Bennett, Robert H. Finch, Jr., Carolyn A. Harrison, Joseph Irwin, Beatrice K. Matsui, Susan L. Rick, Evelyn B. Rosen, Nellie A. Selak, Edward F. Staples, and Fern C. Stenwick. The author also wishes to acknowledge the many useful comments of Virginia Reno of the Program Analysis Staff, Office of Research and Statistics.

[1] With a few minor exceptions, the Social Security program pays benefits without any distinctions based on gender. Very few men, however, receive benefits based on the earnings of a spouse. Thus, for simplicity, this article refers to wives and widows and not husbands and widowers, although the same principles apply to them.

[2] A wife claiming benefits at age 65 is potentially entitled to half of her husband's Primary Insurance Amount (PIA). Unless her husband claimed actuarially reduced benefits, a widow claiming benefits at age 65 is entitled to an amount equal to her husband's PIA. If her husband was receiving actuarially reduced benefits at the time of his death, however, the widow's benefit, after any reduction for her age, is limited to the amount her deceased husband was receiving, but to no less than 82.5 percent of his PIA.

Unless a woman is entitled to a benefit based on her husband's earnings, the standard administrative data files do not record her marital status or the beneficiary status of her husband. Thus, the Social Security data normally published do not provide information on the combined benefits paid to married couples in which each spouse receives benefits based on his or her own earnings. In the normally published data, such couples are counted as two individual workers—a female "worker-only" beneficiary and a male "worker-only" beneficiary. Similarly, in the routinely available data, it is not possible to distinguish between benefits paid to retired female workers who are married and those who are widowed, divorced, or who never were married.

The Improved Family Benefit Data Project described here uses as its base not the administrative data files, but information from the benefit records of about 52,000 sample cases. About 10,000 claims folders of women entitled solely as retired workers were examined to obtain their marital status and their husband's Social Security number. Thus, for the first time, it was possible to link the benefit records of these married couples. Details about the sample design and methodology are included in the technical note to this article.

The sample that was selected represented 7.8 million female retired workers who were classified as worker-only beneficiaries at the end of 1976. The term "worker only" refers to cases in which the female retired worker has no husband or children entitled to benefits on her earnings record.

The sample was of all female retired worker-only beneficiaries who were entitled to benefits at the end of 1976. The term "entitled" as used in this article means that the person was on the Social Security benefit rolls at the end of 1976. It includes not only those who were actually receiving benefits (those with benefits in current-payment status) but also those who had their benefit withheld for that month (usually because their earnings exceeded the exempt amount under the earnings test).[3] At the end of 1976, about 110,000 of these women had their December 1976 benefit withheld. Unless otherwise indicated, the data presented here refer to beneficiaries who were entitled to benefits. In a few cases, however, to make comparisons between data from this sample and certain program data, information is shown only for individuals and couples who had benefits in current-payment status for December. All data about the number of beneficiaries and the amount of benefits are as of the end of 1976.

## Major Findings

At the end of 1976, about 7.8 million female retired workers were entitled to benefits based on their own earnings. About 2,356,000 of these women were married to another retired-worker beneficiary. This figure includes about 640,000 who were dually entitled as wives. Some 3.3 million female retired workers were widowed, of whom about one-third were dually entitled. About 1.4 million were either divorced or never had been married. About 700,000 were married to either a nonbeneficiary or to a person whose benefit status was unknown. In addition, administrative data files indicate that about 2.8 million women aged 62 or older were entitled to benefits solely as wives of retired workers, and about 3.7 million women aged 62 or older were entitled to benefits solely as aged widows (table 1).

Couples in which the wife was entitled to a retired-worker benefit averaged higher benefits than did couples in which the wife was entitled only to a wife's benefit—about 18 percent higher overall. When both groups are combined, the average benefit for retired couples was 8 percent higher than that for couples in which the wife received only a spouse's benefit. Thus, the average benefit figure routinely available from administrative files (and published regularly by the Social Security Administration) understates the average couple's benefit by about that amount. The average total benefit for all two-worker retired couples was about equal to the sum of the average benefit for all male retired workers and the average benefit for all female retired workers at the end of 1976. While the average benefit for two-worker couples is not routinely tabulated, the averages for retired male and female workers are.

Among the other major findings:

- —Among all women aged 62 and older, benefits were highest for dually entitled widows and lowest for wives entitled only to a spouse's benefit.
- —About half the widows aged 65 and older were entitled to retired-worker benefits and two-thirds of them were entitled only to a worker's benefit.
- —Average benefits for dually entitled widows were about 15 percent higher than those for widows entitled to benefits based solely on their deceased husband's earnings and 19 percent higher than those for widows entitled solely on the basis of their own earnings.
- —About half the wives aged 62 and older were entitled to retired-worker benefits. Younger wives

---

[3] Most of these women had their benefits withheld because their earnings exceeded the amount permitted under the earnings test provision of the Social Security law. In 1976, retired-worker beneficiaries were subject to the earnings test if their earnings exceeded $2,760. If it was determined that a woman was married to another retired worker, data was shown for the husband, regardless of whether or not his December benefit had been suspended. Data are shown for all beneficiaries on the rolls because if both marital partners were retired workers, the suspension of one person's retired-worker benefit would not normally affect the payment of the other person's retired-worker benefit. Thus, if the data were restricted to cases in which both persons were receiving benefits in December 1976, the number of married couples would be understated.

**Table 1.—Women aged 62 and over entitled to Social Security benefits, by marital status**

| Marital and benefit status | Number (in thousands) [1] [2] | Percent | Retired-worker beneficiaries (in thousands) [2] | Percent |
|---|---|---|---|---|
| Total | 14,650 | 100 | 7,810 | 100 |
| Married to retired worker | 5,130 | 35 | 2,350 | 30 |
| Entitled only as worker | 1,710 | 12 | 1,710 | 22 |

| Retired workers married to nonbeneficiaries | 430 | 3 | 430 | 5 |
| Retired workers married to persons with unknown benefit status | 280 | 2 | 280 | 4 |
| Remarried widows [5] | 70 | (3) | ... | ... |
| Surviving parents | 20 | (3) | ... | ... |

[1] Excludes special age-72 beneficiaries and persons entitled to benefits as disabled children.

[2] Excludes retired workers with husbands and/or children entitled to benefits.

[3] Less than 1 percent.

[4] Also included with wives.

[5] Also included with aged widows.

were more likely to be entitled to retired-worker benefits than were older wives.

—Husband's of women who received retired-worker benefits had slightly higher age 65 benefits than did husbands of women who received only spouse's benefits.

—Despite their historically higher rate of labor-force participation, black wives were no more likely to be entitled to retired-worker benefits than were white wives, although black widows were more likely than white widows to be entitled as retired workers.

—Among all women entitled to retired-worker benefits, average benefits were lowest for those aged 62–64 and 80 or older.

## Retired Couples

The normally available program data for retired couples include information covering cases in which the husband draws a retired-worker benefit and the wife draws only a spouse's benefit. At the end of 1976, about 2.6 million such couples were receiving benefits, i.e., their benefits were in current-payment status. The average combined benefit amounted to $374. About 7,000 couples were made up of retired female workers with a spouse receiving husband's benefits. This article provides new information on another group of retired couples—those in which both the husband and wife are entitled to retired-worker benefits.

At the end of 1976, 2.3 million of these two-worker couples were entitled to monthly benefits averaging $446. Among the 2.2 million two-worker couples in which both spouses had benefits in current-payment status at that time, benefits averaged $442. As the following tabulation shows, this amount was about $68 a month higher than that for couples in which the wife received only a spouse's benefit.

| Type of couple | Number of couples (in thousands) | Average benefit |
|---|---|---|
| Total | 4,832 | $404 |
| Retired worker and wife beneficiary | 2,647 | 374 |
| Retired worker and husband beneficiary | 7 | 320 |
| Two retired workers | 2,178 | 442 |

In about 56,000 of the couples in which the wife was entitled only as a worker, the husband and wife were separated. Unless otherwise indicated, these couples are excluded from the text and the text tables. However, data for those couples are shown in the detailed tables, which appear at the end of this article. The same procedure applies to the 52,000 couples in which a female retired worker was married to a disabled worker.

The two-worker couples consisted of those in which the wife was dually entitled and those in which she was entitled only to a benefit as a worker because that amount exceeded the benefit for which she was eligible as a spouse. Benefits to which members of the two groups were entitled (an amount that varies slightly from the amount actually being paid to those receiving benefits) averaged about the same: $443 for couples in which the wife was dually entitled and $447 for couples in which she was entitled only to a worker's benefit. The allocation of benefits within the couples differed, however, as shown in the following tabulation.

| Type of couple | Number of couples (in thousands) | Average benefit for— | | |
|---|---|---|---|---|
| | | Couples | Wives | Husbands |
| Total | 2,300 | $446 | $178 | $278 |
| Wife dually entitled | 642 | 443 | 139 | 303 |
| Wife entitled to worker's benefit only | 1,658 | 447 | 193 | 254 |

## Couples in Which the Wife Was Entitled Only to a Worker's Benefit

Monthly benefit amounts averaged $447 for the 1.7 million intact married couples in which the woman was entitled only to a worker's benefit. Benefits for the woman averaged $193, while benefits for the men averaged $254. These amounts were based on Primary Insurance Amounts (PIA's) averaging $211 and $263, respectively (table A). The PIA is related to a worker's earnings in covered employment averaged over a period of time. The full PIA is payable to retired workers who become entitled to benefits at age 65. Benefits claimed before age 65 are reduced by actuarial factors. Benefits for retired workers who continue to work after age 65 can be increased by a delayed retirement credit.[4] Wives (and husbands) of retired workers receive up to one-half of the worker's PIA. Thus, benefits paid may vary from the PIA.

The total benefit to which these two-worker couples could be entitled ranged from about $173 to about $800.[5] The distribution of benefits for these couples was concentrated in the middle of the range. About 52 percent of the couples were entitled to benefits of from $300 to $500 (table B).

As would be expected, husbands were entitled to higher benefits than were wives. About 27 percent of the husbands, but only 8 percent of the wives, were entitled to individual monthly benefits of $300 or more. About 36 percent of the wives, but only about 14 percent of the husbands, were entitled to individual monthly benefits of less than $160 per month (table C). In about 73 percent of the couples, the husband's PIA exceeded the wife's PIA. For one-third of the couples, the husband's PIA exceeded the wife's PIA by at least 50 percent (table D).

## Couples in Which the Wife Was Dually Entitled

Monthly benefit amounts averaged $443 for the 642,000 couples consisting of a male retired worker and a dually entitled wife. Benefits for dually entitled wives averaged $139, and benefits for their husbands averaged $303; their PIA's averaged $119 and $313, respectively. The disparity in benefits for dually entitled wives and their husbands was much greater than that among couples in which both partners were entitled solely on the basis of their own earnings (table C).

The greater disparity among couples in which the wife was dually entitled is to be expected because a woman generally cannot have this status unless her husband's PIA is at least twice as high as her own. For about two-fifths of the couples in this category, the husband's PIA was between two and a half and three times as high as the wife's. For about one-fifth of these couples, the husband's PIA was more than three times as high as the wife's (table D).

The factor of dual entitlement limited both the lower and the upper range of benefits to which the couples could be entitled. Since the minimum PIA at the end of 1976 was $107.90 monthly and the husband's PIA generally had to be at least twice as high as that, and was considerably higher in most cases, combined benefits seldom fell below $300. Because only about 4 percent of the husbands had PIA's of $400 or more and the benefit payable to a dually entitled woman could not generally exceed 50 percent of her husband's PIA, there were also few cases in which the combined benefits exceeded $600. About 17 percent of the couples in which the wife was dually entitled had monthly benefits of $500 or more, compared with 34 percent for couples in which the wife was entitled only to a worker's benefit (tables B and E).

---

[4] Wives who become entitled to benefits before age 65 and who are not caring for an eligible child receive an actuarially reduced benefit. For retired workers, the PIA is reduced by 5/9 of 1 percent for each month of entitlement before age 65, with a maximum reduction of 20 percent. The wife's benefit is reduced by 25/36 of 1 percent for each month of entitlement before age 65, with a maximum reduction of 25 percent. Monthly benefits for retired workers can be increased under the delayed retirement credit provision. In 1976, benefits were increased under this provision by 1/12 of 1 percent for each month a fully insured worker aged 65-71 was entitled to an unreduced benefit but did not receive it because he or she was working or did not file an application. (For those turning age 62 in or after 1979, the delayed retirement credit will be 3/12 of 1 percent for each such month.)

[5] At the end of 1976, the minimum PIA was $107.90. If both spouses were entitled to the minimum PIA and began receiving benefits at age 62, they would have been entitled to a total benefit of $172.80. If both spouses retired at age 65 in 1976 and both had maximum taxable earnings through 1975, they would have been entitled to $790.40. Some couples could have received more than that if one or both spouses attained age 65 before 1976 and continued to work with high earnings or had a previous period of disability. Retired workers could have received less than the minimum if they were entitled to transitionally insured benefits. Under this provision, the PIA for a retired worker was $74.10, and the amount of the wife's benefit was $37.10. At the end of 1976, benefits based on the transitionally insured provision were payable to 6,058 male retired workers, 20,604 female retired workers, and 790 wives of retired workers.

### Comparison of Two-Worker Couples With Worker-and-Wife Couples

At the end of 1976, benefits were also being received by about 2.6 million couples consisting of a male retired worker and a woman who was entitled only to wife's benefits. The average benefit payable to these couples was $374, compared with an average of $442 for the 2.2 million couples consisting of two retired workers who were both receiving benefits (table F). PIA's for the husbands in worker-and-wife couples averaged $264, compared with $274 for husbands in two-earner couples.

The monthly benefit payable to a worker-and-wife couple could range from about $127 (if the worker had the minimum PIA of $107.90 and both he and his wife elected benefits at age 62) to about $600. By contrast, possible benefits ranged from approximately $173 to about $800 for two-earner couples.

Because this project also provided information on total benefits paid to couples, it was also possible to examine the antipoverty effects of Social Security for couples. While Social Security is not designed to guarantee an income that exceeds the poverty threshold (but rather to provide a basic floor of protection that will be supplemented by other income), it is still interesting to note how many couples and individuals would have had incomes above the poverty line without payments from sources other than Social Security.

In 1976, the poverty line for an aged couple was $3,445. About 81 percent of the couples in which both spouses were receiving benefits had total benefits exceeding that level. Not all of the remaining 19 percent were poor, of course, since some had income from other sources, such as private pensions, earnings, assets, or transfer payments from other government programs.

At the end of 1976, about nine-tenths of the couples consisting of two retired workers and about three-fourths of the worker-and-wife couples with both benefits in current-payment status were receiving benefits of at least $300 per month. If they received benefits for the entire year at the same benefit level, they would have received at least $3,490 (benefits were increased 6.4 percent in June 1976). Thus, for most of the couples receiving Social Security benefits, the benefits alone were enough to provide income above the poverty level. The two-earner couples, of course, fared better in that respect. Relatively more of the two-earner couples than the worker-and-wife couples (44 percent, compared with 20 percent) had combined monthly Social Security benefits of at least $460, which was approximately 1 1/2 times the poverty level.

## Female Retired Workers Not Married to Another Worker Beneficiary

### Number and Type

Data from the Improved Family Benefit Data Project also made it possible to determine the marital status of most of the female retired workers who were not married to another worker beneficiary. The data indicate that about 5.4 million female retired-worker beneficiaries on the rolls at the end of 1976 were not married to another worker beneficiary. Information was compiled for all of these women, including those whose benefits were suspended in December 1976.

The largest group, which totaled 2.1 million or about 40 percent of those not married to another worker beneficiary, were widows entitled only to a retired-worker benefit. The next largest group, involving 1.1 million or about 21 percent of the total, were women entitled to a widow's benefit in addition to their own retired-worker benefit (table 2). A widow can receive up to the amount her husband would be receiving if he were still living.[6] If the monthly amount of a widow's benefit exceeds her own retired-worker benefit, she becomes dually entitled and receives the difference between the widow's benefit and her own retired-worker benefit.

About 884,000 retired female workers (about 16 percent) were never married, and 535,000 (about 10 percent) were divorced. The remaining 710,000 women (about 13 percent) were either married to a nonbeneficiary or the beneficiary status of the husband could not be determined (table G).

### Benefit Levels

Benefits were higher for nonmarried female retired workers than for those who were married (table 3).

---

[6] If the husband received reduced benefits before his death, the widow's benefit is limited to the amount he was receiving but not less than 82.5 percent of the PIA. The widow's benefit is also actuarially reduced for months of entitlement before age 65. The benefit is reduced by 19/40 of 1 percent for each month of entitlement between ages 60 and 65, with a maximum reduction of 28.5 percent. If a widow becomes entitled to disabled widow's benefits before age 60, her benefit is reduced by 28.5 percent plus an additional 43/240 of 1 percent for each month of entitlement before age 60, for a maximum reduction of 50 percent. Effective with June 1978, widows may receive increased benefits if their husbands were eligible for the delayed retirement credit.

**Table 2.**—Number of widows aged 62 and over and average monthly benefit amount, by benefit status

| Entitled to benefits as— | Number (in thousands) | Average monthly benefit amount |
|---|---|---|
| Total | 7,031 | $212 |
| Widow only [1] | 3,750 | 210 |
| Retired worker—dually entitled | 1,133 | 241 |
| Retired worker only | 2,148 | 202 |

[1] Includes about 90,000 surviving divorced wives and remarried widows. Excludes about 40,000 widowed mothers and disabled widows.

**Table 3.**—Average monthly benefits for women aged 62 and over, by marital and benefit status

| Marital and benefit status | Average monthly benefit amount |
|---|---|
| Married to another retired worker | $145 |
| Entitled only as worker | 193 |
| Entitled only as spouse | 118 |
| Dually entitled | 139 |
| Widowed | 212 |
| Entitled only as worker | 202 |
| Entitled only as widow | 210 |
| Dually entitled | 241 |
| Never married | 214 |
| Divorced | 193 |
| Entitled as retired worker | 195 |
| Entitled as divorced wife [1] | 120 |
| Entitled as surviving divorced widow [2] | 217 |
| All retired workers | 198 |
| Married | 175 |
| Nonmarried [3] | 213 |

[1] Also included with wives.

[2] Also included with widows.

[3] Includes separated women and those married to other than retired workers.

Among those who were not married to another beneficiary, benefits were highest for women who were dually entitled to widow's benefits ($241). However, their PIA's, which reflect only their own earnings, averaged lowest ($157) (table G). Benefits for widows entitled only to a retired-worker benefit averaged $202, based on PIA's averaging $207.

Among the other groups of female retired workers who were not married to another worker beneficiary, benefits averaged highest ($214) for those who had never been married, based on PIA's averaging $224. Benefits for divorced women averaged $195, based on PIA's averaging $209. Average benefits were lowest ($172) for women who were married to men whose beneficiary status could not be determined, and for women who were married to a nonbeneficiary ($160). These amounts were based on PIA's averaging $187 and $177, respectively.

Benefits for female retired workers who were fully insured could range from about $86 to about $400.[7] Only about 12 percent of the female retired workers who were not married to another worker beneficiary were entitled to benefits of $300 or more (table H).

As indicated earlier, widows who are not entitled to their own retired-worker benefit may be entitled to a Social Security benefit as the widow of a deceased worker. At the end of 1976, 3.7 million women aged 62 or older were entitled to widow's benefits.

For the majority of widowed, divorced, and never-married female beneficiaries, Social Security benefits alone did not meet the $2,730 poverty line for aged individuals living alone in 1976. This figure corresponds to a monthly benefit amount of about $240 at the end of 1976. Among widows, 37 percent of those who were receiving benefits based solely on their deceased husband's earnings record, and who were not remarried or divorced, received benefits of $240 per month or more (table J). Among the widows who were entitled to retired-worker benefits, 59 percent of the dually entitled and 32 percent of those entitled only on the basis of their own earnings were entitled to benefits that exceeded the poverty line. Also raised above the poverty line by their benefits were 41 percent of the female retired workers who had never married and 28 percent of those who were divorced (table H). Those whose benefits did not meet this threshold, of course, were not necessarily poor. Many may have had income from other sources.

## Race Comparisons

Average benefits for two-earner couples were higher for white couples than for black couples. Benefits for couples consisting of two retired workers who were living together and in which the wife was entitled only as a worker averaged $451 for white couples and $366 for black couples. Comparable averages for couples in which the wife was dually entitled were $444 and $421, respectively.

Black couples also were less likely than white couples to be entitled to benefits above the poverty level. About 91 percent of the white couples were entitled to benefits of $300 per month or more, compared with about 70 percent of the black couples. About 46 percent of the white couples, but only 26 percent of the black couples, were entitled to benefits of at least $460 (1 1/2 times the poverty threshold).

Among women who were not married to another worker beneficiary, benefits also tended to average higher for whites than for blacks. Among the widows who were entitled entirely on the basis of their own earnings, benefits for white women averaged $208, compared with $155 for black women. Benefits for dually entitled widows averaged $245 and $203 for whites and blacks, respectively (table G).

---

[7] If a female retired worker with the minimum PIA of $107.90 became entitled to benefits at age 62, she would have been entitled to $86.40 monthly. If a female retired worker became entitled to benefits at age 65 in 1976 and was credited with maximum taxable earnings through 1975, she would have been entitled to $403.10 a month. Female retired workers could have been entitled to more than that amount if they had attained age 65 before 1976 and continued to work with high earnings, or had a prior period of disability.

Benefits for white women who had never married averaged $216, compared with $186 for never-married black women. These amounts were based on PIA's averaging $266 and $196, respectively. Average amounts for divorced women were $201 for whites, and $161 for blacks. These amounts were based on PIA's averaging $215 and $174, respectively.

Contrary to expectations, white wives were about as likely as black wives to be entitled to a retired-worker benefit, despite their historically lower rate of labor-force participation (table 4).[8] The expected higher rate of entitlement to retired-worker benefits among blacks than whites is apparent among widows aged 62 or older, however. About 56 percent of widows who were black in this age group, compared with 46 percent of those who were white, were entitled to benefits on their own earnings records. About 30 percent of the whites and 41 percent of the blacks were entitled only to a retired-worker benefit (table 5).

## Age Comparisons

Younger wives were more likely than older wives to be entitled to benefits based on their own earnings records, reflecting the increased labor-force participation of married women since the early 1960's. About 46 percent of all wives of retired workers who were aged 62 or older were entitled to their own retired-worker benefit. Fifty-one percent of the wives aged 62–69, but only 32 percent of those aged 75 or older, were entitled to such benefits (table 6).

Among widows, however, entitlement to retired-worker benefits did not vary as greatly by age. About 49 percent of all widows aged 65 or older had this entitlement, as did 50 percent of the widows aged 65–69 and about 46 percent of those aged 75 or older (table 7). The similarity in beneficiary status by age may in part result from higher rates of labor-force participation of widows when compared with married women.

**Table 4.**—Women on the Social Security rolls aged 62 and over who were wives of retired workers, by race

| Race | Number (in thousands) | Total percent | Percent entitled to benefits as— | | | |
|---|---|---|---|---|---|---|
| | | | Wives of retired workers [1] | Retired-worker beneficiaries [2] | | |

| 70–74. . . . . . | 1,296 | 100 | 55 | 45 | 12 | 33 |
| 75–79. . . . . . | 644 | 100 | 64 | 36 | 11 | 25 |
| 80 and over . | 355 | 100 | 73 | 27 | 9 | 18 |

[1] Includes about 20,000 divorced wives.

[2] Includes separated women.

[3] Includes those with unknown age.

As a group, widows were much older than the other types of beneficiaries (table 8). About 47 percent of the retired workers who were widows were aged 75 or older, compared with about 14 percent of those who were married to another retired worker (tables K and L). This difference could be expected, considering the longer life expectancy of women. In 1978, life expectancy for 62-year-old women was 20.6 years, compared with 15.8 years for men of the same age.[9]

Among the other groups of women who were not married to another retired worker, about 44 percent of those who had never been married and about 25 percent

---

[8] For historical rates of labor-force participation by race, sex and marital status, see Bureau of the Census, **Statistical Abstract of the United States, 1979** (100th edition), table 644. In 1960, for example, 47 percent of all nonwhite women were in the labor force, compared with 36 percent of all white women.

| Never married | 224 | 226 | 235 | 238 | 222 | 200 |
| Divorced | 209 | 195 | 228 | 209 | 205 | 170 |

of those who were divorced were aged 75 or older. Only about 13 percent of the women married to a nonbeneficiary were this old, and about 31 percent were under age 65 (table K). Some of these women presumably were married to men who were under age 62 or who were still working and therefore had not filed for retirement benefits.

For most types of married and nonmarried female retired workers and two-earner couples, both benefits and PIA's were highest among those in which the woman was aged 65-69 and declined thereafter as the age of the women increased. Benefits and PIA's also were lower among those aged 62-64 than among those aged 65-69 and in many instances than among those aged 70-74 (tables 9 and 10).

The lower PIA's and the lower benefit amounts among older beneficiaries are probably explained by the fact that these persons were much more likely than younger beneficiaries to have been entitled to benefits for many years. Thus, they were less likely to have been affected by increases in the early 1970's in the taxable maximum and in the general level of earnings.[10] PIA's and benefits among those aged 62-64 are discussed in the next section.

## Benefit Reduction Status Comparisons

Married women were more likely to claim reduced benefits than those who were not married, and those with lower PIA's were more likely to retire early. Women married to another retired worker and claiming reduced benefits included:

—81 percent of those entitled to benefits only as workers.

—85 percent of those who were dually entitled.

—74 percent of those who were entitled only as spouses.

---

[10] Maximum taxable earnings were $3,000 for 1937-50, $3,600 for 1951-54, $4,200 for 1955-58, $4,800 for 1959-65, $6,600 for 1966-67, $7,800 for 1968-71, $9,000 for 1972, $10,800 for 1973, $13,200 for 1974, $14,100 for 1975, and $15,300 for 1976.

The husbands of such women were much less likely to claim reduced benefits (table 11).

Among the nonmarried women, divorced women were the most likely (69 percent) to claim reduced benefits. Widows entitled only on the basis of their own earnings were the least likely to do so (47 percent).

Overall, female retired workers who were married probably had greater resources than their nonmarried counterparts, and thus more of them may have been able to afford to retire early and claim reduced benefits. Another factor probably related to the smaller proportion of nonmarried female retired workers with reduced benefits was the difference in entitlement dates among the various groups of women. Nonmarried female retired workers, as a group, were older than their married counterparts, and older women were likely to have claimed benefits earlier, when fewer workers of all types were claiming reduced benefits. About 42 percent of the female retired workers who were widowed, as well 37 percent of those who had never married and 20 percent of those who were divorced, became entitled to benefits before 1965 (table M). By contrast, only about 14 percent of the female retired workers who were married became entitled before that time (table N). Reduced benefits first became available to female retired workers in 1956. Social Security program data show that 53 percent of the retired-worker awards to women in 1957 were actuarially reduced. The proportions of awards for women that were reduced were 64 percent in 1963, 72 percent in 1970, and 79 percent in 1976.

Except for the female retired workers who were dually entitled to widow's benefits, both the average monthly benefits and the PIA's upon which they were based were higher for the nonmarried women with unreduced benefits. For example, among women who had never married, PIA's averaged $233 for those with unreduced benefits and $216 for those with reduced benefits. Monthly benefits for these women averaged $233 and $197, respectively (table O).

Among couples in which the wife was entitled only as a worker, average PIA's were considerably higher for both husbands and wives who had unreduced benefits. Among the husbands, PIA's for those with unreduced benefits averaged $275, while PIA's for those with reduced benefits averaged $248. Among the wives, comparable averages were $249 and $202, respectively (table P). Since more persons with unreduced than reduced benefits probably worked when they were aged 62–64, earnings during these years may have helped to raise their average earnings and thus their PIA's. Also, relatively more retired workers who elected benefits before age 65 may have had somewhat lower lifetime earnings than those who became entitled at age 65 or later. As would be expected from the PIA comparisons, most of those entitled before age 65 had lower monthly benefits than those who did not (tables 12 and 13).

**Table 11.**—Proportion of certain beneficiaries with reduced benefits, by marital status

| Marital status | Percent of women with reduced benefits | Percent of men with reduced benefits |

## Summary

The Social Security Administration publishes data each year about families receiving Social Security benefits. The family designation used in this data is determined by the type of beneficiaries drawing benefits on a worker's earnings record. Thus, if a wife and a husband are each entitled to a benefit based on their own earnings records, they would be designated as two worker-only beneficiaries, and the benefit amount shown would be the amount payable to each one individually. The Improved Family Benefit Data Project was designed to provide information about the combined benefits payable to such couples.

The data from this project indicate that of the 7.8 million female retired workers on the rolls at the end of 1976 who were classified as worker-only beneficiaries, 2.4 million or 31 percent were married to another person entitled to a worker benefit. About 640,000 of these women were dually entitled to their own retired-worker benefit as well as to a larger benefit as a wife. About 1.7 million were married to another retired worker and were entitled solely as a retired worker. About 52,000 were married to a disabled worker.

Average monthly benefits were higher for the couples consisting of two retired workers than for couples consisting of a male retired worker and a woman who was entitled to wife's benefits on his earnings record. Monthly benefits for the two-worker couples averaged $442, compared with $374 for worker-and-wife couples. About nine-tenths of the two-worker couples and three-fourths of the worker-and-wife couples had Social Security benefits that were above the 1976 poverty threshold for an aged couple.

This project also provided information about the marital status of the 5.4 million female retired workers who were not married to another retired-worker beneficiary. The largest group, which numbered 2.1 million, was composed of widows entitled solely as retired workers. The next largest group, which numbered 1.1 million, was made up of widows dually entitled to a widow's benefit. About 884,000 of the women had never married and 535,000 were divorced. The remaining 710,000 women were either married to a nonbeneficiary or to a man whose beneficiary status could not be determined.

Average benefits were highest ($241) for those who were dually entitled to a widow's benefit. Benefits for widows who were entitled only as workers averaged $202. Benefits for the women who had not married averaged $214, and divorced women averaged $195. About 41 percent of the widows and never-married women and about 28 percent of those who were divorced had Social Security benefits above the poverty threshold for an aged individual.

Among both the married couples and the women who were not married to another worker beneficiary, benefit levels varied by race and age. Benefits tended to be higher for white than for black couples and nonmarried women. Benefits tended to be lower when wives and nonmarried women were aged 80 or older or under 65.

Nonmarried female retired workers were less likely to elect actuarially reduced benefits than were married women. About 53 percent of the never-married women, 69 percent of the divorced women, and 52 percent of the widows elected reduced benefits, compared with 82 percent of the women married to another retired worker beneficiary. Primary insurance amounts as well as monthly benefit amounts tended to be higher among those with unreduced benefits.

## Technical Note*

### Sampling Frame

The sampling frame for the Improved Family Benefit Data Project was a list of all possible nine-digit Social Security Numbers (SSN's).[11] The first three digits are the area code and generally identify the State of issuance. (An exception to the use of area numbers was made for persons covered under the Railroad Retirement Act; they were given a special block of SSN's that were used through June 1963.) In most instances, all 9999 SSN's (numbers ending 0000 are not used) with the same first five digits (area and group codes) are issued within a relatively short period. Thus, a sample selected using the serial number portion (last four digits) of the SSN can be considered to be stratified by State and time of issue.

### Sample Design

The Master Beneficiary Record (MBR) contains data for all retired workers and is sorted by SSN's. From the first phase sample of predesignated SSN's, the MBR, as of December 1976, was used to select a subsample of SSN's that corresponded to female retired "worker-only" beneficiaries, including those who had their benefits suspended.

An extract file of the MBR was created for this 2.4-percent sample of female beneficiaries. The extract file was used as the primary source to categorize the sample of female beneficiaries into the following deeper strata:

(1) Women entitled to a worker's benefit who were not entitled to a spouse's benefit.

---

*By Robert H. Finch, Jr., Division of OASDI Statistics, Office of Research and Statistics, Office of Policy, Social Security Administration.

[11] For a description of the Social Security number issuance process, see Robert H. Finch, Jr., **Sampling Variability in the 1-Percent Continuous Work History Sample**, SSA Publication No. 77-11904.

(2) Women entitled to a worker's benefit and to a larger benefit as a spouse and who were married to a retired worker.

(3) Women entitled to a worker's benefit and to a larger benefit as a spouse and who were not married to a retired worker.

(4) Women entitled to a worker's benefit and to a larger benefit as a spouse and who were married, but the beneficiary status of the husband was unknown.

Workload constraints allowed the review of only 10,000 folders. This step was accomplished by subsampling stratum 4 and by further dividing stratum 1 into additional strata using a hierarchial method and by subsampling these strata. Records in stratum 1 were matched against Social Security Administration data files that contained information on marital status at the time the claim was filed. These files were available for 1975 and some earlier years. Matched records of married and unmarried beneficiaries for 1975 were designated as strata 5 and 6, respectively. Similar matched records for 1974, 1973, and 1972 were designated as strata 7 through 12. Unmatched records that did not contain cross-reference numbers were retained as stratum 1; those that did contain cross-reference numbers were designated as stratum 13. Table I provides additional descriptions of all the strata for this study.

## Sample Selection

All cases (about 42,400) in strata 2 and 3 were included in the study because the extract file contained both the marital status and benefit status of the husbands. However, the Social Security claims folders had to be examined to obtain information on the marital and the benefit status of the husbands of the married women in the remaining strata. A total of 10,000 cases was selected from the remaining strata by optimum allocation. The strata designation and the sample sizes are also given in table I.

## Data Collection

The claims folders for the subsample were requested from the SSA field offices and all but 399 were received. The folders were manually reviewed to obtain information on the beneficiary's marital status. If the beneficiary was married, the SSN of the spouse was obtained from the folders and then used to obtain information from the MBR.

## Estimation Procedure

Since the data for this study were obtained from a sample of records, it was necessary to inflate the sample figures to produce estimates of the totals. The estimation procedure involved inflating the sample results by the product of the reciprocal of the probability of selection and a noninterview adjustment (the ratio of the number of folders selected to the number of folders received for each stratum).

## Sampling Variability

Because of sampling variability, estimates based on samples can be expected to differ from figures that would have been obtained if the entire population had been used for tabulations under the same conditions as the actual sample. The particular sample selected for this study of female retired "worker-only" beneficiaries is one of a large number of similar probability samples of the same size that, by chance, might have been selected under the same specifications. Each of the pos-

**Table I.**—Substrata in the Improved Family Benefit Data Project

| Stratum | Entitlement status | Current marital status | Benefit status of husband | Year benefits were awarded | Marital status at award | Cross reference to another account | Number of cases | |

| 11 | Single | Unknown | NA | 1972 | Married | NA | 5,636 | 690 |
| 12 | Single | Unknown | NA | 1972 | Other | NA | 4,317 | 43 |
| 13 | Single | Unknown | NA | 1976 | Unknown | Yes | 3,279 | 327 |
| 13 | Single | Unknown | NA | 1971 or earlier | Unknown | Yes | | |

sible samples would yield somewhat different sets of results. The deviation of a sample estimate from the average of all possible samples is called the sampling error. The standard error of an estimate is a measure of the variation among the estimates from the possible samples and thus is a measure of the precision with which an estimate from a particular sample approximates the average result of all possible samples.

In conjunction with associated estimates, the standard error may be used to define confidence intervals or ranges that would have a specified probability of including the average result of all possible samples. To illustrate, if all possible samples were selected, each of these surveyed under essentially the same conditions, and an estimate and its estimated standard error were calculated from each sample, then—

(1) Approximately 68 percent of the intervals from one standard error below to one standard error above the derived estimate would include the average value of all possible samples.
(2) Approximately 95 percent of the intervals from two standard errors below to two standard errors above the derived estimate would include the average value of all possible samples.
(3) Approximately 99 percent of the intervals from 2 1/2 standard errors below to 2 1/2 standard errors above the derived estimate would include the average value of all possible samples.

Thus, for a particular sample, one can say with specified confidence that the average of all possible samples is included in the constructed interval.

## Stratification Effects on Estimates of Sampling Variability

As stated previously, strata 2 and 3 were not further subsampled. Estimates of sampling variability for data primarily from these strata are considerably smaller than similar estimates for data from the other 11 strata. Estimates of sampling variability are provided separately for "dually entitled" and for "all other" cases. The combined "dually entitled" and "not dually entitled" data have the sampling variability of "all other" cases.

## Standard Error of Estimated Number of Persons or Couples

Table II provides approximate standard errors for the estimated number of "dually entitled" persons or married couples and "all other" persons or married couples. To use table II, consider, for example, that table A shows there were an estimated 12,000 "other race" couples composed of two retired workers who were not dually entitled and living together. Table II shows that the standard error for an estimate of 10,000 is 2,700 and that the standard error for an estimate of 25,000 is 4,300. Linear interpolation gives a standard error of 2,900 for 12,000 estimated couples. Thus, the 68-percent confidence interval for 12,000 is 9,100 to 14,900.

**Table II.**—Approximate standard errors of estimated number of persons or couples

| Size of estimate | Standard error | |
|---|---|---|
| | Dually entitled | All others |
| 3,000 | 400 | 1,500 |
| 5,000 | 500 | 1,900 |
| 7,500 | 600 | 2,300 |
| 10,000 | 700 | 2,700 |
| 25,000 | 1,000 | 4,300 |
| 50,000 | 1,500 | 6,200 |
| 75,000 | 1,800 | 7,600 |
| 100,000 | 2,100 | 9,000 |
| 250,000 | 3,300 | 14,000 |
| 500,000 | 4,700 | 21,000 |
| 750,000 | 5,900 | 26,000 |
| 1,000,000 | 7,000 | 30,000 |
| 2,500,000 | 12,000 | 45,000 |

## Standard Error of Estimated Percentage of Persons or Couples

The reliability of an estimated percentage depends on both the size of the percentage and the size of the total on which the percentage is based. The standard errors shown in the tables are expressed as percentage points. Table III provides approximate standard errors of estimated percentages for dually entitled persons or married couples. Table IV provides approximate standard errors for all other persons or married couples. To use table III consider, for example, that table E shows that 15.2 percent of the couples in which the female retired worker was married to another retired worker, was dually entitled, 80 years of age or older, and had a monthly benefit amount between $380 and $399.90. The base of the percentage is 31,000.

Table III shows that an estimate of 10 percent for a base of 25,000 has a standard error of 1.2 percent and

**Table III.**—Standard errors of estimated percentages for persons or couples who were dually entitled

| Base of percent | Size of percentage | | | | |
|---|---|---|---|---|---|
| | 2 or 98 | 5 or 95 | 10 or 90 | 25 or 75 | 50 |
| 25,000 | 0.6 | 0.9 | 1.2 | 1.8 | 2.0 |
| 50,000 | .4 | .6 | .9 | 1.2 | 1.4 |
| 75,000 | .3 | .5 | .7 | 1.0 | 1.2 |
| 100,000 | .3 | .4 | .6 | .9 | 1.0 |
| 250,000 | .2 | .3 | .4 | .6 | .7 |
| 500,000 | .1 | .2 | .3 | .4 | .5 |
| 750,000 | .1 | .2 | .2 | .3 | .4 |
| 1,000,000 | .1 | .1 | .2 | .3 | .3 |
| 2,500,000 | .1 | .1 | .1 | .2 | .2 |

**Table IV.**—Standard errors of estimated percentages for all other persons or couples

| Base of percent | Size of percentage | | | | |
|---|---|---|---|---|---|
| | 2 or 98 | 5 or 95 | 10 or 90 | 25 or 75 | 50 |
| 25,000 | 2.3 | 3.6 | 5.0 | 7.3 | 8.4 |
| 50,000 | 1.6 | 2.6 | 3.6 | 5.2 | 6.0 |
| 75,000 | 1.4 | 2.1 | 2.9 | 4.2 | 4.9 |
| 100,000 | 1.2 | 1.8 | 2.5 | 3.7 | 4.3 |
| 250,000 | .8 | 1.2 | 1.6 | 2.4 | 2.8 |
| 500,000 | .5 | .8 | 1.2 | 1.7 | 2.0 |
| 750,000 | .4 | .7 | 1.0 | 1.4 | 1.6 |
| 1,000,000 | .4 | .6 | .8 | 1.2 | 1.4 |
| 2,500,000 | .2 | .4 | .5 | .8 | 1.0 |

that an estimate of 10 percent for a base of 50,000 has a standard error of 0.9 percent. The table also shows that an estimate of 25 percent for a base of 25,000 has a standard error of 1.8 percent and that an estimate of 25 percent for a base of 50,000 has a standard error of 1.2 percent. A two-way linear interpolation was used to derive a standard error of 1.3 percent. Thus, the 68-percent confidence interval for the estimated 15.2 percent is from 13.9 percent to 16.5 percent. Table IV is used in the same manner as table III.

## Sampling Variability of Estimated Mean PIA's and Mean MBA's

The relative reliability of an estimated mean amount[12] depends primarily on the number of cases on which the mean is based. Table V provides relative sampling errors (approximate standard errors divided by either mean amount) for various estimates of number of persons or couples. A rough approximation to the standard error of an estimated mean amount can be obtained by finding the "number of persons" or "married couples" distribution from which the mean was computed, locating the appropriate relative sampling error for that base in table V (linear interpolation may be used), and multiplying the estimated mean amount by the relative sampling error.

**Table V.**—Relative sampling errors of estimated mean monthly benefit amount and mean monthly Primary Insurance Amount for persons and couples

| Size of base | Relative sampling error | | | |
|---|---|---|---|---|
| | Dually entitled | | All others | |
| | Persons | Couples | Persons | Couples |
| 2,500 | 0.02129 | 0.02372 | 0.12828 | 0.20400 |
| 5,000 | .01497 | .01686 | .09088 | .14424 |
| 7,500 | .01217 | .01382 | .07430 | .11777 |
| 10,000 | .01050 | .01201 | .06442 | .10199 |
| 25,000 | .00655 | .00771 | .04093 | .06450 |
| 50,000 | .00457 | .00555 | .02906 | .04561 |
| 75,000 | .00370 | .00459 | .02379 | .03725 |
| 100,000 | .00318 | .00402 | .02064 | .03226 |
| 250,000 | .00199 | .00267 | .01311 | .02043 |
| 500,000 | .00143 | .00200 | .00924 | .01449 |
| 750,000 | .00120 | .00170 | .00748 | .01187 |
| 1,000,000 | .00108 | .00152 | .00641 | .01031 |
| 2,500,000 | .00096 | .00112 | .00368 | .00665 |

Table G shows an average monthly benefit amount of $463.30 for the 699,000 women aged 65-69 who were married to another retired worker, not dually entitled, and living together and with their husbands. Table V gives a relative sampling error of 0.01449 for couples with a base of 500,000 and a relative sampling error of 0.01187 for couples with a base of 750,000. Linear interpolation gives a relative sampling error of 0.01240 when the average of $463.30 is multiplied by 0.01240, a standard error of 5.74 is found. Thus, the 68-percent confidence limits on the mean amount of $463.30 is from $457.56 to $469.04.

## Nonsampling Variability

In addition to sampling variability, the estimates in this article include the effects of nonsampling variability. This type of variability would be present in a complete compilation of records as well as in a sample. For this study, the 399 folders that were not received represent one type of nonsampling variability. Another type of nonsampling variability is represented by incorrect sex codes on the MBR.

Detailed tables A through P for this article appear on pages 16-24. Because of layout considerations, tables are not in alphabetical order after table J—Editor.

---

[12] The term "mean amounts" refers to mean Primary Insurance Amounts or to mean monthly benefit amounts.

**Table A.**—Benefits for two-worker couples: Number, average monthly benefit amount, and Primary Insurance Amount, by marital status and race, at end of 1976

| Characteristic | Number of couples (in thousands) [1] | Percent | Average monthly benefit amount of— | | | Average Primary Insurance Amount of— | |
|---|---|---|---|---|---|---|---|
| | | | Couple | Wife | Husband | Wife | Husband |
| Married to another retired worker: | | | | | | | |
| Entitled only as worker, living together | 1,658 | 100.0 | $447.20 | $193.30 | $253.90 | $210.60 | $262.60 |

# Benefits for Individual Retired Workers and Couples Now Approaching Retirement Age

by Virginia Reno and Anne Dee Rader*

The first article in this issue of the **Bulletin** provides information on women and couples who were receiving retired-worker benefits in 1976. This article updates that information, focusing on potential full retired-worker benefits earned by men and women who will be reaching retirement age in the early 1980's. It is estimated that an increasing proportion of married women will become insured for benefits in their own right. Among female workers, the highest benefits are projected for those who never married. Divorced women show the next highest benefits, widowed women are next, and then married women. Comparisons between men and women show little difference between the average benefits for those who never married; benefits for divorced women are projected to be about 80 percent of the benefits of divorced men; retired-worker benefits for married women are 58 percent as high as those for married men.

This article also gives estimates of combined benefits for couples in which both husbands and wives will be insured workers. The highest average benefits are for couples in which the wife would be dually entitled; the lowest benefits are for couples in which the wife would receive only a spouse benefit.

Social Security benefits are based on the retiree's own past earnings and, in some cases, on marital status and the past earnings of the spouse or former spouse. Data from the Social Security operating program do not provide complete information on the marital status of individual retirees or on the combined benefits of married couples. The data do show when a person receives benefits as the wife or widow (or husband or widower) based on a spouse's earnings. When, however, a retiree receives benefits based solely on his or her own earnings, that person's marital status is not routinely tabulated. And when both members of a retired couple receive benefits solely as retired workers, data on the combined benefits for the couple are not routinely available.

A companion article,[1] in this issue, provides detailed information on the benefits of married, widowed, divorced, and single retired women and on the combined benefits of retired couples receiving benefits in 1976. This study provides similar information, including trends, about the types and relative level of benefits for couples and unmarried persons who will be reaching retirement age in the early 1980's.

The first part of this article focuses on the potential individual retired-worker benefits earned by married, widowed, divorced, and never-married women and men. Trends are noted in the proportion of women insured for retired-worker benefits based on their own earnings. An increasing proportion of married women are becoming insured. Unmarried women—widowed, divorced, or single—remain more likely than wives to be insured, but their insured status rates are not higher than they were about a decade ago.

Comparisons of the relative level of retired-worker benefits among women show that the highest benefits were earned by those who never married. Divorced women averaged the next highest benefits, followed by widowed and then married women. Men's average benefits showed the opposite pattern. Comparisons between men and women show little difference between the average benefits for those who never married; divorced women average about 80 percent of the benefit level of divorced men, while married women average retired-worker benefits 58 percent as high as married men's benefits.

* Program Analysis Staff, Office of Research and Statistics, Office of Policy, Social Security Administration. Benefit calculations for this analysis were prepared by Lewis F. Frain, Division of OASDI Statistics, Office of Research and Statistics.

[1] Barbara A. Lingg, "Social Security Benefits of Female Retired Workers and Two-Worker Couples," **Social Security Bulletin**, February 1982, pages 3-24.

Data were not available to estimate the benefits unmarried women might receive as widows or divorced wives based on a former husband's earnings. The retired-worker benefit amounts show the results produced by the women's own work records but do not include any supplemental benefits some may receive as spouses of workers.

In the second part of this article, data on the combined benefits of married women and their husbands, including the potential spouse benefits the married women might receive, are presented. The spouse benefit for wives can equal up to 50 percent of the husband's full retired-worker benefit and is paid only to the extent that it exceeds the wife's own retired-worker benefit.[2] The couples in this study are grouped in three categories based on the wife's entitlement: (1) The wife receives benefits solely as a retired worker; (2) she receives benefits solely as a spouse on her husband's earnings; and (3) she is dually entitled—that is, she qualifies for a retired-worker benefit, but her spouse benefit is higher so she receives an amount equal to the spouse benefit. Among the three types, the highest average benefits were for couples in which the wife would be dually entitled. In these couples, the husbands tended to have relatively high benefits. The lowest benefits were for couples in which the wife would receive only a spouse benefit. The average benefit for all couples is 6 percent higher than for couples in which the wife would receive only a spouse benefit. The data show an increase over past studies in the proportion of wives who are dually entitled.

## Source of Data

The 1978 Exact Match File was used to estimate potential retired-worker benefits of men and women aged 55-59 in 1978. The Exact Match File links the March 1978 Current Population Survey with Social Security earnings records. Those aged 55-59 who reported they were already receiving Social Security benefits—disability beneficiaries and widow(er)s or spouses who receive benefits because of entitled children in their care—were excluded from this analysis.

Potential benefits were estimated for sample persons based on their past earnings records and their assumed earnings between 1977 and the year in which they would turn age 62. Those aged 55-59 would reach age 62 in 1982-86. They were assumed to continue to earn at their relative annual rate in 1977, up through the year before they reach age 62. Benefit data presented are full amounts, the Primary Insurance Amounts (PIA's). The PIA is the basic amount before any reduction for early retirement or increment for delayed retirement. No attempt was made to predict which persons would opt for early or delayed retirement benefits. Therefore, the benefits estimated here do not reflect actual amounts that might be received. Instead, potential full benefits earned by age 62 are used to show how the past earnings of these preretirement-age women and men would affect their potential benefits. Full benefits are expressed in 1980 dollars and are shown in annual amounts that take into account the cost-of-living increase effective in June 1980.

## Retired-Worker Benefits and Marital Status

In 1978, when the persons in the study were aged 55-59, the large majority were married, as the following tabulation shows:

| Marital status | Men | Women |
|---|---|---|
| Total percent | 100 | 100 |
| Married | 84 | 72 |
| Separated | 3 | 3 |
| Widowed | 2 | 13 |
| Divorced | 6 | 7 |
| Never married | 6 | 4 |

As the persons in this sample age, of course, fewer remain married as more, particularly women, survive their spouses. In 1980, for example, of those aged 65-74, 79 percent of the men and 48 percent of the women were married. Of those aged 75 and older, 68 percent of the men—but only 22 percent of the women—were married and living with their spouses.[3] Although the sample members' marital status may change, they are classified here by their marital status at ages 55-59 to show how differences in earnings among marital status groups would affect their potential benefits as retired workers.

### Insured Status for Retired-Worker Benefits

To be insured for retired-worker benefits by age 62, the persons in the sample needed at least one calendar quarter of covered employment for each year elapsed between 1950 and the year they would reach age 62. As noted, those who had covered earnings in 1977—the last year for which Social Security earnings were recorded for this study—were assumed to continue earning at the same relative rate up to the year they would reach age 62.

---

[2] Husbands may also receive spouse benefits based on the wife's earnings. Very few men receive spouse benefits, however, because their own retired-worker benefits are usually higher than the spouse benefit.

[3] "Marital Status and Living Arrangements: March 1980," **Current Population Reports** (Series P-20, No. 365), Bureau of the Census, Department of Commerce, October 1981.

The women's likelihood of having worked long enough by age 62 to qualify for retired-worker benefits varied by marital status (table 1). Married and separated women were least likely to become insured as workers, although 58 percent were insured. Women widowed by ages 55-59 were somewhat more likely to gain insured status—64 percent are projected to qualify for retired-worker benefits. The divorced and never-married women were the most likely to be insured—80 percent of each group are projected to have worked long enough to qualify for benefits as retired workers.

Men in all marital status groups were very likely to be insured. About 95 percent of married, widowed, and separated men were insured, as were 89 percent of divorced men, and 77 percent of the small group of never-married men.

**Trend for married women.** In 1969 the Retirement History Study (RHS) found that about 52 percent of the wives approaching retirement age were insured for retired-worker benefits; [4] this study found 58 percent in 1978. The trend, therefore, is toward an increasing proportion of married women to be insured for retired-worker benefits.

This trend is also evident in the Lingg study of aged women already receiving benefits in 1976. Of married women on the benefit rolls, the younger ones were more likely to qualify as retired workers: About half the wives aged 65-69, but only a third of those aged 75 and older, were insured.

**Trend for unmarried women.** The insured status of unmarried women appears to have changed very little over the past few years. The Retirement History Study sample included unmarried women aged 58-63 in 1969. By 1974, the following proportions of those women had established entitlement to benefits as retired workers: [5]

| Marital status | Percent |
|---|---|
| Widows | 67 |
| Divorced women | 84 |
| Never-married women | 80 |

The proportions are little different from those estimated here for unmarried women aged 55-59 in 1978; that is, 64 percent of widows and about 80 percent of divorced and never-married women are projected to qualify for retired-worker benefits. Although the unmarried women remain more likely than wives to be insured, their insured status rate does not appear to be increasing along with that of wives. These trends reflect the fact that the increase in female labor-force participation rates since 1950 has occurred primarily among married women.

Women widowed before retirement age are more likely to be insured than those widowed later. The Lingg study provides information on the proportion of all aged widows who qualified for retired-worker benefits in 1976; about half of all those receiving benefits at age 65 or older qualified as retired workers. They would include women who became widowed after retirement as well as those widowed earlier. In contrast, this study and the Retirement History Study indicate about two-

[4] Alan Fox, "Earnings Replacement Rates for Retired Couples: Findings From the Retirement History Study," **Social Security Bulletin,** January 1979, pages 27-28. Of the 5,352 couples, in 589 cases the wife was receiving disability benefits, survivor benefits, or benefits unclassified. Of the remainder, 52 percent were insured as retired workers and 48 percent were estimated to qualify only as wives.

[5] Unpublished tabulations from the RHS by Gayle Thompson Rogers, Division of Retirement and Survivors Studies, Office of Research and Statistics, Office of Policy, Social Security Administration.

thirds of the women widowed before they reached retirement age are insured.

### Average Retired-Worker Benefits

Among men and women, the amounts of potential full retired-worker benefits varied by their marital status. Among women, the never-married had the highest average benefit, followed by the divorced, widowed, and married women. The married women's average potential retired-worker benefit was about 70 percent as high as that of the never married. Men's benefits showed the opposite pattern: Husbands had the highest average, followed by widowed, divorced, and never-married men. The average for never-married men was about 80 percent as high as that for husbands. Among both men and women, the lowest average benefits were for those separated from their spouses. The insured status and average potential benefits for women by marital status are summarized in the following tabulation:

| Marital status | Percent insured as retired workers | Average annual full retired-worker benefits for women | |
|---|---|---|---|
| | | Amount | Percent of average for men |
| Total women | 61 | $3,050 | 62 |
| Married | 58 | 2,920 | 58 |
| Separated | 59 | 2,840 | 71 |
| Widowed | 64 | 3,060 | 66 |
| Divorced | 80 | 3,440 | 81 |
| Never married | 80 | 4,070 | 101 |

Among marital status groups, the difference between men's and women's average benefits varied greatly. Among the never married, there was practically no difference. Divorced women's benefits averaged 81 percent as much as divorced men's. Retired-worker benefits for married women averaged only 58 percent of the average for married men.

The Social Security benefit formula is weighted to provide higher benefits in relation to past earnings for those with low rather than high past earnings. Consequently, the difference in potential full-benefit amounts between groups is not as great as the difference between earnings levels that underlie the benefits.

### Spouse and Survivor Benefits

A person's retired-worker benefit may be supplemented by a spouse or survivor benefit. A spouse can receive up to 50 percent of the worker's benefit. A widow or widower can receive up to 100 percent of the deceased worker's benefit. A divorced person whose marriage lasted 10 years or longer is eligible for the same types of benefits payable to spouses or widow(er)s. In all cases, the spouse or survivor benefit is paid only to the extent it exceeds the person's own benefit as a worker. Practically all (99 percent) of those who receive benefits as spouses or survivors are women.

For this analysis, spouse benefits could be estimated only for the married women living with their husbands in 1978. Data were not available to estimate spouse and survivor benefits for the widowed, divorced, or separated women. The retired-worker benefit estimates are based on the women's own work records but do not show the total benefits some may receive.

## Couples' Retirement Benefits

The remainder of this article focuses on couples in which the wife was aged 55-59 in 1978 and the husband was present and insured for retired-worker benefits. The estimates in this section reflect the husband's and wife's combined full benefits, including spouse benefits.

### Wife's Benefit Type

As noted, married couples are classified into three groups according to the wife's benefit as: (1) retired worker only, (2) spouse only, and (3) dually entitled. Those who are dually entitled would be insured for a retired-worker benefit that is less than the spouse benefit; therefore, they receive an amount equal to the spouse benefit.

Of the married women, an estimated 43 percent would receive only spouse benefits. The 57 percent qualifying for retired-worker benefits included 33 percent who would receive only the retired-worker benefit and 24 percent who would be dually entitled.

The rate of potential dual entitlement among these wives is considerably higher than that found for older married women already on the benefit rolls, as the following tabulation shows:

| Benefit type for married women | Aged 62 and older in 1976 (actual entitlements) | Aged 55-59 in 1978 (potential entitlements) |
|---|---|---|
| Total percent | 100 | 100 |
| Retired worker | 46 | 57 |
| Retired worker only | 33 | 33 |
| Dually entitled | 13 | 24 |
| Spouse benefit only | 54 | 43 |

At least three explanations may account for the projected higher rate of dual entitlement for the younger wives. First, the benefits estimated in this study do not take account of the reduction applied to benefits claimed before age 65. If benefits are claimed at age 62, the retired-worker benefit is reduced by 20 percent, and the spouse benefit is reduced by 25 percent (to 37.5 percent of the husband's full benefit). The greater reduction in the spouse benefit could cause some wives, who are here projected to become dually entitled, to lose dual entitlement if they claim reduced benefits. The spouse benefit could be reduced to less than the retired-worker benefit.

Second, the level of husbands' benefits relative to those of their wives may be rising. During the past decade, the maximum annual earnings subject to Social Security taxes, and therefore counted toward Social Security benefits, has increased more rapidly than earnings levels, so proportionately more of a higher earner's total wage is taxed and credited for benefit computation purposes. As a result, the maximum retired-worker benefit for those reaching retirement age in the near future is considerably higher than it was a decade ago. In 1970, the maximum benefit for an age-65 retiree was 13 percent higher than that for a worker who had always earned about the average wage. For a person retiring at age 65 in 1983, the maximum benefit would be about 28 percent higher than the benefit for a person who had always earned the average wage. Because married men, as a group, tend to be relatively high earners, the higher relative level of the maximum attainable retired-worker benefit could result in more dual entitlement among working wives.

Third, one might expect that as more wives meet the minimum insured-status requirements, a larger proportion would qualify for low benefits based on their own earnings and thus become dually entitled. This explanation would be supported by data showing that more female retired workers were becoming entitled to the minimum retired-worker benefit.[6] This has not been the case. The proportion of all female workers awarded the minimum benefit dropped from 26 percent to 16 percent between 1971 and 1977.

## Benefit Amounts for Wives

Among married women, the lowest benefits would be received by those who qualified for benefits only as wives—an average of $2,520 (table 2). The dually entitled wives averaged somewhat more—$2,820. Married women who would receive only retired-worker benefits had the highest individual benefits, averaging $3,580.

[1] Includes only couples in which the husband had a PIA.

## Benefit Amounts for Husbands

It is sometimes hypothesized that husbands whose wives earn retired-worker benefits would have lower average lifetime earnings and therefore lower retired-worker benefits than husbands whose wives did not work in covered employment long enough to become insured. This hypothesis is based on the fact that a married woman is more likely to be in the labor force when her husband's earnings are low. A wife's likelihood of being in the labor-force, however, is also influenced by her age, the presence and ages of children, her education, and her potential wage rate. These factors may offset the effect of the husband's earnings level.

The hypothesis that husbands of insured wives would have lower benefits than husbands of noninsured wives is not supported by these data. The average, full benefits for the two groups of husbands were about the same—$5,060 for men whose wives were insured, and $5,040 for men whose wives would qualify only for spouse benefits.

Of couples in which both partners qualify for retired-worker benefits, husbands of dually entitled wives had higher average benefits than did husbands whose wives would receive only retired-worker benefits. This situation occurs because, by definition, couples with a dually entitled wife are those in which the husband's retired-worker benefit is relatively high (more than twice the minimum benefit), and the wife's retired-worker benefit is relatively low (less than half the maximum).

---

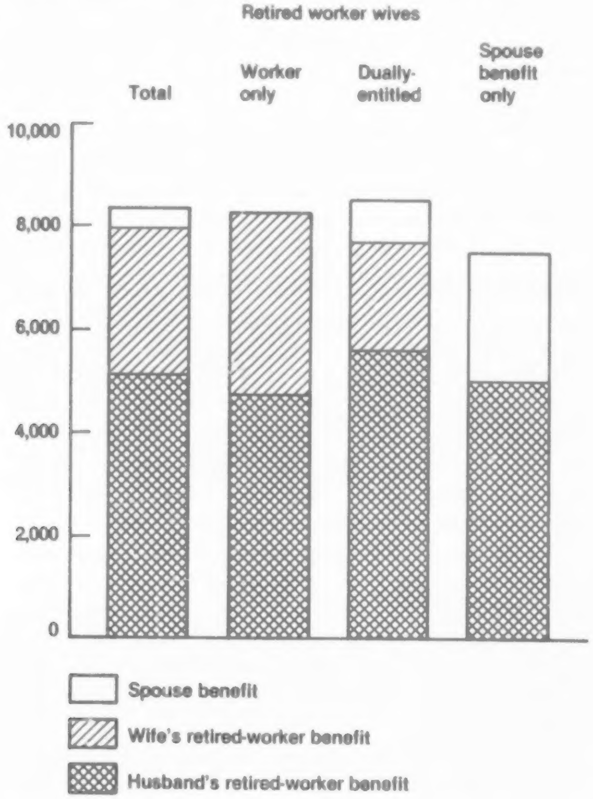
[6] The minimum retired-worker benefit is paid to those meeting the insured status requirement but whose lifetime earnings are so low that the benefit based on those earnings would be less than the statutory minimum. Benefit projections for this study are based on the law in effect in December 1980. The minimum benefit for new retirees was then frozen at $122 for those reaching age 62 after 1979.

## Couples' Combined Benefits

When husbands' and wives' potential full benefits were combined, the average for couples composed of two retired workers was about 10 percent higher than the average for couples in which the wife would receive only a spouse benefit. Of couples made up of two retired workers, the average combined benefit was slightly higher when the wife would be dually entitled than when she would receive only retired-worker benefits. Husbands of dually entitled wives tended to have relatively high benefits. Chart 1 illustrates the relative level and composition of couples' benefits by the wife's benefit type.

When all couples are combined, the projected average couples' benefit is 6 percent higher than that for couples in which the wife would receive a spouse benefit only. Data on the latter type of couples are routinely tabulated from the administrative record system. This study suggests that the average benefit for worker/wife beneficiary couples entering retirement with the wife entitled only to a spouse benefit would understate the average for all couples entering retirement by 6 percent.

**Chart 1.**—Level and composition of couple's average, combined, potential benefits, by wife's benefit type



The Lingg study [7] of all retired couples on the benefit rolls showed a somewhat greater difference between average benefits for two-worker couples and couples in which the wife received only spouse benefits. The two-worker couples averaged benefits about 18 percent higher than worker/wife beneficiary couples. Including the two-worker couples in the average for all couples would raise the average by 9 percent. One explanation for the smaller difference in this study may be that the couples in this study are more nearly the same age; in all of the couples, the wife was aged 55-59 in 1978. Couples currently on the rolls include a wider age range. The wives were aged 62 and older. Those couples in which the wife received only spouse benefits are disproportionately represented among the oldest couples, and they tend to have lower combined benefits than do younger retired couples.

## Potential Survivor Benefits

As noted, women who are married when they approach retirement age are very likely to become widowed as they grow older. Social Security pays survivor benefits to aged widows and widowers based on the deceased spouse's earnings record. The survivor benefit can be up to 100 percent of the benefit that the deceased worker would receive if still alive. The survivor benefit is paid only to the extent that it exceeds the survivor's own benefit as a worker. If the deceased worker had claimed benefits before age 65, the benefit reduction for early retirement would generally carry over to the survivor's benefit. If the survivor benefit is claimed before age 65, it is also reduced—if claimed at age 62, it would be 82.5 percent of the worker's full benefit. If claimed at age 60, it would be 71.5 percent.

Table 3 illustrates the potential full survivor benefits (before any reduction for early benefit claims) available to whichever spouse outlived the other, among the preretirement-age couples. In 94 percent of the couples, the husband's full benefit would be larger than the wife's. The husband's benefit, therefore, would usually be the basis for the wife's survivor benefit if she were widowed; it would continue to be the husband's benefit if he outlived his wife.

For most two-worker couples approaching retirement

---

[7] Barbara A. Lingg, **op. cit.**

**Table 3.**—Potential full survivor benefits for couples in which the wife was aged 55–59 in 1978 and the husband was insured

[Annual amounts in 1980 dollars]

| Amount of potential annual full benefit | Total | Wife's PIA higher than husband's | Husband's PIA higher than wife's | Wife not insured |
|---|---|---|---|---|
| Total number (in thousands) | 3,854 | 239 | 1,969 | 1,646 |
| Total percent | 100 | 100 | 100 | 100 |
| $1,500–$1,999 | 2 | 3 | 1 | 4 |
| $2,000–$2,999 | 6 | 16 | 4 | 7 |

| $4,000–$4,999 | 17 | 23 | 18 | 16 |
| $5,000–$5,999 | 38 | 24 | 42 | 36 |
| $6,000–$6,999 | 26 | 4 | 28 | 27 |
| Average survivor benefit | $5,110 | $4,090 | $5,300 | $5,040 |

age now, the potential survivor benefit would be determined by the husband's earnings record. The large majority of working wives in such couples would become dually entitled if widowed: The 57 percent of wives insured as retired workers include 51 percent who would be dually entitled as widows and 6 percent whose own retired-worker benefit would exceed the potential survivor benefit.

Data on all aged widows on the benefit rolls indicate a much lower rate of dual entitlement. Of all widows receiving benefits at age 65 or older in 1976, the 49 percent insured as workers include 17 percent who were dually entitled and 32 percent who received only a retired-worker benefit because that amount exceeded any potential survivor benefit on the deceased husband's earnings record.

The reasons for this difference between actual and projected dual-entitlement rates for widows is a subject for further study. Information on the deceased husband's earnings and the timing of widowhood might help explain the lower rate of dual entitlement among retired workers who are aged and widowed.

# Notes and Brief Reports

## Effects of OASDI Benefit Increase, June 1981*

Beneficiaries of the Old-Age, Survivors, and Disability Insurance (OASDI) program received an 11.2-percent cost-of-living increase in benefits effective June 1981. This increase, the seventh automatic increase since 1975, was reflected in benefit checks issued early in July.

Automatic benefit increases are tied by statute to rises in the Consumer Price Index (CPI). They are initiated whenever the CPI for the first quarter of the year exceeds the CPI for the base quarter by at least 3 percent. The base is defined as either the first quarter of the last year in which there was an automatic adjustment or any quarter in which a general benefit increase is effective. The June 1981 increase was based on the percentage rise in the CPI in the first quarter of 1981 over the first quarter of 1980.

### Benefit Amounts

The initial effects of the 11.2-percent cost-of-living increase can best be demonstrated by comparing the monthly benefit amounts payable to beneficiaries immediately before and after the increase. Table 1 presents such data for various types of beneficiaries as well as for the total beneficiary population. The cost-of-living increase resulted in a rise of $1.2 billion in total monthly benefits payable to 35.8 million persons receiving OASDI benefits at the end of May 1981. Retired workers and their auxiliaries accounted for 68 percent of the

| Special age-72 beneficiaries [4] | 83,932 | 8,766 | 9,744 | . . . | . . . | . . . | 11.2 |

[1] Includes transitionally insured beneficiaries.

[2] Reflects workers' compensation offset provision. Since the amount of the offset generally remains constant, net increases in benefits exceed the cost-of-living increase. For example, a beneficiary with a PIA of $200 before the cost-of-living increase and an offset of $100 receives a benefit of $100 before the increase and $122.40 [$200 × 1.112 - $100] afterwards, or a net increase of 22.4 percent. Auxiliaries are similarly affected except their benefits are offset first. Thus, their percentage increases are even greater than that of the worker.

[3] Estimated.

[4] Authorized by 1966 legislation for persons aged-72 and over not insured under the regular or transitional provisions of the Social Security Act.

increase, disabled workers and their auxiliaries for 12 percent, and survivors for 20 percent.

As expected, average monthly benefits payable to workers and/or their auxiliaries increased by roughly the same percentage as the cost-of-living increase. Average monthly benefits payable to retired workers were $427.01 for men and $331.93 for women—increases of $43.06 and $33.49, respectively. Benefit payments to male disabled workers increased $46.05, raising their average amount to $454.13. For female disabled workers the average increase was $33.36, resulting in an average monthly benefit amount of $329.55. Increases for auxiliaries of living workers ranged from $12.64 for spouses of disabled workers to $19.51 for spouses of retired workers. Among survivor beneficiaries, average benefit increases ranged from a low of $22.98 for disabled widows and widowers to a high of $35.13 for nondisabled widows and widowers. The above increases resulted in average benefits of $227.48 for the former and $347.73 for the latter.

Social Security benefits are based on a worker's Primary Insurance Amount (PIA). In almost all instances, the PIA is derived from the individual's covered earnings averaged over his or her working lifetime. The full PIA is payable to a retired worker who becomes entitled to benefits at age 65 or to a disabled worker at any age. A retired worker may receive benefits as early as age 62 but his or her PIA is subject to a reduction of 5/9 of 1 percent for each month of entitlement before age 65. Widows and widowers entitled at age 65 also receive a benefit amount equal to the full PIA, provided that the deceased spouse did not receive a retirement benefit befor age 65. A widow(er)'s benefit is subject to a reduction of 19/40 of 1 percent for each month of entitlement between the ages of 60 and 65 (maximum reduction of 28.5 percent) and a disabled widow(er)'s benefit is subject to an additional reduction of 43/240 of 1 percent for months before age 60 (maximum reduction of 50 percent). Other auxiliaries of retired, disabled, and deceased workers are entitled to set proportions of the PIA, subject to the family maximum.

Before 1979, a worker's PIA was determined by calculating his or her Average Monthly Earnings (AME) for a specified number of highest earning years and then finding the corresponding PIA from a table. The 1977 Amendments to the Social Security Act introduced a new method for computing the PIA for workers who attain age 62, become disabled, or die in 1979 or later whereby the worker's earnings are first *indexed* to reflect average wage levels in the economy during his or her working years before the averaging of earnings takes place. A formula is then applied to the result—known as the Average Indexed Monthly Earnings (AIME)—in order to arrive at the PIA. For workers who attained

[1] The PIA's of workers whose AIME's are $135 or less are frozen at $122. Following specific guidelines, the current cost-of-living increase may be added to the minimum PIA as well as to the benefit amount of certain beneficiaries.

[2] The 1980 Amendments to the Social Security Act provide for different family maximum amounts for disability cases for those who become entitled to disability benefits beginning with July 1980. For disability beneficiaries with an AIME on June 1981 of $230 or less, the family maximum is equal to the PIA. If the AIME is $231 through $496, the PIA is equal to 85 percent of AIME plus the cost-of-living increase; if the AIME is greater than $496, the maximum is equal to 150 percent of the PIA.

[3] A widow(er)'s benefit amount is limited to the amount the spouse would have been receiving if still living but not less than 82 1/2 percent of the PIA.

[4] Sole survivor.

**Table 3.**—Minimum and maximum monthly retired-worker benefits payable to individuals who retired at age 65, 1940–81[1]

| Year attained age 65[2] | Minimum benefit | | Maximum benefit[3] | | | |

| 1981 .... | 153.10 | 170.30 | 677.00 | ....... | 752.90 | ....... |

[1] Based on AME method.

[2] Assumes retirement at beginning of year.

[3] Benefit for both men and women is shown in men's column, except where benefits shown separately. Assumes no prior period of disability.

[4] Effective for February 1968.

age 62, became disabled, or died in 1981, the formula is as follows:

> 90 percent of the first $211 of AIME, plus 32 percent of AIME in excess of $211 through $1,274, plus 15 percent of AIME in excess of $1,274.

The 11.2-percent cost-of-living increase is then added to the above result. Table 2 shows examples of benefits payable to various types of beneficiaries and family groups at selected AIME levels.

The 1977 amendments also introduced a transitional guarantee provision to protect workers who were nearing retirement age when the amendments went into effect. This provision is applicable only to workers who attain age 62 from January 1979 through December 1983, had some covered earnings before 1979, and were not eligible for a disability benefit before 1979. It guarantees the worker a benefit amount derived from his or her AME using the December 1978 PIA tables if it results in a higher benefit amount than under the AIME method. This computation method may also be used to compute benefits for survivors of workers who were eligible for benefits but never applied for them.[1]

Effective June 1981, the highest PIA for a worker who retired at age 65 and who did not have a prior period of disability is $752.90, based on an AME of $846.[2] Minimum and maximum benefits payable to workers retiring at age 65 during the period 1940–81 are shown in table 3.

---

[1] For a more complete discussion and analysis of the computation methods, see Steven F. McKay, **Computing a Social Security Benefit After the 1977 Amendments** (Actuarial Note No. 100), Office of the Actuary, Social Security Administration, February 1980, and Steven F. McKay and Bruce D. Schobel, **Effects of the Various Social Security Benefit Computation Procedures** (Actuarial Note No. 86), Office of the Actuary, Social Security Administration, July 1981.

[2] The AME method is applicable because the worker attained age 62 before 1979.

# Gifts to the Trust Funds*

A small number of persons each year—grateful for benefits they or their relatives have received and/or worried about the solvency of the trust funds—give money to the Social Security system. Money gifts or bequests may be accepted by the Managing Trustee for deposit in any one or more of the four Social Security trust funds: Old-Age and Survivors Insurance (OASI), Disability Insurance (DI), Hospital Insurance (HI), and Supplementary Medical Insurance (SMI).

Acceptance of these gifts is authorized by section 201(i) of the Social Security Act. It specifies that the gifts must be unconditional, except that the donor may designate to which fund the gift should be donated. If no fund is designated, the gift is credited to the OASI Trust Fund. The section was added to the Act by the 1972 amendments. Before then, bequests naming Social Security or a trust fund as a beneficiary could not be accepted. Occasionally, this caused problems in the final settlement of estates.

---

*Prepared by the Office of Research and Statistics, Office of Policy, Social Security Administration.

In a report (H.R. 92-231) on these amendments the Committee on Ways and Means made clear that additional revenue was not the primary reason for enactment. "... it seems unjustifiable that an act presumably motivated by appreciation for, and confidence in, a Government program should cause complicated and perhaps interminable legal problems for the survivors."

As was anticipated, total revenue from gifts to the trust funds has been quite small. Gifts to the trust funds for calendar years 1974-80 are shown in table 1. The greatest amount received in any one year was $91,949.88 in 1979. Excluding 1974 as an atypical startup year, the average annual amount has been $39,847.

**Table 1.**—Amount of gifts to the trust funds, calendar years 1974-80

| Year | Total | OASI | DI | HI | SMI |
|---|---|---|---|---|---|
| 1974 ..... | $12,114.16 | $136.23 | ... | $8,477.93 | $3,500.00 |
| 1975 ..... | 14,732.46 | 14,732.46 | ... | ... | ... |
| 1976 ..... | 59,356.31 | 40,938.50 | $100.00 | 15,834.41 | 2,483.40 |
| 1977 ..... | 10,274.73 | 10,214.73 | ... | 10.00 | 50.00 |
| 1978 ..... | 50,533.67 | 50,092.97 | 440.70 | ... | ... |
| 1979 ..... | 91,949.88 | 88,960.88 | 2,989.00 | ... | ... |
| 1980 ..... | 30,612.08 | 30,612.08 | ... | ... | ... |

Also, the typical gift has been small. Table 2 contains a distribution of the 59 gifts received by the OASI Trust Fund in 1980 by size of gift. It shows that almost two-thirds of the gifts were less than $100. The median gift size was $50. However, eight of the 59 gifts were more than $1,000. The largest gift ever received was a bequest amounting to $43,239.19 in 1978.

Although section 201(i) was originally passed with bequests in mind, many gifts are received from living persons. Most of the very small ones are individual contributions. One person, for example, donated $13.11. She arrived at that amount by applying 5.85 percent, the employee tax rate then in effect, to her benefit amount and donated it to help " 'shore up' the sagging, dwindling Social Security fund."

**Table 2.**—Number of gifts to the OASI Trust Fund, by size of gift, calendar year 1980

| Size of gift | Gifts | |
|---|---|---|
| | Number | Percentage distribution |
| Total............ | 59 | 100.0 |
| $10.00 or less........... | 23 | 39.0 |
| $10.01-$100.00.......... | 14 | 23.7 |
| $100.01-$1,000.00....... | 14 | 23.7 |
| $1,000.00-$5,000.00..... | 5 | 8.5 |
| $5,000.01-$10,000.00.... | 2 | 3.4 |
| Over $10,000.00 ........ | 1 | 1.7 |

Some of the larger gifts recorded have also come from living individuals. One donor explained that her father paid less than $500 in Social Security contributions and received benefits for about 20 years. The daughter then donated her $9,000 share of his estate to the trust funds. The largest gift from a living individual was $25,000 in 1979.

Some persons also have volunteered to forgo current benefits in exchange for a refund of Social Security taxes they paid previously, but of course the Social Security Act does not permit the refund of contributions except in cases of overpayments. However, it should be noted that gifts to the trust funds are tax deductible; section 170(c)(1) of the Internal Revenue Code lists the U.S. Government among the educational or charitable organizations to which donations are acceptable.

## Social Security Administration

### Office of Policy, Office of Research and Statistics

**Four Decades of International Social Security Research: A Bibliography of Studies by the Social Security Administration, 1937-80.** 1981. $4.75. 68 pages. SSA Pub. No. 13-11733.

This bibliography lists studies of programs in 35 countries in 14 categories, ranging from administration to old-age, survivors, and invalidity insurance to work injury coverage. An "international" section enumerates multi-country studies. Under each section, entries appear in reverse chronological order.

**Program and Demographic Characteristics of Supplemental Security Income Beneficiaries, December 1979,** by Arthur L. Kahn. 1981. 38 pages. SSA Pub. No. 13-11977.

Characteristics tabulated include average benefit amounts, living arrangements, income, age, sex, and race. The report also contains a summary of findings and an outline of program provisions as of July 1980.

**Supplemental Security Income, State and County Data, December 1980,** compiled by Theodosia P. Rasberry. 1981. 137 pages. SSA Pub. No. 13-11976.

This compilation covers both beneficiary counts and amounts of federally administered payments. A brief description of procedures introduces the detailed tabulations.

* Orders for items listed should be directed to publishers and booksellers. Federal publications for which prices are listed should be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C., 20402.

## Child Welfare and Families

**Disabled Children in the Supplemental Security Income Program,** by Myles Maxfield, Jr. and Allen Kendall. Washington, D.C.: Social & Scientific Systems, Inc. and Mathematica Policy Research, Inc., 1981. 59 pages.

This report addresses five questions about disabled children receiving Supplemental Security Income payments: How much extra expense is incurred by families of such children because of the child's disability? Are the extra expenses of the families of such children met by their SSI payments? How much income from other transfer programs is received by families of such children? Why have such children who are living in foster care situations not been adopted? How consistent are the administrative data on these SSI cases with data collected by an independent survey?

## Economics

**A Glossary of Terms Used in the Federal Budget Process** (3rd edition). Gaithersburg, Md.: U.S. General Accounting Office, 1981. 136 pages.

This glossary is a basic reference document of standardized definitions. The emphasis is on budget terms, but relevant accounting, economic, and tax terms are also defined. New features of this edition are an illustrated overview of the Federal budget process and four appendixes that supplement many of the definitions.

**Perspectives on Income Security and Social Services and an Agenda for Analysis.** Gaithersburg, Md.: U.S. General Accounting Office, 1981. 116 pages.

This report provides a perspective on the major issues regarding income security and social services that comprise the largest category of Federal expenditures. It identifies present concerns, forecasts developments, and briefly discusses GAO's approach to addressing these issues.

## Foreign

**Labour Force Statistics.** Washington, D.C.: The Organization for Economic Cooperation and Development, 1981. $22. 450 pages.

This volume provides general tables, graphs, and country tables that present data on population, crude birth rates, percent of population aged 15–64, percent changes in civilian employment, participation rates, total labor force, employment, civilian employment by sector, and much more. Provides data for 1968–79.

**Member Directory of Statistical Societies, 1981.** Voorburg, Netherlands: Permanent Office. International Statistical Institute. 1981. 165 pages.

The directory lists national and international societies and provides details about their officers, secretarial addresses, objectives and activities, and meetings and publications. It also includes the names and addresses of current directors of both national and international statistical agencies throughout the world.

**Vocational Rehabilitation and Employment of the Disabled.** Washington, D.C.: International Labor Office, 1981. $8.55. ISBN 92-2-002571-X.

This glossary offers definitions that serve as guidelines and reflects important changes taking place in vocational rehabilitation and employment.

## Retirement and the Elderly

**Controversial Issues in Gerontology** (Volume 10 in the Springer Series on Adulthood and Aging), edited by Harold J. Weishow. New York: Springer Publishing Company, 1981. $22.95. 266 pages. ISBN 0-8261-3100-X.

This book presents contrasting positions found in professional literature, thus challenging the traditional and often overoptimistic theories and assumptions that pervade gerontology today.

**Old Age on the New Scene** (Volume 9 in the Springer Series on Adulthood and Aging), edited by Robert Kastenbaum, New York: Springer Publishing Company, 1981. $19.95. 332 pages.

This anthology highlights diverse developments in the field of psychosocial gerontology. The authors explore topics in such areas as images, mental life, developmental psychology, self-actualization, and death.

**Retirement Income Opportunities in an Aging America: Coverage and Benefit Entitlement,** by Sylvester J. Schieber and Patricia M. George. Washington, D.C.: Employee Benefit Research Institute, 1981. $10. 131 pages. ISBN 0-86643-012-1.

This work provides a comprehensive overview of American retirement income programs. It describes their relationships and future prospects for program growth and benefit provision.

## Welfare

**Income Support: Conceptual and Policy Issues** (Maryland Studies in Public Philosophy), edited by Peter G. Brown and others. Towowa, N.J.: Rowman and Littlefield, 1981. $27.50. 378 pages. ISBN 0-8476-6969-6.

This book explores the conceptual and moral issues that lie beyond the intense and widespread dissatisfaction in recent decades with our national income support or welfare system.

M-14.—Estimated number of beneficiaries with monthly benefits in current-payment status, by age group and by type of benefit, 1940-81 51
M-15.—Number of monthly benefits awarded to retired workers and their spouses and children and to survivors, 1940-81 52
M-16.—Number of monthly benefits awarded to retired workers and their spouses, by payment status at time of award, 1950-81 53
M-17.—Number of monthly benefits awarded to disabled workers and their spouses and children, 1957-81 53

**Supplemental Security Income**

M-18.—Number of persons receiving federally administered payments and total amount, by reason for eligibility, October 1981 54
M-19.—Number of persons receiving federally administered payments and total amount, 1974-81 54
M-20.—Number of persons initially awarded federally administered payments, by reason for eligibility, 1974-81 54
M-21.—Number of persons receiving federally administered payments, by reason for eligibility and State, October 1981 55
M-22.—Amount of payments, Federal SSI payments, and federally administered State supplementation, by State, October 1981 55
M-23.—Amount of combined Federal SSI payments and federally administered State supplementation, by reason for eligibility and State, October 1981 56
M-24.—Average monthly amount of combined Federal and State payments in States with federally administered State supplementation, by reason for eligibility and State, October 1981 56
M-25.—Number of persons, total, and average State payment amount to persons under State-administered State supplementation programs, by reason for eligibility, 1974-81 57
M-26.—Number of persons receiving State-administered State supplementation and total and average amount, by reason for eligibility and State, August 1981 58
M-27.—Number of persons receiving State-administered State supplementation only and total and average amount, by reason for eligibility and State, August 1981 59

**Public Assistance**

M-28.—Recipients and average monthly payments per recipient, by program, 1940-80 60
M-29.—Total money payments, by program and emergency assistance, 1945-80 61
M-30.—Total medical vendor payments, by program, 1951-78 62
M-31.—Aid to families with dependent children: Recipients of cash payments and total amount, by State, December 1980 63
M-32.—Aid to families with dependent children, unemployed-father segment: Recipients of cash payments and total amount, by State, December 1980 64
M-33.—Aid to families with dependent children, foster-care segment: Recipients of cash payments and total amount, by State, December 1980 65
M-34.—Emergency assistance: Families receiving assistance and amount of payments, by State, December 1980 66
M-35.—General assistance: Recipients of cash payments and total amount, by State, December 1980 67

**Black Lung Benefits**

M-36.—Number of beneficiaries, average monthly family amount, and total monthly family amount in current-payment status, 1970-81 68

**Unemployment Insurance**

M-37.—Selected data on State programs, 1940-81 69
M-38.—Selected data by State, March 1981 70

**Economic Indicators**

M-39.—Gross national product and personal income, by type, 1950-81 71
M-40.—Civilian population and labor force, 1940-81 72
M-41.—Consumer price index for urban wage and clerical workers, 1940-81 73
M-42.—Consumer price index for all urban consumers, by month, 1978-81 74
M-43.—Medical care component of the consumer price index for urban wage and clerical workers, 1940-81 75
M-44.—Medical care component of the consumer price index for all urban consumers, 1978-81 76

## Table M-1.—Public income-maintenance programs: Cash benefit payments, 1940–81

[In millions; includes payments outside the United States and benefits to spouses and children where applicable]

| Period | Total[1] [2] | Retirement, disability, and survivor benefits | | | | | | | | Unemployment benefits | | Temporary disability benefits | | Workers' compensation benefits[14] | Public assistance payments[2] [15] | Supplemental security income payments[16] |

[1] Emergency relief funds of $1,630.3 million in 1940 total, not included elsewhere. Includes training allowances to unemployed workers under Area Redevelopment Act and Manpower Development and Training Act for 1961–75, not shown separately.

[2] Beginning December 1980, includes public assistance payment revisions for 1940–79.

[3] Retirement and survivor benefits beginning 1940; disability benefits beginning 1957. Beginning Oct. 1966, includes special benefits authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[4] Includes annuities to widows under joint-and-survivor election before 1947. Beginning Feb. 1967, includes supplemental annuities for career railroad employees.

[5] Excludes refunds of contributions to employees who leave service.

[6] Includes survivor annuities under joint-and-survivor elections before 1948.

[7] Represents Federal contributory systems other than civil service, Federal noncontributory systems for civilian employees and career military personnel, and systems for State and local government employees. Monthly data not available.

[8] Payments to veterans and survivors of deceased veterans, including special allowances for survivors of veterans who did not qualify under OASDHI (Servicemen's and Veterans' Survivor Benefit Act of 1956) and through June 1973, subsistence payments to disabled veterans undergoing training.

[9] Death payments.

[10] Includes annual and monthly data for railroad retirement, veterans' programs, and Federal civil service retirement. For "other" public employee systems, annual data only.

[11] Annual and monthly totals include regular State unemployment insurance program and payments made by States as agents of the Federal Government under the Federal employees' unemployment compensation program and under the Ex-Servicemen's Compensation Act of 1958. Annual data only for payments under Servicemen's Readjustment Act of 1944, Veterans' Readjustment Act of 1952, Trade Expansion Act of 1962, Disaster Relief Act of 1970, and the temporary and permanent extended unemployment insurance programs. Beginning 1961, includes program in Puerto Rico.

[12] Benefits in Rhode Island (from 1943), in California (from 1947), in New Jersey (from 1949), in New York (from 1950), in Puerto Rico (from 1970), including payments under private plans where applicable. Monthly data not available.

[13] Benefits began 1947.

[14] Under Federal workers' compensation laws and under State laws paid by private insurance carriers, State funds, and self-insurers. Beginning 1959, includes data for Alaska and Hawaii. Monthly data refer only to Federal "black lung" benefits administered by Social Security Administration (starting 1970).

[15] Includes aid to families with dependent children and general assistance. Through 1973 includes old-age assistance, aid to the blind, and aid to the permanently and totally disabled. Includes payments to intermediate-care facilities (July 1968–December 1971), and payments for emergency assistance, beginning July 1969. Includes money payments under medical assistance for the aged (1960–69). Excludes medical vendor payments. Starting 1974, includes money payments to the aged, blind, and disabled in Guam, Puerto Rico, and the Virgin Islands under federally aided public assistance programs.

[16] Supersedes the public assistance programs of old-age assistance, aid to the blind, and aid to the permanently and totally disabled in the 50 States and the District of Columbia, beginning 1974; beginning 1978, in the Northern Mariana Islands. Annual, but not monthly, totals include payments under State-administered supplementary programs.

[17] Data not available.

Source: Based on reports of administrative agencies on a checks-issued basis (including retroactive payments) where available. Data for public assistance and State unemployment insurance programs adjusted monthly, other data adjusted annually.

---

[1] Benefit expenditures from the Federal hospital insurance and supplementary medical insurance trust funds as reported by the U.S. Treasury.

[2] Excludes payments by Railroad Retirement Board for beneficiaries in Canadian hospitals.

[3] Benefits in California and New York (from 1950), including payments under private plans. Monthly data not available.

[4] Benefits under Federal workers' compensation laws and under State laws paid by private insurance carriers, State funds, and self-insurers. Beginning 1959, includes data for Alaska and Hawaii. Monthly data not available.

[5] Federal matching for medical vendor payments under public assistance began October 1950.

[6] Data not available.

Source: U.S. Treasury and unpublished data from administrative agencies.

## Table M-3.—Selected social insurance and related programs: Beneficiaries of cash payments, 1940–81

[In thousands. For explanatory footnotes on programs, see table M-1]

---

[1] Includes dependents.

[2] Beginning October 1966, includes special benefits authorized by 1966 legislation for persons aged 72 and over and not insured under the regular or transitional provisions of the Social Security Act.

[3] Monthly number at end of quarter.

[4] Average number during 14-day registration period.

[5] Average weekly number. Includes regular State unemployment insurance, the Federal employees' unemployment compensation program, and the ex-servicemen's compensation program.

[6] Includes dependents and survivors.

[7] Less than 500.

[8] Data not available.

Source: Based on reports of administrative agencies.

---

[1] Represents contributions of employees, and the self-employed in employments covered by OASDHI under the Social Security Act, on an estimated basis, with suitable subsequent adjustments. Data for earlier years reflect former appropriation bases. Includes deposits by States under voluntary coverage agreements. Employee-tax refunds deducted. Excludes transfer from general revenues.

[2] Excludes transfers between OASDHI system and railroad retirement account under the financial interchange provisions of the Railroad Retirement Act.

[3] Represents employee and Government contributions. Beginning 1968, also includes Foreign Service and contributory survivor programs for Federal judiciary and Tax Court. For civil service, employee share includes voluntary contributions to purchase additional annuity; government share includes Federal and District of Columbia agency contributions and, beginning 1968, Federal payment for current unfunded liability.

[4] Beginning 1959, net of tax refunds. Contributions for hospital insurance of railroad workers are collected and reported with railroad retirement contribution initially and are transferred once a year (usually in August) to the hospital insurance trust fund; data for that month only are adjusted by the Treasury source to reflect the transfer.

[5] Excludes reimbursement from Treasury general funds for cost of benefits for persons not insured for cash benefits under OASDHI or railroad retirement. Includes contributions for hospital insurance coverage of railroad workers (principal amount only), see footnote 4; and, beginning July 1973, premiums for voluntary coverage of uninsured individuals aged 65 and over.

[6] Through 1952 represents deposits in State clearing accounts of contributions plus penalties and interest collected from employers and contributions from employees (3 States in recent years), as reported by State agencies (to Department of Labor, 1950–52). Starting 1953, represents State deposits in (Federal) unemployment trust fund.

[7] Represents taxes paid by employers under the Federal Unemployment Tax Act. Beginning 1961, net of tax refunds. Includes tax proceeds for financing temporary extended unemployment compensation programs for 1958 and 1961. December 1976 figure includes treasury adjustments (minus) for misclassification of two prior month's taxes.

[8] Beginning 1947, also covers railroad temporary disability insurance.

[9] Preliminary data.

[10] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (Oct. 1, 1976).

[1] Equals amounts appropriated (estimated tax collections, subsequently adjusted). Includes deposits by States under voluntary coverage agreements and deductions for refund of estimated employee-tax overpayment. Early years reflect former appropriation bases.

[2] From 1947 to 1951, for benefits with respect to certain World War II veterans. Beginning 1966, for military wage credits, and beginning Dec. 1968 for military credits and Federal payment for special age-72 benefits, see footnote 4.

[3] Includes interfund transfer of interest on reimbursed administrative expenses, 1958 to date (see footnote 6).

[4] Before deductions for (1) SMI premium payments and, when applicable, (2) recoupment of overpayments of hospital and medical service benefits provided to OASI beneficiaries. Includes special benefits for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[5] The purpose of the financial interchange provisions of the Railroad Retirement Act, as amended, is to place the trust funds in the same position in which they would have been had railroad employment always been covered under OASDHI. Negative figures represent transfers to OASI trust fund. Excludes transfers to HI trust fund for hospital insurance coverage of railroad workers (accounted for in table M-7).

[6] Beginning 1951, adjusted for reimbursement to trust fund of small amounts for gifts, sales, or services. Beginning 1953, includes expenses for central and regional office building construction. Except for reimbursements from the appropriate trust fund to Treasury Department for its expenses as incurred, beginning 1957 administrative expenses for OASI and DI were paid initially from OASI trust fund with subsequent reimbursement, plus interest (see footnote 3), from DI trust fund for allocated cost of DI operations. Beginning 1966, subject to subsequent adjustment among all four social security trust funds for allocated cost of each operation.

[7] Book value: includes net unamortized premium and discount, accrued interest purchased, and repayment of interest accrued on bonds at time of purchase.

[8] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[9] Reflects assets of predecessor fund, the old age reserve account, January 1937-December 1939.

[10] Preliminary data.

[11] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (Oct. 1, 1976).

[12] Public Law 96-403 approved October 9, 1980, provides for the reallocation of social security tax receipts between the OASI and DI trust funds for calendar years 1980-81. Transfers from the DI to the OASI fund were required to implement the change retroactive to January 1980. A $3,528,795,000 transfer in October 1980 represented the accumulated tax receipts, and a $120,801,000 transfer in April 1981 was the interest earned on this amount.

[1] Equals amounts appropriated (estimated tax collections, subsequently adjusted). Includes deposits by States under voluntary coverage agreements and deductions for refund of estimated employee-tax overpayment. Early years reflect appropriation bases.

[2] Transfers (principal only) from the railroad retirement account with respect to contributions for disability insurance coverage of railroad workers.

[3] From 1950–51, for benefits with respect to certain World War II veterans. Beginning 1966, for military wage credits, and beginning Dec. 1968, for military credits and Federal payment for special age-72 benefits; see footnote 4.

[4] Includes interfund transfer of interest on reimbursed administrative expenses. 1958 to date (see footnote 6).

[5] Before deductions for (1) SMI premium payments and, when applicable, (2) recoupment of overpayments of hospital and medical service benefits provided to OASI beneficiaries. Includes special benefits for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[6] The purpose of the financial interchange provisions of the Railroad Retirement Act, as amended, is to place the trust funds in the same position in which they would have been had railroad employment always been covered under OASDHI. Negative figures represent transfers to OASI trust fund. Excludes transfers to HI trust fund for hospital insurance coverage of railroad workers (accounted for in table M-7).

[7] Beginning 1951, adjusted for reimbursement to trust fund of small amounts for gifts, sales, or services. Beginning 1953, includes expenses for central and regional office building construction. Except for reimbursements from the appropriate trust fund to Treasury Department for its expenses as incurred, beginning 1957 administrative expenses for OASI and DI were paid initially from OASI trust fund with subsequent reimbursement, plus interest (see footnote 3), from DI trust fund for allocated cost of DI operations. Beginning 1966, subject to subsequent adjustment among all 4 social security trust funds for allocated cost of each operation.

[8] Book value: includes net unamortized premium and discount, accrued interest purchased, and repayment of interest accrued on bonds at time of purchase.

[9] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[10] Preliminary data.

[11] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (Oct. 1, 1976).

[12] Public Law 96–403 approved October 9, 1980, provides for the reallocation of social security tax receipts between the OASI and DI trust funds for calendar years 1980–81. Transfers from the DI to the OASI fund were required to implement the change retroactive to January 1980. A $3,528,795,000 transfer in October 1980 represented the accumulated tax receipts, and a $120,801,000 transfer in April 1981 was the interest earned on this amount.

---

[1] Represents amounts appropriated (estimated tax collections with suitable subsequent adjustments) after deductions for refund of estimated amount of employee-tax overpayment; and, beginning July 1973, premiums for coverage of uninsured individuals aged 65 and over.

[2] Transfers (principal only) from the railroad retirement account with respect to contributions for hospital insurance coverage of railroad workers.

[3] Represents Federal Government transfers from general funds appropriations to meet costs of benefits for persons not insured for cash benefits under OASDHI or railroad retirement and for costs of benefits arising from military wage credits.

[4] Interest and profit on investments after transfers of interest or reimbursed administrative expenses (see footnote 6) and interest on amounts transferred from railroad retirement account (see footnote 3).

[5] Represents (1) payment vouchers on letters of credit issued to fiscal intermediaries under sec. 1816 and (2) direct payments to providers of services under sec. 1815 of the Social Security Act.

[6] Subject to subsequent adjustment among all four social security trust funds for allocated cost of each operation. Fiscal year 1966 includes "tool-up" period from date of enactment of Social Security Amendments of 1965 (July 20).

[7] Book value: Includes net unamortized premium and discount, and, when applicable, accrued interest purchased and repayments on accounts of interest accrued on bonds at time of purchase.

[8] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[9] Preliminary data.

[10] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (Oct. 1, 1976).

[1] Represents voluntary premium payments from and in behalf of the insured aged and (beginning July 1973) disabled.

[2] Represents Federal Government transfers from general funds appropriations to match aggregate premiums paid.

[3] Represents interest and profit on investments, after transfers of interest on reimbursed administrative expenses (see footnote 5).

[4] Represents payment vouchers on letters of credit issued to carriers under section 1842 of the Social Security Act.

[5] Subject to subsequent adjustment among all 4 social security trust funds for allocated cost of each operation. Fiscal year 1966 includes "tool-up" period from date of enactment of Social Security Amendments of 1965 (July 30).

[6] Book value: Includes net unamortized premium and discount, and, when applicable, accrued interest purchased and repayments on account of interest accrued on bonds at the time of purchase.

[7] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[1] At the end of 1980 an estimated 40,000 Railroad Retirement beneficiaries would have been eligible for Social Security benefits had they applied. These persons receive their Social Security benefits as part of their Railroad Retirement annuity and are not included in the above tabulations. Of these 40,000 beneficiaries, 19,000 were retired workers, 5,500 were disabled workers, and 15,500 were spouses and children.

[2] Benefits paid from the OASI trust fund to retired workers and their spouses and children and to all survivors. Includes special benefits authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[3] Benefits paid from the DI trust fund to disabled workers and their spouses and children.

## **Table M-10.**—OASDI cash benefits: Number of monthly benefits in current-payment status for retired workers and their spouses and children and for survivors, 1940–81

[Data contain some duplication arising from dual entitlement; see the **1977–79 Annual Statistical Supplement**, p. 11]

| At end of selected month | Total | Retired workers [1] | Wives and husbands [1,2] | Children [3] | Widowed mothers [4] | Widows and widowers [1,5] | Parents [1] | Persons with special age-72 benefits [6] |
|---|---|---|---|---|---|---|---|---|

[1] Persons aged 65 and over (and aged 62–64, beginning 1956 for women and 1961 for men).

[2] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[5] Includes, beginning September 1965, widows aged 60–61 and entitled surviving divorced wives aged 60 and over; beginning March 1968, disabled widows aged 50–59 and disabled widowers aged 50–61; and, beginning January 1973, nondisabled widowers aged 60–61.

[6] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

## Table M-11.—OASDI cash benefits: Amount of monthly benefits in current-payment status for retired workers and their spouses and children and for survivors, 1940–81

---

[1] Persons aged 65 and over (and aged 62–64, beginning 1956 for women and 1961 for men).

[2] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[5] Includes, beginning September 1965, widows aged 60–61 and entitled surviving divorced wives aged 60 and over; beginning March 1968, disabled widows aged 50–59 and disabled widowers aged 50–61; and, beginning January 1973, nondisabled widowers aged 60–61.

[6] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

## Table M-12.—OASDI cash benefits: Monthly benefits in current-payment status for disabled workers and their spouses and children, 1957-81

| At end of selected month | Number |  |  |  | Amount (in thousands) |  |  |  |
|---|---|---|---|---|---|---|---|---|
|  | Total | Disabled workers [1] | Wives and husbands [2] | Children [3] | Total | Disabled workers [1] | Wives and husbands [2] | Children [3] |
| December: |  |  |  |  |  |  |  |  |
| 1957 | 149,850 | 149,850 | ......... | ......... | $10,904 | $10,904 | ......... | ......... |
| 1958 [4] | 268,057 | 237,719 | 12,231 | 18,107 | 20,425 | 19,516 | $415 | $494 |
| 1959 | 460,354 | 334,443 | 47,914 | 77,997 | 33,907 | 29,765 | 1,727 | 2,414 |

[1] Some years shown in several parts because of amendments changing the benefit provisions.

[2] Persons aged 65 and over (and aged 62-64, beginning 1956 for women and 1961 for men).

[3] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[4] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18-21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[5] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[6] Includes, beginning September 1965, widows aged 60-61 and entitled surviving divorced wives aged 60 and over; beginning March 1968, disabled widows aged 50-59 and disabled widowers aged 50-61; and, beginning January 1973, nondisabled widowers aged 60-61.

[7] July 1957-October 1960, disabled workers aged 50-64; beginning November 1960, disabled workers under age 65.

[8] Includes wife beneficiaries under age 65 with entitled children in their care, and, beginning September 1965, entitled divorced wives.

[9] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

## Table M-14.—OASDI cash benefits: Estimated number of beneficiaries with monthly benefits in current-payment status, by age group and by type of benefit, 1940–81

[In thousands. Adjusted to exclude duplication arising from dual entitlement: See the 1977–79 Annual Statistical Supplement, p. 11]

[1] At the end of 1980 an estimated 40,000 Railroad Retirement beneficiaries would have been eligible for Social Security benefits had they applied. These persons receive their Social Security benefits as part of their Railroad Retirement annuity and are not included in the above tabulations. Of these 40,000 beneficiaries, 19,000 were retired workers, 5,500 were disabled workers, and 15,500 were spouses and children.

[2] Includes spouses and children of disabled workers.

[3] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[4] Fewer than 500.

[5] November data; December data not available.

---

[1] Persons aged 65 and over (and aged 62–64, beginning 1956 for women and 1961 for men).

[2] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[5] Includes, beginning September 1965, widows aged 60–61 and entitled surviving divorced wives, aged 60 and over; beginning March 1968, disabled widows aged 50–59 and disabled widowers aged 50–61; and, beginning January 1973, nondisabled widowers aged 60–61.

[6] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[7] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

[8] The June awards include only those with the new benefit rates.

## Table M-16.—OASDI cash benefits: Number of monthly benefits awarded to retired workers and their spouses, by payment status at time of award, 1950–81

[Number of awards in thousands]

| Period | Retired workers | | | Wives and husbands | | |
|---|---|---|---|---|---|---|
| | Total awards [1] | Currently payable awards | | Total awards [1] | Currently payable awards | |
| | | Number | Percent of total | | Number | Percent of total |
| 1950 | 567 | [2] 550 | [2] 97 | 163 | [2] 155 | [2] 95 |
| 1955 | 910 | 862 | 95 | 289 | 276 | 95 |
| 1960 | 982 | 883 | 90 | 340 | 315 | 93 |

| June [5] | 96 | 81 | 84 | 19 | 16 | 84 |
| July | 152 | 125 | 82 | 33 | 26 | 79 |
| August | 137 | 113 | 82 | 29 | 24 | 83 |
| September | 95 | 75 | 79 | 20 | 15 | 75 |
| October | 113 | 91 | 81 | 23 | 18 | 78 |

[1] Includes awards currently payable and conditional or deferred awards. Conditional or deferred awards are those suspended immediately following determination, chiefly because of earnings of the beneficiary or the worker on whose account benefits are paid; since September 1965 most conditional and deferred awards have been made primarily for the purpose of assuring eligibility for hospital insurance benefits.

[2] Estimated on basis of awards for 10 months.

[3] Data not available.

[4] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

[5] The June awards include only those with the new benefit rates.

## Table M-17.—OASDI cash benefits: Number of monthly benefits awarded to disabled workers and their spouses and children, 1957–81

| Period | Total | Disabled workers [1] | Wives and husbands [2] | Children [3] |
|---|---|---|---|---|

| November | 70,729 | 29,694 | 8,782 | 32,253 |
| December | 73,243 | 31,638 | 8,701 | 32,904 |
| 1981 | | | | |
| January | 69,962 | 29,708 | 8,413 | 31,841 |
| February | 70,945 | 30,535 | 8,563 | 31,847 |
| March | 81,298 | 34,384 | 10,046 | 36,868 |
| April | 64,491 | 28,361 | 7,803 | 28,327 |
| May [4] | 89,839 | 39,248 | 11,351 | 39,240 |
| June [5] | 33,977 | 15,581 | 3,660 | 14,736 |
| July | 65,667 | 29,175 | 8,208 | 28,284 |
| August | 61,021 | 27,254 | 7,711 | 26,056 |
| September | 64,624 | 28,882 | 7,778 | 27,964 |
| October | 66,425 | 29,173 | 7,960 | 29,292 |

[1] July 1957–October 1960, disabled workers aged 50–64; beginning November 1960, disabled workers under age 65.

[2] Mainly wives under age 65 with entitled children in their care.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18-21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

[5] The June awards include only those with the new benefit rates.

**Table M-18.**—Supplemental security income for the aged, blind, and disabled: Number of persons receiving federally administered payments and total amount, by reason for eligibility, October 1981

| Reason for eligibility | All persons | Amount of payments (in thousands) | | |
|---|---|---|---|---|
| | | Total | Federal SSI | State supplementation [1] |
| Total | 4,030,123 | $743,702 | $579,069 | $164,633 |
| Aged | 1,692,324 | 236,666 | 171,029 | 65,637 |
| Blind | [2] 78,426 | 17,986 | 13,027 | 4,959 |
| Disabled | [3] 2,259,373 | 489,050 | 395,013 | 94,037 |

[1] Excludes payments for State supplementation under State-administered programs.

[2] Includes approximately 25,000 persons aged 65 and over.

[3] Includes approximately 401,000 persons aged 65 and over.

**Table M-20.**—Supplemental security income for the aged, blind, and disabled: Number of persons initially awarded federally administered payments, by reason for eligibility, 1974–81

| Period | Total | Aged | Blind | Disabled |
|---|---|---|---|---|
| 1974 [1] | 890,768 | 498,555 | 5,206 | 387,007 |

[1] Data reported to the Social Security Administration by individual States. All data subject to revision. Excludes data for optional programs in North Dakota.

[2] Includes data for some States not distributed by reason for eligibility.

[3] Represents March 1980 data for Alaska, May 1981 data for Minnesota, and July 1981 data for Oklahoma; data not available for August 1981.

[4] Less than $500.

[5] Not computed on base of less than $500.

[6] Data not available.

[7] Includes data for the blind.

**Table M-27.**—Supplemental security income for the aged, blind, and disabled: Number of persons receiving State-administered State supplementation only and total and average amount, by reason for eligibility and State, August 1981 [1]

| State | Number of persons | | | | Total amount (in thousands) | | | | Average payment | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | Total | Aged | Blind | Disabled | Total | Aged | Blind | Disabled | Total | Aged | Blind | Disabled |

[1] Represents data for payments to recipients of the specified type of assistance under separate programs and under the combined State adult assistance programs. Superseded by supplemental security income program in the 50 States and the District of Columbia, beginning January 1974.

[2] Beginning September 1965, excludes State blind pension program in Pennsylvania administered under State law without Federal participation.

[3] Includes as recipients the children and 1 or both parents or 1 caretaker relative other than a parent in families in which the requirements of such adults were considered in determining the amount of assistance.

[4] Data incomplete.

[5] Represents average per family. Beginning January 1972, includes New York City.

## Table M-29.—Public assistance: Total money payments, by program and emergency assistance, 1945–80

[In thousands. Data subject to revision.]

| Period | Total [1] | Money payments | | | | | | Emergency assistance payments [4] |
|---|---|---|---|---|---|---|---|---|
| | | Total [2] | Old-age assistance [3] | Aid to the blind [3] | Aid to the permanently and totally disabled [3] | Aid to families with dependent children | General assistance | |

---

[1] Includes money payments for institutional services in intermediate-care facilities for 1968–71.

[2] Includes money payments for medical assistance for the aged for 1960–69.

[3] Superseded by supplemental security income program in the 50 States and the District of Columbia beginning 1974. Data for 1974 and thereafter are for only Guam, Puerto Rico, and the Virgin Islands.

[4] Money payments to families and medical vendor payments to needy families with children, authorized under title IV of the Social Security Act.

## **Table M-30.**—Public assistance: Total medical vendor payments, by program, 1951-78

[Data subject to revision]

| Period | Total amount of payments (in thousands) | | | | |
|---|---|---|---|---|---|
| | Total | Federally aided programs [1] | | | General assistance [3] |
| | | Medical assistance [2] | Medical assistance for the aged | Other | |
| 1951 | $103,179 | ... | ... | $56,782 | $46,397 |

---

[1] Federal participation in medical vendor payments, beginning October 1950, was authorized by the social security amendments.

[2] Beginning Jan. 1970, medical assistance for the aged and medical vendor payments under the categorical programs were replaced by the medical assistance program. Beginning Jan. 1972, includes payments to intermediate-care facilities formerly listed separately in table M-29.

[3] Data incomplete.

---

[1] Data not reported by some States because (1) programs are administered by townships and local areas and reports are not available, or (2) counties are unable to report on their State-assisted programs, or (3) program has been suspended. New Jersey data includes assistance under the "Insufficient Employment of Parents" program; Maryland data includes a State program of assistance to families with dependent children. In other States the program covers "home relief," "general welfare," "relief," etc.—State and local programs not federally aided.

[2] Data estimated.

[3] Not computed on base of fewer than 100 recipients.

## Table M-36.—Black lung benefits: Number of beneficiaries, average monthly family amount, and total monthly family amount in current-payment status, 1970–81 [1]

| At end of selected month | Number of beneficiaries | | | | Average monthly family amount | | | Total monthly family amount (in thousands) | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | Total | Miners | Widows | Spouses and children | Total | Miners [2] | Widows and other survivors [3] | Total | Miners [2] | Widows and other survivors [3] |

[1] Benefits payable under the "black lung" program established by the Federal Coal Mine Health and Safety Act of 1969. The program is administered by the Social Security Administration but is financed from the general funds of the Treasury.

[2] Includes benefits for dependent wife and/or child.

[3] Includes benefits for dependent child of widow, surviving child, parent, brother, and sister.

## Table M-37.—Unemployment insurance: Selected data on State programs, 1940–81

[Excludes programs for Federal employees and for ex-servicemen; includes unemployment compensation for State and local government employees where covered by State law]

| Period | Average weekly insured employment [1] | | Initial claims (weekly average) [4] | All types of compensated unemployment | | | | Average weekly benefit for total unemployment [6] | Number of claimants exhausting benefits | Funds available for benefits end of period [7] (in thousands) |
|---|---|---|---|---|---|---|---|---|---|---|
| | Number of workers [2] | Percent covered employment [3] | | Number of first payments | Weeks compensated | Benefits paid [5] (in thousands) | Average weekly number of beneficiaries | | | |
| 1940 | 1,282,385 | 5.6 | 214,231 | 5,220,073 | 51,084,375 | $518,700 | 982,392 | $10.56 | 2,596,129 | $1,817,108 |

---

[1] Beginning July 1963, includes Puerto Rican sugarcane workers' program.

[2] Workers reporting completion of at least 1 week of unemployment.

[3] Annual rates based on average covered employment in specified year; monthly rates on average for most recent 12-month period.

[4] Notices filed by workers to indicate they are starting periods of unemployment. Excludes transitional claims.

[5] Annual data, but not monthly, adjusted to exclude voided benefit checks and transfers under interstate combined-wage plan. Through 1970, includes payments under State (but not Federal) temporary extended unemployment insurance provisions; beginning 1971, excludes such payments.

[6] Includes dependents' allowances in States that provide such benefits.

[7] Sum of balances in State clearing accounts, benefit-payment accounts, and State accounts in Federal unemployment trust fund.

[8] Data not available.

Source: Department of Labor, Office of Administration and Management, based on data submitted by State agencies.

## Table M-38.—Unemployment insurance: Selected data by State, March 1981

[Excludes program for Federal employees and for ex-servicemen; includes unemployment compensation for State and local government employees where covered by State law]

| State | Average weekly insured unemployment | | Initial claims (weekly average) [3] | All types of compensated unemployment | | | | Average weekly benefit for total unemployment [5] | Number of claimants exhausting benefits |
|---|---|---|---|---|---|---|---|---|---|
| | Number of workers [1] | Percent covered employment [2] | | Number of first payments | Weeks compensated | Benefits paid [4] | Average weekly number of beneficiaries | | |
| Total | 3,381,589 | 3.9 | 380,671 | $715,461 | 13,503,852 | $1,393,611,692 | 3,069,057 | $105.66 | 290,104 |
| Alabama | 51,012 | 4.0 | 7,787 | 12,968 | 189,532 | 14,241,359 | 43,075 | 76.61 | 4,591 |
| Alaska | 12,625 | 8.6 | 1,334 | 2,820 | 62,400 | 7,162,384 | 14,182 | 116.98 | 1,649 |
| Arizona | 24,463 | 2.5 | 3,213 | 5,117 | 75,412 | 6,370,702 | 17,139 | 85.37 | 1,608 |
| Arkansas | 34,410 | 4.8 | 4,195 | 6,217 | 141,236 | 12,406,993 | 32,099 | 91.84 | 3,388 |

---

[1] Workers reporting completing at least 1 week of unemployment.

[2] Based on average covered employment for most recent 12-month period.

[3] Notices filed by workers to indicate they are starting periods of unemployment. Excludes transitional claims.

[4] Voided benefit checks and transfers under interstate combined-wage plan not deducted. Excludes payments under temporary unemployment insurance provisions.

[5] Includes dependents in States that provide such benefits.

[6] Includes data under the Puerto Rican sugarcane workers' program for average insured unemployment and initial claims (sugarcane data not available for other items).

---

[1] Monthly data represents amount at annual rate.

[2] Includes payments in kind; includes pay of Federal civilian and military personnel in all areas.

[3] Includes government transfer payments to beneficiaries under OASDHI, railroad retirement, public employee retirement, unemployment insurance, MDTA training allowances, trade adjustment assistance, "black lung," and veterans' pensions and compensation programs; cash and medical payments under workers' compensation and temporary disability insurance; and court-awarded benefits for work injuries sustained by railroad, maritime, and other workers under Federal employer liability acts.

[4] Includes government transfer payments to recipients of direct relief under programs of old-age assistance, aid to families with dependent children, aid to the blind, aid to the permanently and totally disabled, and general assistance. Excludes payments made in behalf of recipient to suppliers of medical care (vendor payments). Beginning 1961, includes bonus value of food stamps. Beginning 1974, includes supplemental security income payments.

[5] Includes proprietors' income, dividends, personal interest, and rental income; other transfer payments not enumerated in footnotes 2 and 3 (such as Government life insurance payments. World War bonus payments, mustering-out pay and terminal-leave benefits to discharged servicemen, subsistence allowances to veterans at school); and employer contribution to private pensions and welfare funds and other labor income (except compensation for injuries).

[6] Includes life insurance premium payments for veterans.

[7] Data revised March 1981.

Source: Department of Commerce, Bureau of Economic Analysis. Data regrouped to highlight items of special interest to the social security program.

## Table M-40.—Civilian population and labor force, 1940–81

[1] Includes Alaska and Hawaii for all years. Annual data are estimated as of July 1. Data not adjusted for errors of coverage and of age misreporting.

[2] Annual data are averages of monthly figures. Beginning 1960, includes Alaska and Hawaii. Data for 1950 and 1955 adjusted to reflect definitions adopted January 1957; two groups (those on temporary layoff and those waiting to start new wage and salary jobs within 30 days) formerly classified as employed—with a job, not at work—were assigned to other classifications, chiefly to the unemployed. Beginning 1962, comparability with previous years affected somewhat by the introduction of material from the 1960 Census (level of labor force and employment lowered by about 150,000). Before January 1967, series show aged 14 and over.

Source: Population data from Bureau of the Census, Department of Commerce. Labor-force data from Bureau of Labor Statistics, Department of Labor.

---

[1] Beginning January 1978, the Bureau of Labor Statistics introduced a new index for all urban consumers and a revised index for urban wage earners and clerical workers, both of which form a continuous series with the unrevised consumer price index, as of December 1977. For changes in titles of components and in definitions, see Bureau of Labor Statistics, **CPI Detailed Report, January 1978**, pp. 7-8.

## SSA Items in President's 1983 Budget

The President's Budget for Fiscal Year 1983, which was released to Congress on February 8, projects spending by the Federal Government at $757.6 billion—more than a fourth of it earmarked for the Social Security Administration (SSA). The document contains a number of proposals related to the Supplemental Security Income (SSI) and the Aid to Families with Dependent Children (AFDC) programs.

The following recommendations concern changes under the SSI program:

—Prorate the first month's SSI payment for new aged recipients from the date of application or the date of eligibility.

—Round the SSI payment standard and actual payment amount to the next lower dollar.

—Change the definition of permanent disability to require a 24-month, rather than a 12-month, prognosis.

—Ensure that the definition of disability is based on a preponderance of medical rather than other factors.

—Stop disregarding the first $20 of income in setting benefit levels for new recipients coming on the rolls after January 1, 1983.

—Permit the recovery of SSI overpayments from available Social Security benefits.

Also included in the 1983 Budget are the following proposals concerning the AFDC program:

—Eliminate the optional AFDC Emergency Assistance program and broaden the Low Income Energy Assistance program to include emergency payments.

—Prorate shelter and utilities expenses for AFDC families with large households.

—Mandate a job search for all AFDC applicants.

—Require all States to have community work experience programs.

—Require that the States count Federal and State energy assistance payments as income for AFDC purposes.

—Include the income of all unrelated adults as part of the income of the AFDC assistance unit for the purpose of computing payments.

—Give the States full fiscal responsibility for erroneous AFDC payments on a phased-in basis.

The President's 1983 Budget sets expenditures under the Old-Age, Survivors, and Disability Insurance (OASDI) program at $173.5 billion, up from $154.6 billion a year earlier. The rise reflects the impact of an expanding number of beneficiaries, higher benefit levels due to cost-of-living increases (8.1 percent estimated for June 1982 and 6.5 percent estimated for June 1983), and higher average wages on which benefits are based. Estimated outlays for other SSA programs during Fiscal Year 1983 are $8.9 billion for SSI, $1.1 billion for disabled coal miners, $5.5 billion for assistance payments, $400,000 for Child Support Enforcement, $1.3 billion for Low Income Energy Assistance, and $1.7 billion for Combined Welfare Administration.

The President proposes that direct Social Security coverage be provided for all current and future railroad workers. The basic benefits currently paid to the group under the Railroad Retirement program (in conjunction with a financial interchange with Social Security) would become regular Social Security benefits, and the supplemental pension benefit system based on railroad service would be converted to a private industrial pension plan. The Budget does not contain any major proposals for current or long-term OASDI financing because the Administration is awaiting recommendations, due by the end of 1982, from the National Commission on Social Security Reform.

## SSA Executive Changes

The post of Deputy Commissioner of Social Security for Programs, held until his recent resignation by Robert J. Myers, has been merged with the post of Deputy Commissioner for External Affairs. The incumbent in the latter position, Paul B. Simmons, will now serve under the title of Deputy Commissioner for Programs and Policy. Mr. Myers has been appointed executive director of the National Commission on Social Security Reform, a bipartisan body formed by President Reagan to suggest ways in which the financing of the Social Security program can be improved.

The new Chief Actuary of the Social Security Administration is Harry C. Ballantyne, who has served as

Deputy Chief Actuary, Short-Range Program Estimates, since 1979. He has been with the Office of the Actuary for more than 20 years.

## Program Operations

### OASDI Benefits

In November 1981, monthly cash benefits were awarded to 340,309 persons under the Old-Age, Survivors, and Disability Insurance (OASDI) program—40 percent of these awards were to retired workers and 8 percent to disabled workers. Eighty-eight percent of all awards and 84 percent of awards to retired workers were immediately payable. The average monthly benefit amounts for currently payable awards were $354.80 for retired workers and $420.11 for disabled workers.

At the end of November 1981, the OASDI program had 35,967,914 beneficiaries and paid cash benefits totaling $12.2 billion—an increase of 369,000 in the number of beneficiaries and $1.6 billion in monthly benefits since November 1980. The OASI program accounted for 94 percent of the rise in the amount of monthly benefits and 100 percent of the increase in the number of beneficiaries. Retired workers numbered 20,119,289, or 56 percent of all OASDI beneficiaries.

During the 12-month period ended November 1981, the monthly amount of OASI benefits rose 16 percent, and the number of beneficiaries increased 2 percent. The amount of DI benefits rose 8 percent, while the number of beneficiaries decreased 4 percent.

Average monthly benefit amounts payable in November 1981 to retired and disabled workers were $385.51 and $413.27, respectively. A year earlier, average benefits were $340.83 for retired workers and $370.60 for disabled workers.

### SSI Payments

**Federally administered payments.** In November 1981, 4,027,100 persons received federally administered Supplemental Security Income (SSI) payments, a decline of 3,100 from the October total. The number of aged recipients dropped by 5,800, while disabled and blind recipients rose by 2,600 and 200, respectively. Among individual States, 43 reported a decrease in their total SSI caseload. The number of aged cases was down in 48 States, disabled in 36, and blind in 12.

Federally administered payments totaled $738.2 million in November—down $5.5 million from October. This decline was centered in Massachusetts and New Jersey because of retroactive State supplementation payments that had been made the previous month. The only significant increase in payments ($1.4 million) occurred in Wisconsin, where optional State supplementation payments were raised by the amount of the July 1981 Federal SSI increase, effective in November.

**State-administered supplementary payments.** During September 1981, the number of persons receiving State-administered supplementation declined slightly for the second consecutive month. All three eligibility categories contributed to the decline. The total expenditures for State supplements remained about the same as for the previous month—$19.3 million.

| OASDI | November 1981 | October 1981 | November 1980 |
|---|---|---|---|
| **Monthly beneficiaries, total** (in thousands) | 35,968 | 35,904 | 35,598 |
| Aged 65 and over, total | 24,350 | 24,282 | 23,772 |
| Retired workers | 18,006 | 17,945 | 17,503 |
| Survivors and dependents | 6,267 | 6,258 | 6,175 |
| Special age-72 beneficiaries | 77 | 79 | 94 |

# Restoration of Certain Minimum Benefits and Other OASDI Program Changes: Legislative History and Summary of Provisions

by John A. Svahn*

The Omnibus Budget Reconciliation Act of 1981 (Public Law 97-35), enacted on August 13, 1981, contained a provision to eliminate the minimum-benefit provision under the Social Security program for both current and future beneficiaries. Although a large majority of the members of both Houses of Congress accepted the measure in the broad context of the Reconciliation Act, there was considerable reaction against it and the provision was reconsidered. On December 29, 1981, new legislation restored the minimum benefit for current, but not future, beneficiaries. To lessen the cash-flow problems of the Old-Age and Survivors Insurance (OASI) program, Public Law 97-123 also authorizes borrowing among the several trust funds and calls for the coverage, for Social Security tax and benefit purposes, of sick pay during the first 6 months of nonwork. In this article, the Commissioner of Social Security traces the legislative development of these and other provisions contained in the new law. He points out that, although the added expenditures for minimum benefits ultimately will be offset by the coverage of sick pay, the net short-term effect of the two provisions will be higher program costs. The interfund borrowing provision, however, could permit the payment of benefits on a timely basis throughout 1982 and the first 6 months of 1983.

Under the Omnibus Budget Reconciliation Act of 1981 (Public Law 97-35), enacted on August 13, 1981, persons initially becoming eligible for Social Security after October 1981 were to be entitled only to a wage-related benefit, not the regular minimum benefit, if higher. For all other beneficiaries, the minimum benefit was similarly eliminated for months after February 1982. Persons aged 60-64 whose benefits were reduced under this provision and who would have been eligible for Supplemental Security Income (SSI) payments had they been aged 65 or older were to be eligible for a special SSI payment in an amount not to exceed the difference between their newly reduced Social Security benefit and the amount that they had been receiving under prior law.[1]

On December 29, 1981, President Reagan signed into law H.R. 4331, a bill "to amend the Omnibus Budget Reconciliation Act of 1981 to restore minimum benefits under the Social Security Act" (Public Law 97-123). The new legislation restores such benefits to those who became eligible for them before January 1982 and makes changes that will lessen the cash-flow problems of the Old-Age and Survivors Insurance Trust Fund in 1982. The major provisions of Public Law 97-123 are:

(1) **Minimum benefit.** The minimum benefit is restored for persons who became eligible in 1981 or earlier. The minimum benefit is eliminated only for new beneficiaries—those who reach age 62 or become disabled after 1981 and the survivors of those who die after that year. However, under a special exception, the minimum benefit is retained for individuals eligible after 1981 and before 1992 who are members of a religious order under a vow of poverty which

---

*Commissioner of Social Security.

[1] For details on the provisions of Public Law 97-35, see John A. Svahn, "Omnibus Reconciliation Act of 1981: Legislative History and Summary of the OASDI and Medicare Provisions," **Social Security Bulletin**, October 1981, pages 3-24.

had elected to be covered under Social Security before December 29, 1981 (the date of enactment).

(2) **Interfund borrowing.** The Old-Age and Survivors Insurance (OASI), Disability Insurance (DI), and Hospital Insurance (HI) Trust Funds are authorized to borrow from one another through December 31, 1982 (with provision for repayment with interest).

(3) **Sick pay.** Coverage as wages for Social Security tax and benefit purposes is provided for all sick pay through the first 6 calendar months of nonwork. Included are payments by insurance companies and payments under State temporary disability insurance laws (and under the railroad temporary disability insurance program). Any portion of such sickness benefits paid for by employee contributions will not be covered.

## Background and Legislative History

Throughout the first half of 1981, while the Omnibus Budget Reconciliation Act of 1981 (Public Law 97-35) was under consideration, there was substantial discussion about the proposal to eliminate the Social Security minimum benefit, which was included in that legislation. For example, Chairman Pickle of the Subcommittee on Social Security of the House Ways and Means Committee introduced a bill (H.R. 3207) which would have retained the minimum benefit for those on the rolls, but not for future eligibles. In June, the Senate defeated, by a vote of 53 to 45, a proposal by Senator Riegle that would have retained the minimum benefit for those on the rolls. As briefly discussed in the October issue of the **Social Security Bulletin**,[2] the House of Representatives passed on July 31—the same day that it gave final approval to the Omnibus Budget Reconciliation Act of 1981—a bill (H.R. 4331) to fully restore the minimum Social Security benefit, not only for those on the rolls, but also for all future eligibles.

Also, as the time remaining for additional substantial legislation in 1981 grew shorter, there was increasing interest in action to deal with the fact that the financing projections for Social Security continued to show that the OASI Trust Fund would be unable to meet its benefit obligations in a timely manner in late 1982. In September, the Senate Finance Committee held hearings to review the financial status of the program and alternative proposals for dealing with the long-range problems. In a nationwide address on September 24, President Reagan discussed the financial condition of the Social Security program and took note of the concern that the provision for the elimination of the minimum benefit (which provision had been enacted in the Omnibus Budget Reconciliation Act) may have affected some people who were, in fact, in financial need. He stated: "I am therefore asking . . . for restoration of the minimum payment and for interfund borrowing as a temporary measure to give us some time to seek a permanent solution." The President also announced the establishment of a 15-member bipartisan commission—with five members nominated by the House of Representatives, five by the Senate, and five appointed by him—to review the status of the OASDI program and make recommendations to assure the financial integrity of the system. (This National Commission on Social Security Reform, which was appointed on December 16, 1981, after final congressional consideration of H.R. 4331, is due to submit its final report by December 31, 1982.[3])

### Action in the House of Representatives

As noted earlier, on July 31, 1981, the House passed (404 to 20) H.R. 4331, a bill to restore the minimum Social Security benefit as in effect before enactment of the Omnibus Budget Reconciliation Act of 1981 (Public Law 97-35) for all current and future beneficiaries. The House did not again consider major Social Security legislation until after Senate consideration of H.R. 4331.

### Action in the Senate

The House-passed bill was sent to the Senate on July 31, where it was "held at the desk" so that it could be called up for consideration at any time, rather than being referred to the Senate Finance Committee.

**Senate Finance Committee action.** On July 7, Secretary of Health and Human Services Richard S. Schweiker testified before the Subcommittee on Social Security and Income Maintenance Programs of the Senate Finance Committee on the financial status of the OASDI program and on the Administration's long-range proposals. The Finance Committee held further public hearings on July 9 and 10. Subsequently, on September 23 and 24, the Committee met to discuss further the overall financial status of the program and alternative proposals which, with new legislation relating to the restoration of the minimum benefit, might at least maintain the near-term financial situation. In other words, it was believed that any increased cost arising from the restoration of the minimum-benefit provision should be met by other changes (either decreasing benefit outgo or increasing tax income, or both).

[3] The names of Commission members appear on page 1 of the January 1982 issue of the **Social Security Bulletin**.

On September 24, the Senate Finance Committee approved (19 to 0) a Social Security package that proposed:

(1) Restoring the minimum benefit for persons eligible before November 1981, except for those who were receiving Federal, State, or local government-employee pensions in excess of $300 a month and those residing outside the United States. Persons receiving government-employee pensions of more than $300 a month would have been entitled to a Social Security benefit based on their actual covered earnings or, if larger, the minimum benefit reduced by the amount by which their government-employee pension exceeded $300. Also, entitlement to the minimum benefit would have been retained for individuals eligible after October 1981 and before November 1991 if they were covered under the 1972 provision which permits coverage of members of religious orders under a vow of poverty, at the election of the order.

(2) Reallocating Social Security taxes among the OASI, DI, and HI Trust Funds to address the short-range financing problems of the 1980's.

(3) Providing authority for interfund borrowing between the OASI and DI Trust Funds as a fallback measure. (The HI Trust Fund, however, would not have been permitted to borrow from or lend to the OASI and DI Trust Funds.) Such authorization would have been effective only through December 31, 1990.

(4) Extending Social Security coverage and taxes to sick pay through the first 6 calendar months of sick pay in certain cases (generally, when paid directly by the employer under a plan and from the regular wage and salary account of the employer).

(5) Extending the disability maximum family benefit—150 percent of the Primary Insurance Amount (PIA), but not more than 85 percent of average indexed monthly earnings (and not less than 100 percent of PIA)—to retirement and survivor cases.

Proposals somewhat similar to the last four of these provisions had been included in the Administration's tentative long-range package as announced on May 12.[4]

**Senate floor action.** There was, in late September, some uncertainty as to the form that floor action might take. For example, some thought was given to possibly adding the Social Security proposals to other legislation, such as a bill to extend the debt ceiling, which was expected to be passed very quickly. It was decided, however, that the Social Security changes would be drafted in the form of a substitute for the House-passed provisions of H.R. 4331, the bill to restore the Social Security minimum benefit.

When the Senate took up H.R. 4331 on October 14, Senator Dole, Chairman of the Senate Finance Committee, offered the Committee's amendment as a complete substitute for the House bill. The Senate accepted the Committee amendment by voice vote. In the course of the Senate floor debate, a number of additional proposals and a substitute sick pay provision were agreed to. As passed by the Senate (95 to 0) on October 15, H.R. 4331 contained the following provisions in addition to those agreed to by the Senate Finance Committee:

(1) Extend Social Security coverage of sick pay. Under a floor amendment, all sick pay paid through the first 6 calendar months would have been covered, except payments under a State temporary disability insurance law or workers' compensation plan, or certain payments made by insurance companies.

(2) Require the General Accounting Office to study the management efficiency, employee productivity, and technical capacities of the Social Security Administration.

(3) Require a new separate annual statement of requests for new budget authority, estimates of outlays and revenues, and estimates of deficits or surpluses for the Social Security trust funds.

(4) Require agencies of the U.S. Government or of any State or locality to release information necessary to carry out the provision relating to the prohibition of payments to prisoners.

(5) Require a report within 90 days on the optimum system to improve the current "report of death" procedures.

(6) Increase the maximum penalties for the misuse of Social Security numbers and other Social Security related offenses.

(7) Resolve that it is the sense of the Congress that future legislative changes will not reduce the OASDI benefits to which individuals are entitled in the month of enactment.

(8) Require that Social Security cards be issued on banknote-quality paper.

(9) Require the establishment of at least seven demonstration projects involving the use of AFDC recipients as home health aides.

(10) Provide increased revenues for the Highway Trust Fund (an unrelated Department of Transportation matter).

---

[4] See John A. Svahn, op cit., page 6.

## Subsequent Action in the House of Representatives

When H.R. 4331 was passed by the Senate and sent back to the House of Representatives, the House did not immediately act on the bill and appoint conferees. Instead, the House leadership and the Committee on Ways and Means deliberated on whether there might be support for adopting more far-reaching financing and benefit changes as part of H.R. 4331. On November 4, the Ways and Means Committee voted on several alternative approaches, as follows:

(1) A proposal by Chairman Pickle of the Subcommittee on Social Security and Representative Conable which would have (a) adjusted the dollar bend points in the PIA benefit formula each year in 1983–85 by 50 percent (rather than 100 percent) of wage increases,[5] (b) increased the age of eligibility for full benefits from 65 to 67 over the period 1990–2000, and (c) based cost-of-living increases on the lesser of wage or price increases, beginning in 1983. This proposal was defeated 18 to 14.

(2) A proposal by Representative Gradison to separate the operations of the Social Security trust funds from the unified budget. This proposal was defeated 18 to 15.

Thus, the decision was to go to conference with the Senate, on the basis of the complete restoration of the minimum benefit, as in H.R. 4331 as passed by the House of Representatives in July.

Later on November 4, the House formally appointed conferees on H.R. 4331. They were instructed, under a motion by Representative Conable (ranking minority member on the Ways and Means Committee), to assure that persons currently receiving Social Security would not have their benefits reduced and to reject provisions relating to changes in Social Security tax allocations.

## Action in House-Senate Conference

The Conference Committee on H.R. 4331 met on November 4 and 16 and again on December 14, when it reached agreement. Although the staffs of the House Ways and Means and the Senate Finance Committees were active throughout November in seeking to work out compromises, the conferees were close to deadlock over the extent to which the legislation should include measures to offset the cost of restoring the minimum benefit.

Some House conferees took the position that (a) the repeal of the minimum benefit under Public Law 97-35 had simply been a mistake, (b) no "savings" should have been attributed to that change initially, and (c) therefore, no additional financing or offsetting reductions in future benefits should be required to restore the minimum. (Restoration of the minimum benefit for current beneficiaries was expected to cost from $6 billion to $7 billion over the period 1982–86.) Some House conferees thought that if the House accepted the Senate proposal for sick-pay coverage (involving additional income of, at most, $4.4 billion over the 5-year period) and yielded to the Senate with respect to elimination of the minimum benefit for future beneficiaries, it should not also accept the Senate provision that would have limited the amount of the maximum family benefit for families of workers who reached age 62 or who died before reaching age 62 in 1982 or later. Also, some House conferees thought that it would be undesirable to include in this bill financing or other measures that might reduce pressures for more lasting financing solutions in 1982.

On the other hand, the Senate conferees believed that they could not accept a bill partially restoring the minimum benefit unless it would leave the OASI and DI Trust Funds in at least as strong a position as they would have been in if the provision eliminating the minimum benefit for those currently on the rolls and for future new eligibles were to have remained in effect. Because the additional revenues from the extension of coverage to certain sick pay would not be sufficient over the short range to cover the cost of restoration of the minimum benefit for those on the rolls, they believed that some further limitation on family benefits for future cases over that in existing law should be included in the bill.

As time for action on the minimum benefit grew short and as it was increasingly clear that, regardless of what actions were taken with respect to the maximum family benefit, the Congress would need to consider basic Social Security financing and benefit proposals soon again, the minimum-benefit issue took precedence over the issue of the net short-range fiscal impact of the changes in H.R. 4331. The Senate conferees agreed to drop the proposed prospective lower maximum family benefits for families of retired and deceased workers.

Another area of difficulty concerned the Senate-passed provisions for reallocation of OASDI-HI tax rates. Shortly after the revised tax schedules had been adopted by the Senate Finance Committee (in the form later passed by the Senate), significant revisions in the cost estimates for the Hospital Insurance program were released. On the basis of these new estimates, the proposed revisions in the tax schedules would no longer be appropriate. Therefore, to overcome difficulties associated with precise shifts in the tax-rate schedules, the

---

[5] This approach was similar to a May 1981 Administration proposal, except that the latter reduction would have been effective in 1982–87. See John A. Svahn, **op cit.**, page 6.

Conference Committee agreed to drop the Senate provision relating to these schedules, and to include the Hospital Insurance Trust Fund in the provision for interfund borrowing authority. Although in a technical sense this agreement went somewhat beyond the scope of the conference, it was clearly in line with the intent of the Senate bill and the instruction to the House conferees. Thus, it was acceptable to the conferees. During the conference, and later when this provision was considered on the floor of both Houses, there was discussion of the likelihood that the December 31, 1982, termination date for the borrowing authority might lead to further financing legislation late in the second session of the 97th Congress—possibly by a lame-duck, post-election session.

Once agreement was reached on the major benefit and financing aspects of the bill, and in the press of business of the concluding few days of the first session of the 97th Congress, the conferees moved quickly to resolve remaining differences, dropping a number of the items that had been adopted on the Senate floor, but including others. The final bill, as agreed to by the conferees on December 14, was passed by the Senate on December 15 (96 to 0) and, on December 16, by the House of Representatives (412 to 10). Thus, in its final form, the bill contained the following provisions:

(1) **Minimum benefit.** Restoration of the minimum benefit for current beneficiaries. The minimum would be eliminated only for new beneficiaries—persons who reach age 62 or become disabled before reaching age 62 after 1981 and the survivors of those who die after that year (1991 in the case of certain persons under a vow of poverty—as in the Senate version of the bill).

  (a) Since no current beneficiaries would be affected, the provision to provide special SSI payments (under Public Law 97-35) was eliminated.

  (b) The Senate version of the bill would not have fully restored the minimum benefit for those receiving government-employee pensions in excess of $300 a month or those residing outside the United States. These provisions were dropped in the conference agreement.

(2) **Interfund borrowing.** Authority for the OASI, DI, and HI Trust Funds to borrow from one another through December 31, 1982 (with provision for repayment with interest).

(3) **Sick pay.** Coverage of all sick pay (other than workers' compensation and sickness benefits attributable to employee contributions) paid through the first 6 calendar months of nonwork as wages for Social Security tax and benefit purposes.

(4) **Penalties for misuse of Social Security numbers and other Social Security related offenses.** An increase in the maximum penalties for misuse of Social Security numbers and other Social Security related offenses.

(5) **Demonstration projects under section 1115.** A requirement that there be at least seven demonstration projects involving the hiring of AFDC recipients to serve as home health aides, as authorized under the Omnibus Reconciliation Act of 1980.

(6) **Information to implement prisoner legislation.** Authorization for Federal and State agencies to furnish information needed to implement the 1980 legislation limiting benefit payments to certain prisoners.

(7) **Reports of death.** A requirement that the Secretary of Health and Human Services submit a report within 90 days of enactment on ways to improve current "report of death" procedures.

The Conference Committee agreed to drop a number of provisions that had been included in H.R. 4331 as passed by the Senate. The omitted provisions relate to a reduction in the maximum family benefit in OASI cases (to the maximum applicable for DI cases), revised tax-rate allocations among the trust funds, issuance of Social Security cards on banknote-quality paper, a General Accounting Office study of the administrative capacity of the Social Security Administration, modification of budget accounting procedures for the trust funds, a resolution relating to future preservation of benefit rights for persons on the rolls when amendments to the Social Security Act are enacted, and extension of excise taxes for the Highway Trust Fund.

## Summary of Provisions

### Restoration of Minimum Benefits

The new law restores the Social Security minimum benefit for individuals who first became eligible for benefits (that is, attained age 62 or became disabled) before January 1982 or whose benefits are based on a worker's eligibility or death before January 1982. (With the restoration of the minimum benefit for current beneficiaries, the special SSI payments for persons under age 65 provided under Public Law 97-35, the Omnibus Budget Reconciliation Act of 1981, were eliminated.) Other persons will have their benefits computed on the basis of actual covered earnings with no minimum-benefit provision (the method provided under Public

Law 97-35). With respect to members of a religious order under a vow of poverty which had elected to be covered under Social Security before December 29, 1981 (the date of enactment), the elimination of the minimum benefit for future beneficiaries applies only to those who will become eligible after 1991.

## Interfund Borrowing

Public Law 97-123 authorizes borrowing among the Old-Age and Survivors Insurance Trust Fund, the Disability Insurance Trust Fund, and the Hospital Insurance Trust Fund until January 1983, whenever the Managing Trustee[6] determines that such borrowing is appropriate to finance the benefit payments from the borrowing trust fund. The Conference Report states in this respect that "In no case shall such interfund borrowing make adjustments in the trust funds insuring benefit payments for a period more than 6 months beyond the date of such determination."[7]

Whenever borrowing occurs, the borrowing trust fund must pay the lending trust fund interest at a rate equal to that which the lending trust fund would have earned if the monies loaned had been invested. Repayment of principal is to be made whenever the Managing Trustee determines that the assets of the borrowing trust fund are sufficient to permit repayment of all or part of any loans outstanding.

## Coverage of Sick Pay

Public Law 97-123 removes the exclusion from the definition of wages for tax and coverage purposes of certain sick pay under a plan or system through the first 6 calendar months that the employee is off work. It includes in the definition of wages those payments made under a sick pay plan to an employee or dependent by a third party and payments under a State temporary disability insurance law. In cases where a third party makes the sick payments, the third party is liable for paying the Social Security taxes and for reporting the payments for Social Security wage-record purposes; however, the law provides that third parties may be relieved of liability for Social Security employer taxes on sick payments under regulations to be prescribed by the Secretary of the Treasury. Under the prescribed regulations, liability for the Social Security employer taxes would shift from the third party to the employer once the third party withheld and deposited the employee portion of the Social Security taxes and notified the employer of the amount of sick pay paid. The bill also amends the Railroad Retirement Tax Act to achieve a comparable result with respect to the taxation of sick pay under that Act.

Payments under a workers' compensation law and sick pay paid more than 6 calendar months after the employee last worked will continue to be excluded from the definition of wages, as under present law. Payments attributed to an employee's contributions to the plan will also be excluded.

The removal of the coverage exclusion is generally effective with respect to remuneration paid after 1981. The conferees recognized that the January 1, 1982, effective date could pose some difficulties for employers and agreed therefore to provide that no penalties or interest will be assessed for failure to make timely payments of taxes on sick pay paid between January 1 and June 30, 1982, if the failure is not due to willful neglect. (Technically, the law specifies that such failure must be "due to reasonable cause and not to willful neglect" and the Conference Report fails to provide clarifying language. However, a colloquy on the Senate floor between Senators Dole and Heinz makes it clear that the reference to "reasonable cause" was included inadvertently, that the conferees did not intend any burden on the employer to show reasonable cause, and that the only determination to be made (by the enforcing agency) was intended to be one of "willful neglect."[8]) Further, sick pay will not be taxed or credited for Social Security purposes if it is paid by a third party pursuant to a contract between the employer and the third party entered into before December 14, 1981, if the third party's coverage for that employer's group ceases before March 1, 1982, and no payment is made to the employee under the contract after February 28, 1982.

## Penalties for Misuse of Social Security Cards

The new law adds to the list of actions that constitute misuse of Social Security cards by making it unlawful to buy, sell, alter, or counterfeit a Social Security card or to possess a valid or counterfeit card with intent to sell or alter it. It also changes the classification of the crimes enumerated in section 208 of the Social Security Act (including misuse of Social Security cards and numbers) from misdemeanor to felony, increases the maximum fine from $1,000 to $5,000, and increases the maximum prison term from 1 year to 5 years. The provision is effective with respect to violations committed after December 29, 1981.

## Demonstration Projects Using AFDC Recipients as Home Health Aides

This provision amends the Omnibus Reconciliation Act of 1980 (as previously amended by section 2156 of the Omnibus Budget Reconciliation Act of 1981) to require the Secretary to enter into agreements with at least seven States for demonstration projects relating to the training of AFDC recipients as home health aides by the deadline of January 1, 1982.

---

[6] By law, the Board of Trustees consists of the Secretaries of Health and Human Services, Treasury, and Labor, with the Secretary of the Treasury serving as the Managing Trustee.

[7] House Report No. 97-409, 97th Congress, page 10.

[8] **Congressional Record**, Dec. 15, 1981, page S. 15279.

### Prisoners

Federal, State, and local government agencies are required to make available to the Secretary of Health and Human Services the name and Social Security number of any felon imprisoned under the jurisdiction of the agency whenever the Secretary requests, in writing, the information to carry out the provisions of section 223(f) of the Social Security Act concerning the suspension of benefits to certain imprisoned felons, effective December 29, 1981.

### Report to Congress

The Secretary is required to report to the Congress by March 29, 1982 (90 days after enactment) on actions being taken to prevent the payment of Social Security checks with respect to deceased individuals, including the use of death records available under the Medicare program.

## Financial Implications of Public Law 97-123

Public Law 97-123 could have the effect of assuring, through the provision for interfund borrowing, that the OASI Trust Fund (as well as the DI and HI Trust Funds) will be able to meet all benefit obligations on a timely basis throughout 1982 and for as much as the first 6 months of 1983. However, the legislation will result in increased expenditures for minimum benefits that will more than exceed the increase in revenues due to the coverage of sick pay for a number of years into the future. Eventually, the additional revenues arising as a result of the legislation will exceed expenditures thereunder—by an average of about 0.02 percent of taxable payroll over the 75-year valuation period.

The short-range financial status of the Social Security program, in summary, is adversely affected on a **net** basis by the combined effect of the minimum benefit and sick-pay provisions. However, it is in a better position on an overall basis when the restricted interfund borrowing is also considered, because OASI benefit payments could continue for a longer period than under prior law. But the OASI Trust Fund is still expected to be unable to meet benefit payments beginning after mid-1983, and additional corrective legislation is a necessity in the near future.

### Short-Range Implications

The tables in this article summarize the estimated short-range financial effects of Public Law 97-123. Tables 1-3 show the estimated additional Old-Age, Survivors, and Disability Insurance (OASDI) benefit payments and additional Old-Age, Survivors, Disability, and Hospital Insurance (OASDHI) tax income (resulting from the minimum benefit and sick-pay provisions) under three alternative sets of assumptions—the Alternative II-B and "worst-case" assumptions of the 1981 Trustees Report and the assumptions underlying the President's 1983 Budget. The 1983 Budget assumptions are somewhat more optimistic than the Alternative II-B assumptions of the 1981 Trustees Report over the period considered but are less optimistic than the Alternative II-A assumptions. As indicated, the combined effect of these two provisions is an estimated net loss to the trust funds of about $2.0 billion to $2.6 billion over the period 1982-86, depending on future economic conditions.

The estimated operations of the OASI, DI, and HI Trust Funds under Public Law 97-123 on the basis of the three sets of assumptions, taking account of the maximum potential effects of interfund borrowing, are shown in tables 4-6.

With regard to the operation of the interfund borrowing provision, it should be noted that such things as the specific loans, repayments, timing of interest payments, and so forth are largely at the Managing Trustee's discretion. For purposes of illustration, the effect of a

**Table 1.**—Estimated short-range financial effect of Public Law 97-123 on the basis of the **Alternative II-B** assumptions of the 1981 Trustees Report, 1982-86

[In millions]

| OASDI-HI provision | Calendar year 1982 | 1983 | 1984 | 1985 | 1986 | Total, 1982-86 |
|---|---|---|---|---|---|---|
| Additional OASDI benefit payments resulting from restoration of minimum benefits for persons eligible for benefits before 1982 .... | $930 | $1,275 | $1,300 | $1,330 | $1,320 | $6,155 |
| Additional OASDI and HI tax income resulting from coverage of first 6 months of sick leave, self-insurance, private insurance, and mandated public insurance benefits not attributable to employee contributions [1].... | 641 | 703 | 765 | 874 | 956 | 3,939 |

[1] The removal of the coverage exclusion went into effect on Jan. 1, 1982. Estimates shown are based on the assumption that substantial tax avoidance would occur as a result of an accounting procedure involving the packaging of sick pay plans with other forms of protection toward the cost of which the employee may make a direct contribution. If no tax avoidance were to take place, the total tax income for this provision is estimated to be $4.3 billion in 1982-86, or about 10 percent greater than the estimate shown.

"maximum" borrowing approach is included in tables 4 through 6.

Lesser borrowing is also theoretically possible. Under a "minimum" borrowing approach, for example, the OASI Trust Fund would borrow just the amount needed at the beginning of any particular month in order to permit OASI benefits to be paid on time. After December 31, 1982, borrowing is no longer authorized and, under this "minimum" approach, benefits for January or February 1983 could not be paid on time.

**Table 2.**—Estimated short-range financial effect of Public Law 97-123 on the basis of the **"Worst-case"** assumptions of the 1981 Trustees Report, 1982-86

[In millions]

| OASDI-HI provision | Calendar year 1982 | 1983 | 1984 | 1985 | 1986 | Total, 1982-86 |
|---|---|---|---|---|---|---|
| Additional OASDI benefit payments resulting from restoration of minimum benefits for persons eligible for benefits before 1982 .... | $960 | $1,340 | $1,400 | $1,470 | $1,490 | $6,660 |
| Additional OASDI and HI tax income resulting from coverage of first 6 months of sick leave, self-insurance, private insurance, and mandated public insurance benefits not attributable to employee contributions [1] .... | 641 | 698 | 776 | 905 | 1,007 | 4,027 |

[1] The removal of the coverage exclusion went into effect on Jan. 1, 1982. Estimates shown are based on the assumption that substantial tax avoidance would occur as a result of an accounting procedure involving the packaging of sick pay plans with other forms of protection toward the cost of which the employee may make a direct contribution. If no tax avoidance were to take place, the total tax income for this provision is estimated to be $4.4 billion in 1982-86, or about 10 percent greater than the estimate shown.

**Table 3.**—Estimated short-range financial effect of Public Law 97-123 on the basis of the assumptions underlying the **President's 1983 Budget**, 1982-86

[In millions]

| OASDI-HI provision | Calendar year 1982 | 1983 | 1984 | 1985 | 1986 | Total, 1982-86 |
|---|---|---|---|---|---|---|
| Additional OASDI benefit payments resulting from restoration of minimum benefits for persons eligible for benefits before 1982 .... | $930 | $1,250 | $1,240 | $1,215 | $1,165 | $5,800 |
| Additional OASDI and HI tax income resulting from coverage of first 6 months of sick leave, self-insurance, private insurance, and mandated public insurance benefits not attributable to employee contributions [1] .... | 641 | 690 | 739 | 841 | 924 | 3,835 |

[1] The removal of the coverage exclusion went into effect on Jan. 1, 1982. Estimates shown are based on the assumption that substantial tax avoidance would occur as a result of an accounting procedure involving the packaging of sick pay plans with other forms of protection toward the cost of which the employee may make a direct contribution. If no tax avoidance were to take place, the total tax income for this provision is estimated to be $4.2 billion in 1982-86, or about 10 percent greater than the estimate shown.

Under the "maximum" approach, in December 1982 the Managing Trustee would make large transfers from the DI and HI Trust Funds to the OASI Trust Fund so that timely payment of OASI benefits could be made for the maximum period prescribed by the Conference Report, as described previously. For the "maximum" approach, then, it is assumed that on December 31, 1982, the OASI Trust Fund would borrow sufficient amounts from the other two trust funds to permit timely payment of benefits through June 3, 1983.

**Table 4.**—Estimated operations of the OASI, DI, and HI Trust Funds under Public Law 97-123 (assuming maximum interfund borrowing) on the basis of the **Alternative II-B** assumptions of the 1981 Trustees Report, 1980-90

[1] Between 0 and 0.5 percent.

[2] Between 0 and − 0.5 [illegible]ent.

Notes: (1) The income figures for 1982, and the end-of-year asset figures for 1982 and later, reflect the transfer of $4.5 billion from the DI Trust Fund to the OASI Trust Fund under the interfund borrowing authority provided by P. L. 97-123.

(2) The estimated operations for OASI, OASDI, and total OASDI and HI in 1983 and later are theoretical since, following the expiration of the present law interfund borrowing authority, the OASI Trust Fund would become depleted in the second half of 1983 when assets become insufficient to pay benefits when due.

## Long-Range Implications

Over the 75-year projection period, average OASDI expenditures as a percentage of taxable payroll are estimated to decrease by 0.02 percent. This change represents the combined effect of (1) higher expenditures due to the restoration of the minimum benefit for current beneficiaries and to additional benefits arising from coverage of sick pay and (2) an increase in taxable payroll from the coverage of sick pay. On balance, the additional tax income would more than offset the additional benefit payments in the long run. The interfund borrowing authority would have no net effect on the long-range status of the OASDI program.

**Table 5.**—Estimated operations of the OASI, DI, and HI Trust Funds under Public Law 97-123 (assuming maximum interfund borrowing) on the basis of the **"Worst-case"** assumptions of the 1981 Trustees Report, 1980-86

# Actual Costs of the Social Security System Over the Years Compared With 1935 Estimates

by Robert J. Myers[*]

It is believed by many that the cost of the Social Security program currently is considerably higher than it had been estimated that it would be when the program was enacted in 1935. The analysis in this article indicates that the cost of the Old-Age and Survivors Insurance program in 1980, when expressed as a percentage of taxable payroll, was almost exactly the same as it was estimated initially to be then. Such cost, however, does not include the Disability Insurance and Hospital Insurance programs and, moreover, is estimated to increase by about 50 percent over the next 50 years, whereas the initial estimates showed no cost increases after 1980.

One often-stated criticism of the Social Security system is that it is costing far more than was anticipated when enacted in 1935. For example, the original law called for a maximum employee tax of only $30 in 1937, but by 1981, such tax had increased to $1,975, an amount 66 times as large. In addition, the average monthly benefit payable to a retired worker was $23 in 1940, but in 1981 it was $385—about 17 times as large.

Of course, the Social Security program has been expanded over the years in a number of ways. Part of this expansion was due to extending coverage of the program to more types of employment, while another significant part was because of the addition of new types of benefits, such as disability benefits in the 1956 Act and Medicare benefits in the 1965 Act. Yet another significant reason for the much larger level of expenditures is the inflation that occurred in the past 45 years. For example, wage levels are now about 13 times as high as they were in the late 1930's, while the price level is about 6-1/2 times as high.

Beyond all of the increases and expansions of the past 45 years, the future cost of the program will rise even further. This trend is indicated by the actuarial cost estimates contained in the 1981 Annual Report of the Board of Trustees of the Old-Age and Survivors Insurance (OASI) and Disability Insurance (DI) Trust Funds. The report shows that the program is facing significant financial problems over both the short run and long range. In early 1981, the Reagan Administration proposed changes that would remedy this situation. Some of those changes have already been enacted in the Omnibus Budget Reconciliation Act of 1981 and the amendments thereto enacted on December 29, 1981.

Although the OASI program has been changed markedly over the years, estimates prepared almost half a century ago for the Social Security Act of 1935 were remarkably accurate when viewed from one perspective—the cost of the program as a percentage of taxable payroll. The actuaries of the Social Security Administration have always emphasized that, in long-range cost projections, this is the element of greatest significance and importance, because it gives an explicit indication of the appropriate and necessary tax rates needed to adequately finance the program.

Table 1 compares the 1935 estimates of the cost of the original program, which involved only old-age retirement benefits and lump-sum refund benefits,[1] with the actual costs of the Old-Age and Survivors Insurance program, each expressed as a percentage of taxable payroll, over the period 1940–80. It is appropriate to use for this comparison only the OASI program, even though the original program did not include survivor benefits. When the latter were added in the 1939 Act, the old-age retirement benefits were reduced in size over the long

---

[*] Deputy Commissioner for Programs, Social Security Administration, from March 16, 1981, until his resignation effective January 8, 1982. He was also Chief Actuary, Social Security Administration, from 1947 to 1970. Mr. Myers is currently the executive director of the National Commission on Social Security Reform. This article is adapted from Actuarial Note No. 110 (SSA Pub. No. 11-11500), November 1981.

[1] In the event that a worker died before receiving monthly benefits at least equal to 3.5 percent of the cumulative covered wages, a lump sum amounting to the difference was payable. Such a procedure was also followed for workers who attained age 65 and did not meet the eligibility conditions for old-age benefits.

**Table 1.**—Comparison of estimated cost of original Old-Age Benefits program with actual cost of Old-Age and Survivors Insurance benefits as percentage of taxable payroll, 1940–80

[Dollar amounts in millions]

[1] Robert J. Myers, **An Analysis of Benefits and the Progress of the Old-Age Reserve Account under Title II of the Social Security Act** (Actuarial Study No. 8), Social Security Board, June 1938, table 11.

[2] **Ibid,** table 13. Also, can be exactly derived from table 1 in W. R. Williamson and Robert J. Myers, **Cost Estimate for Various Modifications of the Old-Age Insurance Benefits under Title II Suggested to the Social Security Board** (Actuarial Note No. 1), Social Security Board, November 1937.

run, so that the cost of the program would remain the same.

This result is indicated by data from an early study of the Office of the Actuary, Social Security Board.[2] The average cost of the program over the period 1937–80 was shown, for the low-cost estimate, to be 4.21 percent of taxable payroll for the 1935 Act, as compared with 4.69 percent for the 1939 Act. The corresponding figures under the high-cost estimate were 6.41 percent and 6.25 percent, respectively. Thus, it can be seen that the estimated long-range cost of the program as it was modified by the 1939 Act was just about the same as was the cost of the original program. (The year-by-year cost estimates for the 1939 Act were not published, and so the analysis made here necessarily uses the published estimates for the 1935 Act.)

The original actuarial cost estimates, expressed as a percentage of taxable payroll, were amazingly close to what actually developed. For the first decade, the actual costs were below those estimates, but then for the next 30 years, the reverse was the case. However, for 1980—obviously because of a considerable number of counterbalancing elements—the cost estimated for the original program was almost exactly the same as what actually occurred.

One such element was the relative level of the maximum taxable earnings base. In the late 1930's, it applied to 92 percent of all earnings in covered employment. Then, in 1950–72, the corresponding figure was generally 70–80 percent, but since then—as a result of both ad hoc and automatic adjustments of the base—it rose to 88 percent for 1980 and to 89 percent for 1981. These fluctuations in the relative level of the taxable earnings base have tended to widen the differences between the actual experience and the estimates for the 1935 Act; otherwise, the figures in the last two columns of table 1 would have been much closer.

The original estimates were not so accurate in other respects, as can be seen from examining the dollar figures as to income, outgo, and trust-fund balance, presented in table 2. Many factors limit comparability of the two sets of figures, but a comparison is interesting. However, it is most important to bear in mind that the technique of using level earnings assumptions (begun in 1935 and used until 1972) was never intended to yield dollar values that would be meaningful for long-distant future years. Rather, the significant figures were always emphasized as being the percentage-of-payroll ones.

The actual tax income for the OASI program for 1980 was 45 times that estimated in 1935. The difference is due not only to the much higher proportion of the labor force covered by the program than under the original law and the inflation in earnings levels that has occurred, but also because the original program contemplated that the financing would be on a modified-reserve basis, rather than a pay-as-you-go basis, as under present law. Thus, under the original program, it was planned that a relatively large interest-earning fund would be built up (as discussed later) and that, consequently, the necessary ultimate contribution rates would be lower than if the program had been based on pay-as-you-go financing.

**Table 2.**—Comparison of estimated income, outgo, and fund balance for original Old-Age Benefits program with actual experience for Old-Age and Survivors Insurance program, calendar year 1980

[Dollar amounts in millions]

| Item | Original estimate [1] | Actual experience | Ratio of actual experience to original estimate |
|---|---|---|---|
| Tax income in year...... | $2,295 | $103,456 | 45.1 |
| Interest on fund in year .. | 1,399 | 1,845 | 1.3 |
| Benefit outgo in year .... | 3,576 | 105,082 | 29.4 |

| Fund balance at end of year ............. | 46,641 | 22,824 | .49 |

[1] Robert J. Myers, **An Analysis of Benefits and the Progress of the Old-Age Reserve Account under Title II of the Social Security Act** (Actuarial Study No. 8), Social Security Board, June 1938, table 11. The figure for tax income is derived from the published figure of $2,180.5 million by dividing it by 95 percent to reflect that the figures shown for "Appropriation to Reserve" are net of estimated administrative expenses (see page 31 of the Actuarial Study). Correspondingly the figure for administrative expenses is merely the difference between the Social Security tax income and $2,180.5 million.

---

[2] Robert J. Myers, **An Analysis of the Benefits and Costs under Title II of the Social Security Amendments of 1939** (Actuarial Study No. 14), Social Security Board, 1941, table 14.

The actual interest earnings of the OASI Trust Fund in 1980 were only 32 percent larger than the estimated interest receipts for the original program—the result of several somewhat offsetting factors. First, the actual fund balance was only about half as large as that estimated for the original program (as will be discussed later). Second, the actual average interest rate was much higher than was assumed for the original program—8.9 percent versus 3 percent.

Actual benefit outgo in 1980 was 29 times as high as estimated in 1935. At the same time, actual administrative expenses were 10 times as high. The differential would have been much larger had it not been for the fact that the 1935 estimates assumed that, ultimately, administrative expenses would be 5 percent of contribution income, whereas this ratio has been only about 1-1/4 percent for OASI in recent years.

Finally, the reverse situation occurred for the fund balance at the end of 1980. The actual OASI Trust Fund at that time was only about half as large as was originally estimated for 1980 ($46.6 billion). This difference, of course, reflects the change in the financing basis mentioned previously. Also, in the actual past experience as to end-of-month trust-fund balances, the OASI Trust Fund reached a peak of $40.6 billion for May 1975; the peak for the OASI and DI Trust Funds combined was $48.6 billion in the same month. Thus, the original estimate of almost $47 billion was—because of many counterbalancing elements—almost fulfilled in the recent past.

In conclusion, although the actual current cost of the OASI program as a percentage of taxable payroll is quite close to the estimates for 1980, made when the initial program was enacted, this does not mean that the overall cost of the Social Security program has not grown beyond the original expectations. For one thing, the Social Security program has been expanded, from a cost standpoint, by the addition of the Disability Insurance (DI) and Hospital Insurance (HI) programs. In 1980, for example, these two programs resulted in the total cost being 13.0 percent of taxable payroll (compared with 9.4 percent for OASI only).

The estimates for the original law assumed that the cost would level off after 1980. Now, however, the ultimate—beginning with year 2030—costs (as a percentage of taxable payroll) for the OASI program are estimated to be about 45-55 percent higher than the current cost (according to the intermediate cost estimates in the 1981 Trustees Report, which gives estimates to 2055). Furthermore, the costs of the DI and HI programs are estimated to increase significantly (as a percentage of taxable payroll) in the long-range future.

# Notes and Brief Reports

## A Look at the Economic Status of the Aged Then and Now*

With this issue, the **Social Security Bulletin** commences its 45th year of publication. Writing in volume 1, numbers 1-3 in the March 1938 issue, Social Security Board Chairman Arthur J. Altmeyer—one of the chief technical architects of the Social Security Act—expressed his hope that the **Bulletin** would promote general understanding of the contribution of the Social Security programs in the United States.[1]

The 1935 Social Security Act committed the Federal Government to provide a level of economic security for the underprivileged. In addition to administering those programs initiated by the Act—Old-Age Insurance (title II), Unemployment Insurance (title III), and a Federal-State matching fund program for assistance to the aged, the blind, and the fatherless (titles I and X)—the Social Security Board was responsible for studying and making recommendations as to "methods of providing economic security through social insurance, and as to legislation and matters of administrative policy concerning old-age pensions, unemployment compensation . . . and related subjects."[2]

The **Bulletin** was intended to record developments in the programs administered by the Social Security Board, as well as in health and welfare services programs administered by other Federal agencies. In addition, Chairman Altmeyer continued, "It is with the aim of fulfilling its own responsibilities for study and administration and of facilitating the efforts of other agencies concerned with the social services that the Board has started publication of the **Social Security Bulletin**."[3]

A comparison of the topics discussed in that first issue of the **Bulletin** with those of concern today presents some striking contrasts and similarities. The featured article in that first issue was devoted to an assessment of the economic status of the aged. Its findings—and the methods used to count the numbers of persons reliant on different income sources—are, of course, in marked contrast to what is known about the economic circumstances of the aged today. Other articles in the first issue described administrative developments in all the programs administered by the Social Security Board and many of the themes presented—from the need for more simplified forms to debate over extending Social Security coverage—are still familiar. To provide an understanding of the needs of the population the Social Security Act would serve, a feature article in the first issue of the **Bulletin,** by Marjorie Shearon of the Social Security Board's Bureau of Research and Statistics, attempted to quantify the economic status of the aged in 1936 and 1937.

Nearly 8 million persons were aged 65 or older when the **Bulletin** began publication. At that time, no indepth studies nor detailed program statistics were available for that segment of the population. Payroll deductions began in 1937 for the Old-Age Insurance program, but benefit payments would not begin until 1940.

The Shearon article reported that although the Supreme Court had confirmed the constitutionality of old-age insurance, some debate over it continued: "Opinion in the press and elsewhere has been divided as to the need of the aged for special consideration and protective legislation. Many individualists still believe that provision for old age should be a matter of personal initiative and that, by and large, only the improvident find it necessary to seek public or private charity."[4]

Shearon explained, "In evaluating such statements and in arriving at a quantitative conception of the extent to which persons aged 65 and over are dependent upon others for support, it would be highly desirable if we could ascertain the economic status of each person in this age group." However, she noted, "Clearly no direct method of determining the means of support of the aged is possible."[5]

Lacking any form of comprehensive survey or other data on the income of the elderly, Shearon used often crude techniques to estimate the number of persons who might be expected to be receiving income from different sources. She assumed no overlap between income receipt from the different sources; that is, she assumed

that none of those who had income from savings, for example, also had income from employment. Her totals undoubtedly underestimated the number of persons without income and overestimated the total of those with income. Today, of course, the Bureau of the Census collects detailed information about the amounts and kinds of income received by different segments of the population.

Shearon's estimates will be compared in this article primarily with 1979 income data from the March 1980 Current Population Survey.[6] To be comparable with the 1936-37 data, this note will count a person as having had income from a given source regardless of how small that income was. The primary unit of analysis in this note is individual persons. Data on the relative importance of different types of income is not yet available for 1979. Therefore, data on the importance of different income sources is occasionally presented using 1978 income data from the March 1979 Current Population Survey. The analysis of the 1978 data is based on aged units—married couples where at least one spouse was 65 or older and unmarried persons—rather than individuals.[7] Like all household surveys, the Current Population Survey finds that respondents tend to underreport income, particularly when the amounts received are small. However, the survey unquestionably provides more accurate estimates than the techniques available in 1937.

## Overall Findings

Shearon divided the population into two groups: The "self-dependent," those who sustained themselves on the basis of earnings, income from assets, veterans' benefits, or public or private pensions and the "dependent," those who relied on public assistance, private social agencies, or support from friends and/or relatives.

Of the estimated 7.6 million noninstitutionalized persons aged 65 or older in the United States and territories of Alaska and Hawaii in January 1937, Shearon estimated that roughly one-third (2.7 million) were self-dependent (table 1). She noted, "It is assumed that such persons were essentially self-sustaining and able at least to subsist on their income." However, she continued, "Possibly one-half of them (1.4 million) were partially dependent upon friends and relatives for a more comfortable living and received some aid in the form of food, clothing, shelter, spending money, medical care, or recreation."[8] In 1979, about 97 percent of those aged 65 and older were self-dependent. Most of the difference can be traced to Social Security benefits and more widespread reliance on income from savings and investment, and, to some extent, private pensions.

**Table 1.—Dependency status of population aged 65 and older, 1937 and 1978**

| Status | 1937 | 1978 |
|---|---|---|
| Total number (in thousands) | 7,620 | 23,743 |
| Total percent | 100 | 100 |
| Self-dependent | 35.1 | 96.8 |
| Dependent | 56.0 | 3.2 |
| Public or private assistance or other | 18.5 | 1.7 |
| No income | 47.5 | 1.5 |

Source: Marjorie Shearon, "Economic Status of the Aged," **Social Security Bulletin**, March 1938 and Susan Grad, **Income of the Population Aged 55 and Over** (Staff Paper No. 41), Office of Research and Statistics, Office of Policy, Social Security Administration, 1981, tables 1, 29, and 30.

The other two-thirds of the aged in 1937 were dependent. Nearly one-fifth of the aged relied almost entirely on public assistance or aid from private social agencies. The remainder, 47 percent of the noninstitutionalized population, were without apparent means of support: "Presumably, these 3.5 million persons must be wholly dependent on friends or relatives."[9] Shearon found the validity of this estimate to be confirmed in an earlier study by the New York State Commission on Old Age Security, which indicated that 50.4 percent of persons aged 65 and older in New York State in 1929 were primarily dependent on friends or relatives for support.

Today, the Current Population Survey indicates that only 1.5 percent of the 23.7 million persons aged 65 and older have no income of their own and an additional 1.7 percent rely on public assistance for more than 90 percent of their income.[10]

### The Self-Dependent

In 1937, the three most frequent sources of income for the self-dependent were earnings, income from assets or property, and government or private pensions. In contrast, the most common source of income in 1979 was, of course, Social Security benefits, followed by income from assets or property, government or private pensions, and earnings, as shown in table 2.

The 1937 estimate of the number of persons with employment income was taken from the specially created cabinet-level Committee on Economic Security, which planned President Franklin D. Roosevelt's social programs, and a private New York institute, both of which calculated that about 1 million persons aged 65 and

[1] Data do not add to 100 percent because of overlapping receipt of income from multiple sources.

Sources: Data derived from Marjorie Shearon, "Economic Status of the Aged," **Social Security Bulletin** and Bureau of the Census, "Money Income of Households and Families, 1979," **Current Population Reports** (Series P-60, No. 129), 1981, table 55.

older were employed. Shearon considered these estimates reasonable. She indicated that numerous factors had decreased the number of aged in gainful occupations, reported as 2.2 million in the 1930 census.

She speculated that among the factors explaining the decrease would be "fixation in the public mind" of 65 as the retirement age, "after which persons are usually adjudged 'unemployable' " as well as "underwriting requirements of group insurance schemes which militate against older workers," and increased competition for new jobs as the Nation struggled out of the Depression from "younger, stronger, more adaptable workers, especially in the mechanized trades." [11]

In retrospect, that estimate of the number of employed persons seems somewhat low. The 1940 census found that 2.1 million persons aged 65 and older, or 23 percent of that population, were "gainful workers." [12] Although that figure, like today's estimates of the labor force, includes persons who were unemployed but seeking work, it does not seem probable that fully half the aged labor force was out of work, even at the peak of the Depression.

Shearon's estimate of income from assets was even more approximate than the earnings data. Her analysis of Federal Trade Commission data from 1912 through 1923 indicated that about four-fifths of all persons dying in those years had estates too small to probate; the average value of the remaining one-fifth was about $250. She reasoned that somewhat less than one-fifth of the aged, say 15 percent, would have wealth of as much as $250, since they would no longer be accumulating savings but would instead be drawing on capital. She acknowledged, however, that $250—equivalent to $1,435 in 1980 dollars—would be "entirely inadequate to provide an independent living during old age." [13] Thus, many less than 15 percent of the aged in 1937 were likely to have been supported primarily by asset income.

Although a much larger fraction of the aged today have some asset income, this is still a primary income source for very few. Detailed analysis of the 1979 Current Population Survey found that 62 percent of the units aged 65 and older had some asset income in 1978. Only 39 percent of those, or 24 percent of the total number of units aged 65 or older, had income from assets amounting to more than $1,500 a year.[14] And only 7 percent of the units with asset income received at least half their total income from this source.[15]

The number of aged with pension or private annuity income, even excluding Social Security, has increased even more dramatically than the portion with earnings and asset income, although the total with government or private pensions is still relatively small.

One of Shearon's most detailed data sources was for civil service and other Federal pensions. For example, she found that 24,727 persons were receiving military pensions (including 160 persons from the Coast Guard's Life Saving Service). About 10,000 former civil servants who had been involuntarily separated after more than 30 years of service were receiving annuities. An "other Federal employees" category of annuitants included 553 retired Lighthouse Service workers, 80 foreign service officers, 24 Department of Justice judges, and 9 Coast and Geodetic Survey commissioned officers. In all, less than 1 percent of the aged population were receiving Federal civil service or military retirement pensions, compared with about 3 percent in 1979. An additional 0.6 percent were receiving veterans' benefits, compared with about 4 percent in 1979.

The only other sources of income for the self-dependent in 1937 were State and/or local pensions and private pensions and annuities. The data available from State reports for 1937 indicated that 5,771 persons aged 65 and older were receiving benefits from the 11 States with plans for employees other than policemen, firemen, and teachers. (The number of beneficiaries per State ranged from 37 in Maine and 50 in Colorado to 2,941 in New York.)

Estimates from the National Education Association suggested that about 7,000 teachers aged 65 or older were receiving benefits from 59 local systems. An estimated 25,000 policemen and firemen were assumed to be receiving retirement benefits under various local plans. This latter estimate was derived from the number of policemen and firemen counted in the 1930 census (204,700). Shearon then assumed that all were covered by retirement systems, and that the ratio of retirees to active workers was 10–15 percent. Thus, she calculated that between 20,500 and 30,750 policemen and firemen were aged 65 or older and were retired. Shearon used the figure 25,000—roughly the midpoint of the range—as the basis for her estimate. An estimate of 10,000 other municipal retirees was similarly calculated.

[13] Marjorie Shearon, "Economic Status of the Aged," page 8.

[14] Susan Grad, **Income of the Population Aged 55 and Over**, tables 1 and 27.

[15] **Ibid.**, table 29.

In sum, about 0.9 percent of those aged 65 and older were estimated to be receiving State or local pensions in the mid-1930's. Today, approximately 5 percent of the aged are beneficiaries of some 5,788 State and local plans.[16]

Shearon guessed that about 150,000 persons (including 53,000 pensioners of the largest railroads) were receiving private industrial pensions at the end of 1936. A private survey had suggested that Canada and the United States together might have a total of 175,000 persons receiving such pensions. The estimate of 150,000 pensioners in the United States was derived "by considering the ratio of the total population of the United States to that in Canada and the ratio of group insurance business in the two countries. It [was] assumed that 5 percent of total industrial pensioners may be Canadians and that approximately 10 percent are under 65." [17] Shearon noted, however, that the 150,000 figure might be too high, because at the beginning of 1935, only 116,145 pensioners, including those under age 65, in both the United States and Canada were receiving pensions under plans operated by 145 companies and about 50 railroads, as well as under all industrial group annuity contracts.

She also reported that the total number of employees covered by these various plans at the beginning of 1935 was about 2.5 million or 5 percent of the civilian labor force.[18] Today, about half of all full-time private wage and salary workers, or 30 percent of the total civilian labor force, is in employment covered by private industrial plans.[19]

In addition to those covered by private industrial plans, Shearon calculated that 35,000 were receiving benefits from other private pensions and that 204,000 were receiving income from private insurance annuities. Thus, 5 percent of all aged individuals were estimated to be receiving income from all these private sources in 1937, compared with 17 percent of aged individuals in 1979.[20] Even now, however, only 2 percent of the aged units rely on private pensions or annuities for 50 percent or more of their income.[21]

The biggest difference in income sources of the aged between 1937 and now is, of course, the availability of Social Security benefits. As indicated earlier, the Current Population Survey reported that 90 percent of the noninstitutionalized population aged 65 and older now receive Social Security and/or railroad retirement benefits.[22] In 1978, for 58 percent of the aged units, Social Security represented at least half of all income, and for 23 percent, it represented at least 90 percent of all income.[23]

## The Dependent

As noted above, in 1937, about two-thirds of the population aged 65 and older was classified as being dependent: 17 percent were estimated to be relying primarily on public assistance programs or private charity and almost 50 percent had no means of support except friends or relatives.

Today, only 9 percent of all aged individuals receive State or Federal public assistance (primarily Supplemental Security Income) and only 1.5 percent report having no income.[24] And only 1.7 percent of all aged persons rely on public assistance for 90 percent or more of their income.[25] Thus, very roughly, only 3 percent or so of those aged 65 or older could be called dependent in the same sense used in 1937.

Among those receiving income from sources other than friends or relatives in 1936–37 were:

- About 9,000 aged blind persons receiving public assistance payments under the Social Security Act.
- About 1,116,000 persons receiving old-age assistance, also under the Social Security Act.
- About 200,000 aged persons receiving State-administered general relief, poor relief, or old-age assistance *not* under the Social Security Act.

In addition, about 58,000 aged persons were estimated to be participating in Federal programs administered by the Works Progress Administration.

Shearon also estimated that 10,000 persons could be receiving income from private charities, although she acknowledged that this estimate was probably too high. She explained: "Pressure on private agencies is so great and limitation of funds so pronounced that it is clear the aged can count on little from this source." She added that the 10,000 estimate could be "doubled or trebled without changing the fact that the number of aged who receive regular support from private *organized* charity is negligible."

### The Institutionalized Population

The institutionalized population also was considered dependent in 1937. Because this population is excluded from the Current Population Survey, the source of most of the current data cited here, it is being treated separately.

Shearon estimated that in 1936-37, about 196,000 persons—or 2.5 percent of those aged 65 and older—were institutionalized. These included:

- 17,000 in State and Federal homes for veterans and State homes for civilians.
- 72,000 in hospitals for mental illness.
- 2,000 in correctional institutions.
- 50,000 in local homes, almshouses, county homes, poor farms, and infirmaries.

Shearon noted: "In these various local institutions are to be found the friendless and destitute of all ages, the infirm, delinquent, dependent and defective. County homes and poor farms, which have been condemned in the main as expensive to operate and as socially inadequate to meet the needs of the aged, will probably be supplanted in time and the aged who are without friends or relatives or homes of their own and who require institutional care will be provided for in more appropriate ways."[26]

In 1976, the most recent year for which survey data are available, about 1 million persons or about 4 percent of those aged 65 and older were institutionalized in long-term care facilities, according to a special Census survey.[27] Of these, 94 percent were in nursing homes. The remainder were in facilities for the physically or mentally handicapped or other facilities. The majority—60 percent—were in facilities operated by proprietary organizations. Thirty percent were in institutions operated by churches or other nonprofit groups, and 10 percent were in facilities operated by Federal, State, or local public agencies.

As shown in table 3, the most common source of financial support for these persons was Medicaid, received by 48 percent of the institutionalized residents. About 42 percent had some Social Security income, and 31 percent received support from their families.

**Table 3.**—Selected sources of support for the institutionalized population aged 65 and older, 1976

| Source | 1976 |
|---|---|
| Total number | 1,028,000 |
| Total percent | [1]100 |
| With no support | 8.4 |
| With support [1] | 91.6 |
| Insurance or annuity | 1.7 |
| Retirement plan | 4.7 |
| Social Security | 41.9 |
| Medicare | 5.3 |
| Supplementary Security Income | 6.2 |
| Medicaid | 47.5 |
| Veterans' benefits | 3.9 |
| Other Federal programs | .8 |
| State or local assistance | 4.1 |
| Families | 31.1 |

[1] Percents add to more than 100 because of overlapping receipt of income from multiple sources and because only selected categories are included.

As in 1937, the aged were not likely to be found in correctional institutions. As of September 1981, only 176 persons aged 65 or older were in Federal prisons (less than 1 percent of the total Federal prison population), according to administrative records.[28] A 1979 survey indicated that only 1,160 persons aged 66 or older were in State correctional facilities.[29]

## Program Administration, 1938

### Unemployment Insurance

The "outstanding event" of January 1938, the **Bulletin** noted, was the start of full operation of the unemployment compensation program in 21 States and the District of Columbia.[30] This came at a time when unemployment was increasing again—it would reach 19 percent in 1938—after falling from a peak of 25 percent in 1933 to 14.3 percent in 1937.[31] The large volume of applications for unemployment compensation led to "problems whose existence had been known or anticipated by only a relatively small group directly concerned with the administration of the program," according to a review of the startup operation.[32] Noting that all States were experiencing some difficulties, the **Bulletin** reported that some were working 7-day weeks. However,

[31] Bureau of the Census, **Statistical Abstract, 1956**, table 235, 1956.

[32] Bureau of Research and Statistics, "Social Security in Review," page 3.

"Progress in this direction is being reported by all the States. Some delay, however, will be inevitable for a long time to come in a number of cases, either because of the failure of the worker to supply all the necessary information on his claim for benefits, because of delays on the part of the agency in obtaining records from delinquent employers, or because of disputes as to the benefit rights of the worker."[33]

Other problems noted were "the interrelationship between unemployment and relief, administrative difficulties in the payment of benefits to workers who move across State lines, the problem of compensation for partial unemployment, and the inapplicability of unemployment compensation to protection against loss of income during periods of illness and disability."[34]

The **Bulletin** also reported that "the relationship of sickness to problems of economic security and to possible development of a national health program" had been discussed in a recent report of a Presidentially appointed committee. The committee stated, "It is cause for grave concern, and for action, that the poor of our cities experience sickness and mortality rates as high as were the gross rates of 50 years ago . . . . A large proportion of the population—certainly one-third and perhaps one-half—is too poor to afford the full cost of adequate medical care on any basis."[35]

## Old-Age Insurance

Although monthly old-age insurance cash benefits would not begin for several years, the **Bulletin** noted "the enormous task of assigning account numbers to the workers covered by the program." Some 37.8 million numbers had been assigned by February 1938.[36] However, "The problem of recordkeeping for approximately 35 million potential beneficiaries has just begun."[37]

The first Advisory Council had been appointed and had visited the Baltimore headquarters of the Social Security Board "to observe the process involved in setting up and maintaining the wage records of the millions of workers who are accumulating rights to benefits," and "expressed itself as being favorably impressed with the efficient way in which these operations are being conducted."[38]

Claims for lump-sum death benefits were being processed at the rate of a thousand per day; the average benefit paid was $31.68, or about $182 in 1980 dollars. In 1981, about 5,400 lump-sum death payments were processed daily; the average award was $253.[39]

And even then, concern was being expressed about the size of the balance in the reserves. The **Bulletin** noted that several bills addressing Social Security financing had been introduced in Congress and that the issue had been discussed recently by the Advisory Council. The council, however, was not convinced that "immediate change is of greater importance than mature analysis." The council recommended that "still" further data be gathered.[40]

Simplified tax collection forms and extensions of coverage were the concerns expressed by small businessmen in 1938. To the notion of extending coverage, President Roosevelt replied that he "was opposed to immediate extension of these programs to include all groups of the population." He remarked that "England has taken 27 years to work out its social security system and has amended its law almost every year."[41]

## Assistance for the Needy

The **Bulletin** also reported that the transition was being made quickly from State to Federal financing of assistance for the needy aged, blind, and dependent. By January 1938, there were 35 States with plans approved by the Social Security Board for all three types of assistance and only one—Virginia—had not had a plan approved for at least one program.

"This comparative promptness in enacting old-age assistance legislation may possibly be explained by one or more of several circumstances," the **Bulletin** reported. "The dependent aged have always represented a large proportion of that population which is in need of public or private assistance. Prior to the Depression, many of the aged were cared for by their children. During and since the Depression, the care for the dependent aged has become more and more a public responsibility, since many children, because of reduced economic circumstances, are no longer able to support their parents."[42]

The **Bulletin** continued, "Added to this fact . . . is the fact that [the aged] are, for the most part, unemployable and cannot, therefore, be aided through employment programs. It is only natural, therefore, that States should welcome a program by which part of the large cost of the care of this dependent group is met with Federal funds."[43] Total assistance expenditures under the Social Security Act in January 1938, were $39.5 million, of which $31.2 million was for old-age assistance.[44]

Over 4 decades later, the **Social Security Bulletin** continues as the journal of record for those programs for which the Social Security Administration (the Board's successor agency) is responsible. During this period the scope and administration of the programs have changed with the Nation's economy and as the demographics of the population the Act was designed to serve changed.

[1] Emergency relief funds of $1,630.3 million in 1940 total, not included elsewhere. Includes training allowances to unemployed workers under Area Redevelopment Act and Manpower Development and Training Act for 1961–75, not shown separately.

[2] Beginning December 1980, includes public assistance payment revisions for 1940–79.

[3] Retirement and survivor benefits beginning 1940; disability benefits beginning 1957. Beginning Oct. 1966, includes special benefits authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[4] Includes annuities to widows under joint-and-survivor election before 1947. Beginning Feb. 1967, includes supplemental annuities for career railroad employees.

[5] Excludes refunds of contributions to employees who leave service.

[6] Includes survivor annuities under joint-and-survivor elections before 1948.

[7] Represents Federal contributory systems other than civil service, Federal noncontributory systems for civilian employees and career military personnel, and systems for State and local government employees. Monthly data not available.

[8] Payments to veterans and survivors of deceased veterans, including special allowances for survivors of veterans who did not qualify under OASDHI (Servicemen's and Veterans' Survivor Benefit Act of 1956) and through June 1973, subsistence payments to disabled veterans undergoing training.

[9] Death payments.

[10] Includes annual and monthly data for railroad retirement, veterans' programs, and Federal civil service retirement. For "other" public employee systems, annual data only.

[11] Annual and monthly totals include regular State unemployment insurance program and payments made by States as agents of the Federal Government under the Federal employees' unemployment compensation program and under the Ex-Servicemen's Compensation Act of 1958. Annual data only for payments under Servicemen's Readjustment Act of 1944, Veterans' Readjustment Act of 1952, Trade Expansion Act of 1962, Disaster Relief Act of 1970, and the temporary and permanent extended unemployment insurance programs. Beginning 1961, includes program in Puerto Rico.

[12] Benefits in Rhode Island (from 1943), in California (from 1947), in New Jersey (from 1949), in New York (from 1950), in Puerto Rico (from 1970), including payments under private plans where applicable. Monthly data not available.

[13] Benefits began 1947.

[14] Under Federal workers' compensation laws and under State laws paid by private insurance carriers, State funds, and self-insurers. Beginning 1959, includes data for Alaska and Hawaii. Monthly data refer only to Federal "black lung" benefits administered by Social Security Administration (starting 1970).

[15] Includes aid to families with dependent children and general assistance. Through 1973 includes old-age assistance, aid to the blind, and aid to the permanently and totally disabled. Includes payments to intermediate-care facilities (July 1968–December 1971), and payments for emergency assistance, beginning July 1969. Includes money payments under medical assistance for the aged (1960–69). Excludes medical vendor payments. Starting 1974, includes money payments to the aged, blind, and disabled in Guam, Puerto Rico, and the Virgin Islands under federally aided public assistance programs.

[16] Supersedes the public assistance programs of old-age assistance, aid to the blind, and aid to the permanently and totally disabled in the 50 States and the District of Columbia, beginning 1974; beginning 1978, in the Northern Mariana Islands. Annual, but not monthly, totals include payments under State-administered supplementary programs.

[17] Data not available.

Source: Based on reports of administrative agencies on a checks-issued basis (including retroactive payments) where available. Data for public assistance and State unemployment insurance programs adjusted monthly, other data adjusted annually.

---

[1] Benefit expenditures from the Federal hospital insurance and supplementary medical insurance trust funds as reported by the U.S. Treasury.

[2] Excludes payments by Railroad Retirement Board for beneficiaries in Canadian hospitals.

[3] Benefits in California and New York (from 1950), including payments under private plans. Monthly data not available.

[4] Benefits under Federal workers' compensation laws and under State laws paid by private insurance carriers, State funds, and self-insurers. Beginning 1959, includes data for Alaska and Hawaii. Monthly data not available.

[5] Federal matching for medical vendor payments under public assistance began October 1950.

[6] Data not available.

Source: U.S. Treasury and unpublished data from administrative agencies.

## Table M-3.—Selected social insurance and related programs: Beneficiaries of cash payments, 1940–81

[1] Includes dependents.

[2] Beginning October 1966, includes special benefits authorized by 1966 legislation for persons aged 72 and over and not insured under the regular or transitional provisions of the Social Security Act.

[3] Monthly number at end of quarter.

[4] Average number during 14-day registration period.

[5] Average weekly number. Includes regular State unemployment insurance, the Federal employees' unemployment compensation program, and the ex-servicemen's compensation program.

[6] Includes dependents and survivors.

[7] Less than 500.

[8] Data not available.

Source: Based on reports of administrative agencies.

[1] Represents contributions of employees, and the self-employed in employments covered by OASDHI under the Social Security Act, on an estimated basis, with suitable subsequent adjustments. Data for earlier years reflect former appropriation bases. Includes deposits by States under voluntary coverage agreements. Employee-tax refunds deducted. Excludes transfer from general revenues.

[2] Excludes transfers between OASDHI system and railroad retirement account under the financial interchange provisions of the Railroad Retirement Act.

[3] Represents employee and Government contributions. Beginning 1968, also includes Foreign Service and contributory survivor programs for Federal judiciary and Tax Court. For civil service, employee share includes voluntary contributions to purchase additional annuity; government share includes Federal and District of Columbia agency contributions and, beginning 1968, Federal payment for current unfunded liability.

[4] Beginning 1959, net of tax refunds. Contributions for hospital insurance of railroad workers are collected and reported with railroad retirement contribution initially and are transferred once a year (usually in August) to the hospital insurance trust fund; data for that month only are adjusted by the Treasury source to reflect the transfer.

[5] Excludes reimbursement from Treasury general funds for cost of benefits for persons not insured for cash benefits under OASDHI or railroad retirement. Includes contributions for hospital insurance coverage of railroad workers (principal amount only), see footnote 4; and, beginning July 1973, premiums for voluntary coverage of uninsured individuals aged 65 and over.

[6] Through 1952 represents deposits in State clearing accounts of contributions plus penalties and interest collected from employers and contributions from employees (3 States in recent years), as reported by State agencies (to Department of Labor, 1950–52). Starting 1953, represents State deposits in (Federal) unemployment trust fund.

[7] Represents taxes paid by employers under the Federal Unemployment Tax Act. Beginning 1961, net of tax refunds. Includes tax proceeds for financing temporary extended unemployment compensation programs for 1958 and 1961. December 1976 figure includes treasury adjustments (minus) for misclassification of two prior month's taxes.

[8] Beginning 1947, also covers railroad temporary disability insurance.

[9] Preliminary data.

[10] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (Oct. 1, 1976).

---

[1] Equals amounts appropriated (estimated tax collections, subsequently adjusted). Includes deposits by States under voluntary coverage agreements and deductions for refund of estimated employee-tax overpayment. Early years reflect former appropriation bases.

[2] From 1947 to 1951, for benefits with respect to certain World War II veterans. Beginning 1966, for military wage credits, and beginning Dec. 1968 for military credits and Federal payment for special age-72 benefits, see footnote 4.

[3] Includes interfund transfer of interest on reimbursed administrative expenses, 1958 to date (see footnote 6).

[4] Before deductions for (1) SMI premium payments and, when applicable, (2) recoupment of overpayments of hospital and medical service benefits provided to OASI beneficiaries. Includes special benefits for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[5] The purpose of the financial interchange provisions of the Railroad Retirement Act, as amended, is to place the trust funds in the same position in which they would have been had railroad employment always been covered under OASDHI. Negative figures represent transfers to OASI trust fund. Excludes transfers to HI trust fund for hospital insurance coverage of railroad workers (accounted for in table M–7).

[6] Beginning 1951, adjusted for reimbursement to trust fund of small amounts for gifts, sales, or services. Beginning 1953, includes expenses for central and regional office building construction. Except for reimbursements from the appropriate trust fund to Treasury Department for its expenses as incurred, beginning 1957 administrative expenses for OASI and DI were paid initially from OASI trust fund with subsequent reimbursement, plus interest (see footnote 3), from DI trust fund for allocated cost of DI operations. Beginning 1966, subject to subsequent adjustment among all four social security trust funds for allocated cost of each operation.

[7] Book value: includes net unamortized premium and discount, accrued interest purchased, and repayment of interest accrued on bonds at time of purchase.

[8] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[9] Reflects assets of predecessor fund, the old age reserve account, January 1937–December 1939.

[10] Preliminary data.

[11] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (Oct. 1, 1976).

[12] Public Law 96-403 approved October 9, 1980, provides for the reallocation of social security tax receipts between the OASI and DI trust funds for calendar years 1980–81. Transfers from the DI to the OASI fund were required to implement the change retroactive to January 1980. A $3,528,795,000 transfer in October 1980 represented the accumulated tax receipts, and a $120,801,000 transfer in April 1981 was the interest earned on this amount.

---

[1] Equals amounts appropriated (estimated tax collections, subsequently adjusted). Includes deposits by States under voluntary coverage agreements and deductions for refund of estimated employee-tax overpayment. Early years reflect appropriation bases.

[2] Transfers (principal only) from the railroad retirement account with respect to contributions for disability insurance coverage of railroad workers.

[3] From 1950-51, for benefits with respect to certain World War II veterans. Beginning 1966, for military wage credits, and beginning Dec. 1968, for military credits and Federal payment for special age-72 benefits; see footnote 4.

[4] Includes interfund transfer of interest on reimbursed administrative expenses. 1958 to date (see footnote 6).

[5] Before deductions for (1) SMI premium payments and, when applicable, (2) recoupment of overpayments of hospital and medical service benefits provided to OASI beneficiaries. Includes special benefits for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[6] The purpose of the financial interchange provisions of the Railroad Retirement Act, as amended, is to place the trust funds in the same position in which they would have been had railroad employment always been covered under OASDHI. Negative figures represent transfers to OASI trust fund. Excludes transfers to HI trust fund for hospital insurance coverage of railroad workers (accounted for in table M-7).

[7] Beginning 1951, adjusted for reimbursement to trust fund of small amounts for gifts, sales, or services. Beginning 1953, includes expenses for central and regional office building construction. Except for reimbursements from the appropriate trust fund to Treasury Department for its expenses as incurred, beginning 1957 administrative expenses for OASI and DI were paid initially from OASI trust fund with subsequent reimbursement, plus interest (see footnote 3), from DI trust fund for allocated cost of DI operations. Beginning 1966, subject to subsequent adjustment among all 4 social security trust funds for allocated cost of each operation.

[8] Book value: includes net unamortized premium and discount, accrued interest purchased, and repayment of interest accrued on bonds at time of purchase.

[9] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[10] Preliminary data.

[11] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (Oct. 1, 1976).

[12] Public Law 96-403 approved October 9, 1980, provides for the reallocation of social security tax receipts between the OASI and DI trust funds for calendar years 1980-81. Transfers from the DI to the OASI fund were required to implement the change retroactive to January 1980. A $3,528,795,000 transfer in October 1980 represented the accumulated tax receipts, and a $120,801,000 transfer in April 1981 was the interest earned on this amount.

[1] Represents amounts appropriated (estimated tax collections with suitable subsequent adjustments) after deductions for refund of estimated amount of employee-tax overpayment; and, beginning July 1973, premiums for coverage of uninsured individuals aged 65 and over.

[2] Transfers (principal only) from the railroad retirement account with respect to contributions for hospital insurance coverage of railroad workers.

[3] Represents Federal Government transfers from general funds appropriations to meet costs of benefits for persons not insured for cash benefits under OASDHI or railroad retirement and for costs of benefits arising from military wage credits.

[4] Interest and profit on investments after transfers of interest or reimbursed administrative expenses (see footnote 6) and interest on amounts transferred from railroad retirement account (see footnote 3).

[5] Represents (1) payment vouchers on letters of credit issued to fiscal intermediaries under sec. 1816 and (2) direct payments to providers of services under sec. 1815 of the Social Security Act.

[6] Subject to subsequent adjustment among all four social security trust funds for allocated cost of each operation. Fiscal year 1966 includes "tool-up" period from date of enactment of Social Security Amendments of 1965 (July 20).

[7] Book value: Includes net unamortized premium and discount, and, when applicable, accrued interest purchased and repayments on accounts of interest accrued on bonds at time of purchase.

[8] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[9] Preliminary data.

[10] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (Oct. 1, 1976).

---

[1] Represents voluntary premium payments from and in behalf of the insured aged and (beginning July 1973) disabled.

[2] Represents Federal Government transfers from general funds appropriations to match aggregate premiums paid.

[3] Represents interest and profit on investments, after transfers of interest on reimbursed administrative expenses (see footnote 5).

[4] Represents payment vouchers on letters of credit issued to carriers under section 1842 of the Social Security Act.

[5] Subject to subsequent adjustment among all 4 social security trust funds for allocated cost of each operation. Fiscal year 1966 includes "tool-up" period from date of enactment of Social Security Amendments of 1965 (July 30).

[6] Book value: Includes net unamortized premium and discount, and, when applicable, accrued interest purchased and repayments on account of interest accrued on bonds at the time of purchase.

[7] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[8] Preliminary data

[9] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (Oct. 1, 1976).

[1] At the end of 1980 an estimated 40,000 Railroad Retirement beneficiaries would have been eligible for Social Security benefits had they applied. These persons receive their Social Security benefits as part of their Railroad Retirement annuity and are not included in the above tabulations. Of these 40,000 beneficiaries, 19,000 were retired workers, 5,500 were disabled workers, and 15,500 were spouses and children.

[2] Benefits paid from the OASI trust fund to retired workers and their spouses and children and to all survivors. Includes special benefits authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[3] Benefits paid from the DI trust fund to disabled workers and their spouses and children.

## Table M-10.—OASDI cash benefits: Number of monthly benefits in current-payment status for retired workers and their spouses and children and for survivors, 1940–81

---

[1] Persons aged 65 and over (and aged 62–64, beginning 1956 for women and 1961 for men).

[2] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[5] Includes, beginning September 1965, widows aged 60–61 and entitled surviving divorced wives aged 60 and over; beginning March 1968, disabled widows aged 50–59 and disabled widowers aged 50–61; and, beginning January 1973, nondisabled widowers aged 60–61.

[6] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

**Table M-11.**—OASDI cash benefits: Amount of monthly benefits in current-payment status for retired workers and their spouses and children and for survivors, 1940–81

---

[1] Persons aged 65 and over (and aged 62-64, beginning 1956 for women and 1961 for men).

[2] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18-21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[5] Includes, beginning September 1965, widows aged 60-61 and entitled surviving divorced wives aged 60 and over; beginning March 1968, disabled widows aged 50-59 and disabled widowers aged 50-61; and, beginning January 1973, nondisabled widowers aged 60-61.

[6] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

**Table M-12.—OASDI cash benefits: Monthly benefits in current-payment status for disabled workers and their spouses and children, 1957–81**

| At end of selected month | Number |  |  |  | Amount (in thousands) |  |  |  |
|---|---|---|---|---|---|---|---|---|
|  | Total | Disabled workers [1] | Wives and husbands [2] | Children [3] | Total | Disabled workers [1] | Wives and husbands [2] | Children [3] |

---

[1] July 1957–October 1960, disabled workers aged 50–64; beginning November 1960, disabled workers under age 65.

[2] Mainly wives under age 65 with entitled children in their care.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] November data; December data not available.

## Table M-13.—OASDI cash benefits: Average amount of monthly benefits, by type of beneficiary, 1940–81

| Period [1] | Retired workers and their spouses and children | | | Survivors of deceased workers | | | | Disabled workers and their spouses and children | | | Persons with special age-72 benefits [9] |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | Retired workers [2] | Wives and husbands [2] [3] | Children [4] | Children [4] | Widowed mothers [5] | Widows and widowers [2] [6] | Parents [2] | Disabled workers [7] | Wives and husbands [8] | Children [4] | |
| | Average benefits in current-payment status at end of period | | | | | | | | | | |
| 1940 | $22.60 | $12.13 | $9.70 | $12.22 | $19.61 | $20.28 | $13.09 | ....... | ....... | ....... | ....... |

---

[1] Some years shown in several parts because of amendments changing the benefit provisions.

[2] Persons aged 65 and over (and aged 62-64, beginning 1956 for women and 1961 for men).

[3] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[4] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18-21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[5] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[6] Includes, beginning September 1965, widows aged 60-61 and entitled surviving divorced wives aged 60 and over; beginning March 1968, disabled widows aged 50-59 and disabled widowers aged 50-61; and, beginning January 1973, nondisabled widowers aged 60-61.

[7] July 1957-October 1960, disabled workers aged 50-64; beginning November 1960, disabled workers under age 65.

[8] Includes wife beneficiaries under age 65 with entitled children in their care, and, beginning September 1965, entitled divorced wives.

[9] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

## Table M-14.—OASDI cash benefits: Estimated number of beneficiaries with monthly benefits in current-payment status, by age group and by type of benefit, 1940–81

[In thousands. Adjusted to exclude duplication arising from dual entitlement: See the **1977–79 Annual Statistical Supplement**, p. 11]

[1] At the end of 1980 an estimated 40,000 Railroad Retirement beneficiaries would have been eligible for Social Security benefits had they applied. These persons receive their Social Security benefits as part of their Railroad Retirement annuity and are not included in the above tabulations. Of these 40,000 beneficiaries, 19,000 were retired workers, 5,500 were disabled workers, and 15,500 were spouses and children.

[2] Includes spouses and children of disabled workers.

[3] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[4] Fewer than 500.

[5] November data; December data not available.

[1] Persons aged 65 and over (and aged 62–64, beginning 1956 for women and 1961 for men).

[2] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[5] Includes, beginning September 1965, widows aged 60–61 and entitled surviving divorced wives, aged 60 and over; beginning March 1968, disabled widows aged 50–59 and disabled widowers aged 50–61; and, beginning January 1973, nondisabled widowers aged 60–61.

[6] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[7] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

[8] The June awards include only those with the new benefit rates.

## Table M-16.—OASDI cash benefits: Number of monthly benefits awarded to retired workers and their spouses, by payment status at time of award, 1950–81

[Number of awards in thousands]

---

[1] Includes awards currently payable and conditional or deferred awards. Conditional or deferred awards are those suspended immediately following determination, chiefly because of earnings of the beneficiary or the worker on whose account benefits are paid; since September 1965 most conditional and deferred awards have been made primarily for the purpose of assuring eligibility for hospital insurance benefits.

[2] Estimated on basis of awards for 10 months.

[3] Data not available.

[4] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

[5] The June awards include only those with the new benefit rates.

---

[1] July 1957–October 1960, disabled workers aged 50–64; beginning November 1960, disabled workers under age 65.

[2] Mainly wives under age 65 with entitled children in their care.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18-21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

[5] The June awards include only those with the new benefit rates.

**Table M-18.**—Supplemental security income for the aged, blind, and disabled: Number of persons receiving federally administered payments and total amount, by reason for eligibility, November 1981

| Reason for eligibility | All persons | Amount of payments (in thousands) | | |
|---|---|---|---|---|
| | | Total | Federal SSI | State supplementation [1] |
| Total | 4,027,072 | $738,246 | $578,486 | $159,760 |
| Aged | 1,686,502 | 233,002 | 170,427 | 62,575 |
| Blind | [2] 78,596 | 18,079 | 13,102 | 4,977 |
| Disabled | [3] 2,261,974 | 487,165 | 394,956 | 92,208 |

[1] Excludes payments for State supplementation under State-administered programs.

[2] Includes approximately 25,000 persons aged 65 and over.

[3] Includes approximately 401,000 persons aged 65 and over.

**Table M-20.**—Supplemental security income for the aged, blind, and disabled: Number of persons initially awarded federally administered payments, by reason for eligibility, 1974–81

| Period | Total | Aged | Blind | Disabled |
|---|---|---|---|---|

---

[1] Represents data for payments to recipients of the specified type of assistance under separate programs and under the combined State adult assistance programs. Superseded by supplemental security income program in the 50 States and the District of Columbia, beginning January 1974.

[2] Beginning September 1965, excludes State blind pension program in Pennsylvania administered under State law without Federal participation.

[3] Includes as recipients the children and 1 or both parents or 1 caretaker relative other than a parent in families in which the requirements of such adults were considered in determining the amount of assistance.

[4] Data incomplete.

[5] Represents average per family. Beginning January 1972, includes New York City.

## Table M-29.—Public assistance: Total money payments, by program and emergency assistance, 1945–80

[In thousands. Data subject to revision.]

| Period | Total [1] | Money payments | | | | | | Emergency assistance payments [4] |
|---|---|---|---|---|---|---|---|---|
| | | Total [2] | Old-age assistance [3] | Aid to the blind [3] | Aid to the permanently and totally disabled [3] | Aid to families with dependent children | General assistance | |

---

[1] Includes money payments for institutional services in intermediate-care facilities for 1968–71.

[2] Includes money payments for medical assistance for the aged for 1960–69.

[3] Superseded by supplemental security income program in the 50 States and the District of Columbia beginning 1974. Data for 1974 and thereafter are for only Guam, Puerto Rico, and the Virgin Islands.

[4] Money payments to families and medical vendor payments to needy families with children, authorized under title IV of the Social Security Act.

## **Table M-30.**—Public assistance: Total medical vendor payments, by program, 1951–78

[Data subject to revision]

| Period | Total amount of payments (in thousands) | | | | |

---

[1] Federal participation in medical vendor payments, beginning October 1950, was authorized by the social security amendments.

[2] Beginning Jan. 1970, medical assistance for the aged and medical vendor payments under the categorical programs were replaced by the medical assistance program. Beginning Jan. 1972, includes payments to intermediate-care facilities formerly listed separately in table M-29.

[3] Data incomplete.

---

[1] Data not reported by some States because (1) programs are administered by townships and local areas and reports are not available, or (2) counties are unable to report on their State-assisted programs, or (3) program has been suspended. New Jersey data includes assistance under the "Insufficient Employment of Parents" program; Maryland data includes a State program of assistance to families with dependent children. In other States the program covers "home relief," "general welfare," "relief," etc.—State and local programs not federally aided.

[2] Data estimated.

[3] Not computed on base of fewer than 100 recipients.

[1] Benefits payable under the "black lung" program established by the Federal Coal Mine Health and Safety Act of 1969. The program is administered by the Social Security Administration but is financed from the general funds of the Treasury.

[2] Includes benefits for dependent wife and/or child.

[3] Includes benefits for dependent child of widow, surviving child, parent, brother, and sister.

## Table M-37.—Unemployment insurance: Selected data on State programs, 1940–81

[Excludes programs for Federal employees and for ex-servicemen; includes unemployment compensation for State and local government employees where covered by State law]

| Period | Average weekly insured employment [1] | | Initial claims (weekly average) [4] | All types of compensated unemployment | | | | Average weekly benefit for total unemployment [6] | Number of claimants exhausting benefits | Funds available for benefits end of period [7] (in thousands) |
|---|---|---|---|---|---|---|---|---|---|---|
| | Number of workers [2] | Percent covered employment [3] | | Number of first payments | Weeks compensated | Benefits paid [5] (in thousands) | Average weekly number of beneficiaries | | | |

[1] Beginning July 1963, includes Puerto Rican sugarcane workers' program.

[2] Workers reporting completion of at least 1 week of unemployment.

[3] Annual rates based on average covered employment in specified year; monthly rates on average for most recent 12-month period.

[4] Notices filed by workers to indicate they are starting periods of unemployment. Excludes transitional claims.

[5] Annual data, but not monthly, adjusted to exclude voided benefit checks and transfers under interstate combined-wage plan. Through 1970, includes payments under State (but not Federal) temporary extended unemployment insurance provisions; beginning 1971, excludes such payments.

[6] Includes dependents' allowances in States that provide such benefits.

[7] Sum of balances in State clearing accounts, benefit-payment accounts, and State accounts in Federal unemployment trust fund.

[8] Data not available.

---

[1] Workers reporting completing at least 1 week of unemployment.

[2] Based on average covered employment for most recent 12-month period.

[3] Notices filed by workers to indicate they are starting periods of unemployment. Excludes transitional claims.

[4] Voided benefit checks and transfers under interstate combined-wage plan not deducted. Excludes payments under temporary unemployment insurance provisions.

[5] Includes dependents in States that provide such benefits.

[6] Includes data under the Puerto Rican sugarcane workers' program for average insured unemployment and initial claims (sugarcane data not available for other items).

---

[1] Monthly data represents amount at annual rate.

[2] Includes payments in kind; includes pay of Federal civilian and military personnel in all areas.

[3] Includes government transfer payments to beneficiaries under OASDHI, railroad retirement, public employee retirement, unemployment insurance, MDTA training allowances, trade adjustment assistance, "black lung," and veterans' pensions and compensation programs; cash and medical payments under workers' compensation and temporary disability insurance; and court-awarded benefits for work injuries sustained by railroad, maritime, and other workers under Federal employer liability acts.

[4] Includes government transfer payments to recipients of direct relief under programs of old-age assistance, aid to families with dependent children, aid to the blind, aid to the permanently and totally disabled, and general assistance. Excludes payments made in behalf of recipient to suppliers of medical care (vendor payments). Beginning 1961, includes bonus value of food stamps. Beginning 1974, includes supplemental security income payments.

[5] Includes proprietors' income, dividends, personal interest, and rental income; other transfer payments not enumerated in footnotes 2 and 3 (such as Government life insurance payments, World War bonus payments, mustering-out pay and terminal-leave benefits to discharged servicemen, subsistence allowances to veterans at school); and employer contribution to private pensions and welfare funds and other labor income (except compensation for injuries).

[6] Includes life insurance premium payments for veterans.

[7] Data revised March 1981.

[1] Includes Alaska and Hawaii for all years. Annual data are estimated as of July 1. Data not adjusted for errors of coverage and of age misreporting.

[2] Annual data are averages of monthly figures. Beginning 1960, includes Alaska and Hawaii. Data for 1950 and 1955 adjusted to reflect definitions adopted January 1957; two groups (those on temporary layoff and those waiting to start new wage and salary jobs within 30 days) formerly classified as employed—with a job, not at work—were assigned to other classifications, chiefly to the unemployed. Beginning 1962, comparability with previous years affected somewhat by the introduction of material from the 1960 Census (level of labor force and employment lowered by about 150,000). Before January 1967, series show aged 14 and over.

Source: Population data from Bureau of the Census, Department of Commerce. Labor-force data from Bureau of Labor Statistics, Department of Labor.

## Table M-41.—Consumer price index for urban and clerical workers, 1940-81 [1]

[1] Beginning January 1978, the Bureau of Labor Statistics introduced a new index for all urban consumers and a revised index for urban wage earners and clerical workers, both of which form a continuous series with the unrevised consumer price index, as of December 1977. For changes in titles of components and in definitions, see Bureau of Labor Statistics, **CPI Detailed Report, January 1978**, pp. 7-8.

[1] Beginning January 1978, the Bureau of Labor Statistics introduced a new index for all urban consumers and a revised index for urban wage earners and clerical workers, both of which form a continuous series with the unrevised consumer price index, as of December 1977. For changes in titles of components and in definitions, see Bureau of Labor Statistics, **CPI Detailed Report, January 1978**, pp. 7–8.

Q-11.—OASDI cash benefits: Number and amount of monthly benefits in current-payment status for wives and mothers with entitlement based on the entitlement of a disabled person to a child's benefit, 1957–78 . . . . . . . . . . 73

Q-12.—OASDI cash benefits: Number of monthly benefits awarded to children, 1940–81 . . . . . . . . . . 73

Q-13.—OASDI cash benefits: Number of monthly benefits being withheld, by reason for withholding payment and by type and age of beneficiary, at end of September 1981 . . . 74

Q-14.—OASDI benefits: Number of monthly benefits in current-payment status, by type of beneficiary and by State, June 1980 . . . . . . . . . . 75

Q-15.—OASDI benefits: Amount of monthly benefits in current-payment status, by type of beneficiary and by State, June 1980 . . . . . . . . . . 76

Q-16.—OASDI benefits: Estimated amount of payments, by type of program and beneficiary and by State, fiscal year 1980 . . . . . . . . . . 77

Q-17.—OASDI cash benefits: Estimated number of families and beneficiaries receiving benefits and average monthly benefit in current-payment status, by family group, at end of December 1977 and 1978 . . . . . . . . . . 78

Q-18.—Hospital insurance: Number of bills approved for payment and amount reimbursed, by type of benefit, type of beneficiary, and period approved, as of April 25, 1981 . . . 79

Q-19.—Hospital insurance: Number of bills for inpatient short-stay hospital care approved for payment, covered days, total charges, and amount reimbursed, by type of beneficiary and period approved, as of April 25, 1981. . . . 80

Q-20.—Medical insurance: Number of reimbursed bills and amount reimbursed, by type of service, type of beneficiary, and period recorded, as of May 30, 1981 . . . . . . . . . . 81

Q-21.—Medical insurance: Number of physicians' bills paid, total charges, and amount reimbursed, by type of bill, type of beneficiary, and period recorded, as of May 30, 1981 . . . . . . . . . . 82

Q-22.—Supplemental security income for the aged, blind, and disabled: Number of persons receiving federally administered payments and average monthly amount, by reason for eligibility and type of payment, September 1981 . . . . . 83

Q-23.—Supplemental security income for the aged, blind, and disabled: Number and percentage distribution of persons receiving federally administered payments by reason for eligibility, sex, and race, June 1981 . . . . . . . . . . 83

Q-24.—Supplemental security income for the aged, blind, and disabled: Number and percentage distribution of persons receiving federally administered payments, by reason for eligibility and living arrangements, June 1981 . . . . . . . . . . 83

Q-25.—Supplemental security income for the aged, blind, and disabled: Number of persons in concurrent receipt of federally administered payments and unearned income other than social security benefits and average monthly unearned income, by reason for eligibility and type of income, June 1981 . . . . . . . . . . 84

Q-26.—Supplemental security income for the aged, blind, and disabled: Number and percentage distribution of adults receiving federally administered payments, by reason for eligibility and age, June 1981 . . . . . . . . . . 84

Q-27.—Supplemental security income for the aged, blind, and disabled: Number of persons receiving federally administered payments, by reason for eligibility and State, September 1981 . . . . . . . . . . 84

Q-28.—Supplemental security income for the aged, blind, and disabled: Number of persons receiving Federal SSI payments, by reason for eligibility and State, September 1981 85

Q-29.—Supplemental security income for the aged, blind, and disabled: Number of persons receiving federally administered State supplementation, by reason for eligibility and State, September 1981 . . . . . . . . . . 86

Q-30.—Supplemental security income for the aged, blind, and disabled: Average monthly amount of combined Federal and State payments in States with federally administered State supplementation, by reason for eligibility and State, September 1981 . . . . . . . . . . 87

Q-31.—Supplemental security income for the aged, blind, and disabled: Average monthly amount of Federal SSI payments, by reason for eligibility and State, September 1981 87

Q-32.—Supplemental security income for the aged, blind, and disabled: Average monthly amount of federally administered State supplementation, by reason for eligibility and State, September 1981 . . . . . . . . . . 88

Q-33.—Supplemental security income for the aged, blind, and disabled: Number of persons receiving federally administered payments and/or State-administered State supplementation, by reason for eligibility and State, September 1981 . . . . . . . . . . 88

Q-34.—Supplemental security income for the aged, blind, and disabled: Number of persons receiving Federal SSI payments in States with State-administered State supplementation, by reason for eligibility and State, September 1981 89

Q-35.—Supplemental security income for the aged, blind, and disabled: Number of persons receiving State-administered State supplementation, by reason for eligibility and State, September 1981 . . . . . . . . . . 90

Q-36.—Supplemental security income for the aged, blind, and disabled: Amount of combined federally administered payments and State-administered State supplementation, by reason for eligibility and State, September 1981 . . . . . . 91

Q-37.—Supplemental security income for the aged, blind, and disabled: Average monthly amount of State-administered State supplementation, by reason for eligibility and State, September 1981 . . . . . . . . . . 91

Q-38.—Black lung benefits to miners and their spouses and children: Number and monthly amount in current-payment status, by State, September 1981 . . . . . . . . . . 92

## Table Q-1.—Estimated payrolls in employment covered by selected social insurance programs in relation to wages and salaries, 1950–78

[Amounts in millions. Except as noted, data are for conterminous U.S. before 1960 and, beginning 1960, includes Alaska and Hawaii]

| Period | Wage and salary disbursements [1] | | | | Payrolls in employment [4] covered by— | | | |
|---|---|---|---|---|---|---|---|---|
| | | | OASDHI [2] | | Railroad retirement and unemployment insurance [5] | | State unemployment insurance [6] | |
| | Total | Civilian | Amount | Percent of total wages and salaries [3] | Amount | Percent of civilian wages and salaries | Amount | Percent of civilian wages and salaries |
| Calendar year: | | | | | | | | |
| 1950 | $147,026 | $141,773 | $109,400 | 74.4 | $5,327 | 3.8 | $102,765 | 72.5 |
| 1955 | 211,669 | 201,488 | 169,400 | 80.0 | 5,801 | 2.9 | 158,439 | 78.6 |
| 1960 | 271,932 | 261,517 | 234,300 | 83.8 | 5,648 | 2.2 | 209,665 | 80.2 |
| 1961 | 279,462 | 268,886 | 238,800 | 85.4 | 5,345 | 2.0 | 214,137 | 79.6 |
| 1962 | 298,043 | 286,787 | 255,700 | 85.8 | 5,381 | 1.9 | 228,549 | 79.7 |
| 1963 | 313,385 | 301,881 | 268,200 | 85.6 | 5,350 | 1.8 | 240,099 | 79.5 |

---

[1] Gross amounts paid in cash and in kind, before deduction of social insurance contributions. Includes pay of Federal personnel (civilian and military) in all areas. Quarterly data estimated by Social Security Administration, not seasonally adjusted.

[2] Excludes earnings of self-employed persons, who have been covered since Jan. 1, 1951. Beginning 1955, annual data include and quarterly data exclude wages and salaries of agricultural labor, reported only on an annual basis; beginning 1957, includes the Armed Forces in all areas. Annual data, but not quarterly data exclude payrolls in territories and possessions estimated at less than 1 percent of total.

[3] Before 1957, represents percent of civilian wages and salaries (Armed Forces covered under 1956 legislation).

[4] Taxable plus estimated nontaxable wages and salaries in employment covered by the program. Represents gross earnings, before deduction of social insurance contributions.

[5] Includes a small amount of taxable wages for Alaska and Hawaii.

[6] Beginning 1955, includes payroll of Federal, State, and local government employees except for the Armed Forces (provided with protection under the Ex-Servicemen's Unemployment Compensation Act of 1958).

[7] Data not available.

Source: Data on wage and salary disbursements from Bureau of Economic Analysis, Department of Commerce; payrolls covered by selected programs from reports of administrative agencies.

**Table Q-2.—OASDI benefits in current-payment status: Number and percent of OASDI beneficiaries in concurrent receipt of federally administered SSI payments, by type of beneficiary, August 1981 [1]**

[1] Data not available for September.

[2] At the end of 1980 an estimated 40,000 Railroad Retirement beneficiaries would have been eligible for Social Security benefits had they applied. These persons receive their Social Security benefits as part of their Railroad Retirement annuity and are not included in the above tabulations. Of these 40,000 beneficiaries, 19,000 were retired workers, 5,500 were disabled workers, and 15,500 were spouses and children.

[3] Excludes 80,668 special age 72 beneficiaries.

[4] Less than .05 percent.

## Table Q-3.—OASDI: Workers, total and taxable earnings, and employers reporting taxable wages, 1940-77

| Period | Workers (in thousands) | | | Earnings | | | | | Employers reporting taxable wages (in thousands) |
|---|---|---|---|---|---|---|---|---|---|
| | | Reported with taxable earnings [1] | | | Reported taxable [1] | | Average per worker | | |
| | Total, in covered employment | Total | Reported reaching maximum earnings | Total, in covered employment [2] (in millions) | Amount (in millions) | Percent of total | Total, in covered employment | Reported taxable | |
| | All reported employment [3] | | | | | | | | |
| 1940 | 35,390 | 35,390 | 1,191 | $35,700 | $32,970 | 92.4 | $1,009 | $932 | 2,500 |
| 1945 | 46,390 | 46,390 | 6,361 | 71,600 | 62,950 | 87.9 | 1,543 | 1,357 | 2,610 |
| 1950 | 48,280 | 48,280 | 13,936 | 109,800 | 87,500 | 79.7 | 2,274 | 1,812 | 3,550 |

[1] Taxable earnings includes wages and salaries on which employer taxes or contributions are based. The taxable limit was $3,000 in annual wages from each employer for years through 1950; $4,200 in annual wages or self-employment earnings in 1955; $4,800 during 1960-65; $6,600 during 1966-67; $7,800 during 1968-71; $9,000 in 1972, $10,800 in 1973, $13,200 in 1974, $14,100 in 1975, $15,300 in 1976 and $16,500 in 1977.

[2] Total wages through 1950, and total earnings beginning 1955; including estimated amounts above the taxable maximum.

[3] Beginning 1955, workers and earnings include self-employment.

[4] Preliminary data.

[5] Quarterly data not available for self-employment and agricultural employment. Total workers in covered employment includes estimated number of workers not reported because they had reached the taxable limit in an earlier quarter of the year.

[1] For 1940-73, data refers to old-age assistance program. Beginning January 1974, the supplemental security income program superseded the old-age assistance program in the 50 States and the District of Columbia.

[2] Population data, on which ratio is based, furnished by the Bureau of the Census. Data not adjusted for errors of coverage and of age misreporting.

[3] June data.

[4] February data.

[5] December data.

[6] Revised.

**Table Q-5.—OASDI cash benefits: Number and average amount of retired worker benefits in current-payment status with and without reduction for early retirement, by sex, 1956–81**

| At end of selected month | Beneficiaries | | | | Average monthly benefits | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | Total number | Without reduction for early retirement | With reduction for early retirement | | All benefits | Without reduction for early retirement | With reduction for early retirement | | |
| | | | Number | Percent of total | | | Before reduction[1] | After reduction | Percent reduction |
| | Total | | | | | | | | |
| December: | | | | | | | | | |
| 1961 | 8,924,849 | 7,468,585 | 1,456,264 | 16.3 | $75.65 | $78.81 | $67.92 | $59.42 | 12.5 |

[1] Not currently payable awards are conditional and deferred awards suspended immediately following determination, chiefly because of earnings of the retired worker. Since September 1965, most not currently payable awards have been made primarily for the purpose of assuring eligibility for hospital insurance benefits.

[2] Conversions are awards of retired-worker benefits to disabled-worker beneficiaries on attainment of age 65; transitionally insured awards are those made to persons aged 72 and over with 3-5 quarters of coverage.

[3] Excludes disability conversions and transitionally insured as well as not currently payable awards.

[4] The average amounts shown are based on monthly averages for September-December 1972 and reflect the benefit increases authorized by the 1972 Amendments to the Social Security Act.

[5] Benefit amounts awarded prior to June are included in the computation of the average after being converted to June rates.

[6] Data not available.

[7] The average amounts shown are based on monthly averages for March-December 1968 and reflect the benefit increases authorized by the 1967 Amendments to the Social Security Act.

[1] Beginning June 1975, includes fathers with entitled children in their care.

[2] Includes surviving divorced wives and disabled widows.

[3] Includes disabled widowers. Dependency requirement for eligibility to benefits was eliminated in March 1977.

[4] Less than $500.

## Table Q-11.—OASDI cash benefits: Number and amount of monthly benefits in current-payment status for wives and mothers with entitlement based on the entitlement of a disabled person to a child's benefit, 1957–78

| At end of selected month | Number | | | | Amount (in thousands) | | | |
|---|---|---|---|---|---|---|---|---|
| | Wives of— | | | Widowed mothers [1] | Wives of— | | | Widowed mothers [1] |

---

[1] Beneficiary by State of residence.

[2] At the end of 1980 an estimated 40,000 Railroad Retirement beneficiaries would have been eligible for Social Security benefits had they applied. These persons receive their Social Security benefits as part of their Railroad Retirement annuity and are not included in the above tabulations. Of these 40,000 beneficiaries, 19,000 were retired workers, 5,500 were disabled workers, and 15,500 were spouses and children.

[3] Aged 62 and over.

[4] Under age 65.

[5] Includes wife beneficiaries aged 62 and over, nondivorced and divorced, and those under age 65 with entitled children in their care.

[6] Includes disabled persons aged 18 and over whose disability began before age 22 and entitled full-time students aged 18–21.

[7] Includes surviving divorced mothers and fathers with entitled children in their care.

[8] Aged 60 and over for widows, widowers, and surviving divorced wives, and aged 62 and over for parents. Also includes disabled widows, widowers, and surviving divorced wives aged 50–59.

**Table Q-15.—OASDI benefits: Amount of monthly benefits in current-payment status, by type of beneficiary and by State, at end of June 1980**

[In thousands]

| State [1] | Total | Retired workers [2] | Disabled workers | Wives and husbands [3] of— | | Children [4] of— | | | Widowed mothers and fathers [5] | Widows and widowers [6] | Parents | Special age-72 beneficiaries |

[1] Beneficiary by State of residence.

[2] Aged 62 and over.

[3] Includes wife beneficiaries aged 62 and over, nondivorced and divorced, and those under age 65 with entitled children in their care.

[4] Includes disabled persons aged 18 and over whose disability began before age 22 and entitled full-time students aged 18-21.

[5] Includes surviving divorced mothers and fathers with entitled children in their care.

[6] Aged 60 and over for widows, widowers, and surviving divorced wives, and aged 62, and over for parents. Also includes disabled widows, widowers, and surviving divorced wives aged 50-59.

## Table Q-16.—OASDI benefits: Estimated amount of payments, by type of program and beneficiary and by State, fiscal year 1980

[In thousands]

| State [1] | Total [2] | OASI | | | | DI | | |
|---|---|---|---|---|---|---|---|---|
| | | Total | Retired workers | Spouses and children | Survivors [3] | Total | Disabled workers | Spouses and children |
| Total | $115,485,568 | $100,465,628 | $67,275,978 | $7,237,289 | $25,952,361 | $14,898,923 | $12,355,007 | $2,543,916 |

[1] Beneficiary by State of residence.

[2] Includes special age-72 payments.

[3] Children, widows and widowers, widowed mothers and fathers, and parents.

## Table Q-17.—OASDI cash benefits: Estimated number of families and beneficiaries receiving benefits and average monthly benefit in current-payment status, by family group, at end of December 1977 and 1978

| Family classification of beneficiaries | December 31, 1977 | | | December 31, 1978 | | |
|---|---|---|---|---|---|---|
| | Number of families (in thousands) [1] | Number of beneficiaries (in thousands) | Average monthly amount per family | Number of families (in thousands) [1] | Number of beneficiaries (in thousands) | Average monthly amount per family |
| Total | 26,524 | 34,110 | $271.20 | 27,161 | 34,598 | $310.40 |
| Retired-worker families | 17,824 | 21,493 | 267.70 | 18,361 | 21,999 | 315.20 |
| Worker only | 14,597 | 14,597 | 236.80 | 15,148 | 15,148 | 256.60 |
| Male | 6,564 | 6,564 | 265.90 | 6,791 | 6,791 | 288.90 |
| Full benefit | 3,035 | 3,035 | 290.70 | 3,044 | 3,044 | 316.90 |
| Reduced benefit | 3,528 | 3,528 | 244.60 | 3,747 | 3,747 | 266.10 |
| Female | 8,033 | 8,033 | 213.10 | 8,357 | 8,357 | 230.30 |

| Worker and children | 269 | 596 | 397.40 | 237 | 525 | 433.80 |
| Worker, wife and children | 244 | 873 | 468.00 | 241 | 856 | 510.50 |
| Wife entitlement not dependent on children | 50 | 157 | 491.90 | 52 | 161 | 533.50 |
| Wife entitlement dependent on children | 194 | 717 | 461.90 | 189 | 694 | 504.20 |
| Survivor families | 5,703 | 7,598 | 262.10 | 5,786 | 7,596 | 280.90 |
| Widow or widower only | 3,966 | 3,969 | 224.50 | 4,064 | 4,068 | 241.40 |
| Full benefit | 1,837 | 1,840 | 234.40 | 1,839 | 1,843 | 253.70 |
| Reduced widow benefit | 1,984 | 1,984 | 219.30 | 2,074 | 2,074 | 234.80 |
| Surviving divorced wife | 25 | 25 | 236.80 | 28 | 28 | 253.50 |
| Disabled widow or widower | 120 | 120 | 156.10 | 123 | 123 | 165.80 |
| Remarried widows | 69 | 69 | 134.20 | 72 | 72 | 143.50 |
| Widow or widower and children | 81 | 168 | 391.10 | 82 | 170 | 422.70 |
| Mother and children | 579 | 1,832 | 502.40 | 572 | 1,783 | 542.30 |
| 1 child | 221 | 449 | 436.80 | 228 | 466 | 474.10 |
| 2 children | 190 | 580 | 546.60 | 186 | 566 | 591.90 |
| 3 children or more | 167 | 803 | 538.60 | 158 | 751 | 582.80 |
| Children only | 990 | 1,539 | 271.70 | 979 | 1,486 | 291.00 |
| 1 child | 641 | 641 | 191.00 | 650 | 650 | 206.70 |
| 2 children | 216 | 433 | 390.00 | 209 | 417 | 428.90 |
| 3 children | 83 | 250 | 474.20 | 78 | 234 | 512.50 |
| 4 children or more | 49 | 215 | 457.80 | 42 | 184 | 498.50 |
| Parents with or without children | 18 | 19 | 210.90 | 16 | 17 | 228.60 |
| Disabled-worker families | 2,840 | 4,860 | 322.30 | 2,882 | 4,869 | 349.00 |
| Worker only | 2,004 | 2,004 | 256.50 | 2,043 | 2,043 | 277.90 |
| Male | 1,222 | 1,222 | 283.80 | 1,245 | 1,245 | 308.50 |
| Female | 782 | 782 | 213.80 | 798 | 798 | 230.20 |
| Worker and spouse | 80 | 159 | 407.50 | 81 | 162 | 443.00 |
| Worker and children | 341 | 919 | 432.00 | 348 | 928 | 472.60 |
| Worker, wife and children | 415 | 1,778 | 533.60 | 411 | 1,736 | 579.20 |
| Special age-72 beneficiaries | 157 | 159 | 78.80 | 132 | 134 | 83.90 |

[1] For a small number of retired-worker and disabled-worker families, the number of families exceeds the number of workers where the worker's benefit was not in current-payment status for some temporarily technical reason but some family members were still receiving their benefit.

**Table Q-18.—Medicare hospital insurance: Number of bills approved for payment and amount reimbursed, by type of benefit, type of beneficiary and period approved, as of April 25, 1981** [1]

[In thousands]

[1] Includes only those bills recorded in the Social Security Administration central records before Apr. 25, 1981. A bill does not necessarily represent a total stay in a covered facility or a complete series of visits covered under an established home health plan. Usually, more than one bill is submitted for each stay in a long-term hospital, or in a skilled nursing facility and for visits under a home health plan. Because of lags in bill processing by intermediaries and the Social Security Administration, data for recent time periods are incomplete; comparison of most recent periods with similar periods in earlier years are, therefore, not valid.

[2] Period in which the intermediary approved bills for payment.

[3] Included in total, but not shown separately, are bills for outpatient diagnostic services approved for payment under the hospital insurance program.

[4] Actual benefit payments as represented in trust fund transactions differ from amounts reimbursed as shown above, which represent payments for covered services based on an interim rate (either per diem or a percent of total charges) and adjusted at the end of each provider's operating year on the basis of audited reasonable costs of operation. Payments exclude deductibles and coinsurance amounts and noncovered services as specified by law.

[5] Includes data for services rendered to beneficiaries aged 65 and over, and the new group of beneficiaries, who became entitled to hospital insurance benefits on or after July 1, 1973, (effective date for this provision of the 1972 amendments). The new group includes persons entitled to Medicare because they meet the disability provisions of the Social Security Act and those entitled solely because of chronic renal disease.

[6] Includes a relatively small number of persons aged 65 and over entitled to hospital insurance benefits solely because of chronic renal disease.

[7] Includes a relatively small number of persons under age 65 entitled to hospital insurance benefits solely because of chronic renal disease.

**Table Q-19.**—Medicare hospital insurance: Number of bills for inpatient short-stay hospital[1] care approved for payment, covered days, total charges and amount reimbursed, by type of beneficiary and period approved, as of April 25, 1981[2]

| Period approved[3] | Approved bills | | | Hospital charges | | | | |
|---|---|---|---|---|---|---|---|---|
| | | Covered days of care | | | | | Amount reimbursed[4] | |

|  | Disability beneficiaries [8] |  |  |  |  |  |  |  |  |  |  |  |
| 1980 | 17,830 | $1,682,350 | 12,344 | $837,475 | 3,263 | $414,561 | 609 | $12,266 | 93 | $16,149 | 1,353 | $375,417 |
| Jan. 1-May 30, 1981 | 7,780 | 778,321 | 5,407 | 398,835 | 1,303 | 176,973 | 261 | 5,612 | 37 | 6,898 | 684 | 176,300 |

[1] Includes only those bills for which reimbursements were made by carriers or intermediaries and that were recorded in the Social Security Administration central records before May 30, 1981.

[2] Determined by summarization date of administrative records. If days from more than 1 month are included in period summarized, data are prorated by month according to the number of calendar days represented in each month.

[3] Includes in total, but not shown separately, are data for which type of service is unknown.

[4] Amount reimbursed to or in behalf of the beneficiary—generally 80 percent of the allowed charges, once the beneficiary has satisfied the $60 deductible in the current year (before Jan. 1, 1973, the deductible was $50). Some radiology and pathology services are reimbursed at 100-percent rate, regardless of the beneficiary's deductible status. Beginning calendar year 1973, home health services provided under the supplementary medical insurance program are reimbursed at 100 percent of the reasonable cost less any applicable deductible.

[5] Includes bills for (a) ancillary and other miscellaneous SMI services provided by hospitals, skilled-nursing facilities, and home health agencies; (b) chronic renal dialysis services furnished by limited care facilities; (c) hospital based physicians' services with charges calculated on a per diem rate; and (d) supplier (other than independent laboratory) services.

[6] Includes data for services rendered to beneficiaries aged 65 and over, the new group of beneficiaries who became entitled to supplementary medical insurance on or after July 1, 1973 (effective date for this provision of the 1972 amendments). The new group includes persons entitled to Medicare because they meet the disability provisions of the Social Security Act and those entitled solely because of chronic renal disease.

[7] Includes a relatively small number of persons aged 65 and over entitled to supplementary medical insurance benefits solely because of chronic renal disease.

[8] Includes a relatively small number of persons under age 65 entitled to supplementary medical insurance benefits solely because of chronic renal disease.

**Table Q-21.**—Medicare supplementary medical insurance: Number of physicians' bills paid, total charges, and amount reimbursed, by type of bill, type of beneficiary, and period recorded, as of May 30, 1981 [1]

[In thousands, except percents]

| Calendar year recorded [2] | Total physicians' bills | | | | Surgical bills | | | | Medical bills | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | Amount reimbursed [4] | | | | Amount reimbursed [4] | | | | Amount reimbursed [4] | |

| Jan. 1–May 30, 1981 | 50,806 | 4,615,417 | 3,574,834 | 77.5 | 6,216 | 1,871,847 | 1,466,515 | 78.3 | 44,588 | 2,743,569 | 2,108,319 | 76.8 |
| | Persons aged 65 and over [6] | | | | | | | | | | | |
| 1980 | 105,143 | $8,645,961 | $6,724,177 | 77.8 | 13,033 | $3,527,380 | $2,769,036 | 78.5 | 92,011 | $5,118,581 | $3,955,132 | 77.3 |
| Jan. 1–May 30, 1981 | 45,399 | 4,105,008 | 3,175,999 | 77.4 | 5,638 | 1,680,625 | 1,315,981 | 78.3 | 39,760 | 2,424,383 | 1,860,018 | 76.7 |
| | Disability beneficiaries [7] | | | | | | | | | | | |
| 1980 | 12,344 | $1,065,988 | $837,475 | 78.6 | 1,309 | $397,661 | $313,714 | 78.9 | 11,035 | $668,328 | $523,741 | 78.4 |
| Jan. 1–May 30, 1981 | 5,407 | 510,409 | 398,835 | 78.1 | 578 | 191,222 | 150,534 | 78.7 | 4,828 | 319,186 | 248,301 | 77.8 |

[1] Includes only those bills for which reimbursements were made by carriers and that were recorded in the Social Security Administration central records before May 30, 1981.

[2] Determined by summarization date of administrative records. If days from more than 1 month are included in period summarized, data are prorated by month according to the number of calendar days represented in each month.

[3] Represents allowed charges as determined by the carriers on the basis of customary charges for similar services generally made by the physician or supplier of covered services and also on prevailing charges in the locality for similar services.

[4] Amount reimbursed to or in behalf of the beneficiary—generally 80 percent of the allowed charges, once the beneficiary has satisfied the $60 deductible in the current year (before Jan. 1, 1973, the deductible was $50). Some radiology and pathology services are reimbursed at 100-percent rate, regardless of the beneficiary's deductible status. Beginning calendar year 1973, home health services provided under the supplementary medical insurance program are reimbursed at 100 percent of the reasonable cost less any applicable deductible.

[5] Includes data for services rendered to beneficiaries aged 65 and over, the new group of beneficiaries who became entitled to supplementary medical insurance on or after July 1, 1973 (effective date for this provision of the 1972 amendments). The new group includes persons entitled to Medicare because they meet the disability provisions of the Social Security Act and those entitled solely because of chronic renal disease.

[6] Includes a relatively small number of persons aged 65 and over entitled to supplementary medical insurance benefits solely because of chronic renal disease.

[7] Includes a relatively small number of persons under age 65 entitled to supplementary medical insurance benefits solely because of chronic renal disease.

## SSI Quarterly Data

Tables Q-22-32 present data on the number of persons who received federally administered supplemental security income (SSI) payments at the end of the quarter and the average monthly amount of these payments. Those receiving Federal SSI payments and/or federally administered State supplementary payments are included. Emergency advance payments are not included; adjustments have not been made for overpayment refunds, returned checks, and special disbursements for underpayments. The data in the tables are estimated on the basis of the figures for the last month of the quarter.

Tables Q-33-37 present data on the number of persons who received Federal SSI payments and/or State-administered State supplementary payments in States with State-administered State supplementation programs. The data reported represent figures for the last month of the quarter.

**Table Q-22.**—Supplemental security income for the aged, blind, and disabled: Number of persons receiving federally administered payments and average monthly amount by reason for eligibility and type of payment, September 1981

| Type of payment | Total | Aged | Blind | Disabled |
|---|---|---|---|---|
| | Number of persons | | | |
| Total | 4,037,881 | 1,701,964 | [1] 78,371 | [2] 2,257,546 |
| Federal SSI payments [3] | 3,611,744 | 1,454,426 | 69,086 | 2,088,232 |
| Federal SSI payments only | 2,411,036 | 1,048,103 | 42,176 | 1,320,757 |
| Federal SSI and State supplementation | 1,200,708 | 406,323 | 26,910 | 767,475 |
| State supplementation [4] | 1,626,845 | 653,861 | 36,195 | 936,789 |
| State supplementation only | 426,137 | 247,538 | 9,285 | 169,314 |
| | Amount of payments (in thousands) | | | |
| Total | $736,244 | $233,615 | $17,951 | $484,678 |
| Federal SSI payments | 580,048 | 172,460 | 13,048 | 394,541 |
| State supplementation | 156,195 | 61,156 | 4,903 | 90,137 |
| | Average monthly amount | | | |
| Total | $182.33 | $137.26 | $229.05 | $214.69 |
| Federal SSI payments | 160.60 | 118.57 | 188.86 | 188.93 |
| State supplementation | 96.01 | 93.53 | 135.46 | 96.21 |

[1] Includes approximately 25,000 persons aged 65 and over.

[2] Included approximately 401,000 persons aged 65 and over.

[3] Includes persons with Federal SSI payments only, and Federal SSI and federally administered State supplementation, data partly estimated.

[4] Includes persons with federally administered State supplementation only, and Federal SSI and federally administered State supplementation, data partly estimated.

**Table Q-23.**—Supplemental security income for the aged, blind, and disabled: Number and percentage distribution of persons receiving federally administered payments, by reason for eligibility, race, and sex, June 1981

| Race and sex | Total | Aged | Blind | Disabled |
|---|---|---|---|---|
| Total number | 4,098,895 | 1,753,213 | 78,511 | 2,267,171 |
| Total percent | 100.0 | 100.0 | 100.0 | 100.0 |

---

[1] Partly estimated.

[2] Includes all persons with Federal SSI payments whether receiving Federal payments only or both Federal SSI and federally administered State supplementary payments.

[3] Includes persons eligible for both Federal SSI payments and Federally administered State supplementation.

[4] Includes all persons eligible for Federal SSI payments in the 50 States and the District of Columbia.

[5] The number of persons receiving Federal SSI payments in States without federally administered State supplementation is shown in table Q-27.

☆U.S. GOVERNMENT PRINTING OFFICE: 1982-361-182:121

[1] Includes data not distributed by reason for eligibility.

[2] Represents March 1980 data for Alaska, May 1981 data for Minnesota and July 1981 data for Oklahoma; data not available for September 1981.

[3] Data not available.

[4] Includes data for the blind.

## Table Q-36.—Supplemental security income for the aged, blind, and disabled: Amount of combined federally administered payments and State-administered State supplementation, by reason for eligibility and State, September 1981

[In thousands]

| State | Total | Aged | Blind | Disabled |
|---|---|---|---|---|
| Total [1] | [2] $219,723 | $73,280 | $4,661 | $141,642 |
| Alabama | 20,026 | 8,894 | 371 | 10,761 |
| Alaska [3] | 669 | 212 | 13 | 444 |
| Arizona | 5,356 | 1,575 | 121 | 3,660 |
| Colorado | 7,185 | 3,433 | 68 | 3,685 |
| Connecticut | 5,700 | 1,605 | 84 | 4,011 |
| Florida [1] | 30,184 | 12,640 | 551 | 16,993 |
| Idaho | 1,417 | 344 | 23 | 1,051 |
| Illinois | 23,250 | 4,468 | 385 | 18,397 |
| Kentucky | 16,076 | 5,133 | 446 | 10,497 |
| Maryland [1] | [2] 8,244 | 1,720 | 132 | 6,329 |
| Minnesota [3] | 5,124 | 1,412 | 119 | 3,593 |
| Missouri | 13,284 | 4,703 | 357 | 8,224 |
| Nebraska | 2,374 | 574 | 47 | 1,753 |
| New Hampshire | 1,244 | 251 | 37 | 956 |
| New Mexico | [2] 4,111 | 1,189 | 89 | 2,812 |
| North Carolina | 22,716 | 7,795 | 621 | 14,300 |
| North Dakota | 847 | 299 | 15 | 533 |
| Oklahoma [3] | 12,826 | 5,877 | 225 | 6,725 |
| Oregon | 4,011 | 958 | 122 | 2,932 |
| South Carolina | 12,464 | 4,047 | 371 | 8,046 |
| South Dakota [1] | 1,117 | 377 | 28 | 712 |
| Utah | [2] 1,224 | 279 | 29 | 860 |
| Virginia | 12,823 | 3,888 | 268 | 8,667 |
| West Virginia | 7,185 | 1,540 | 133 | 5,512 |
| Wyoming | 264 | 68 | 7 | 189 |

[1] Includes federally administered mandatory supplementary payments totaling $22,000 for three States: $1,000 for Florida, $17,000 for Maryland, and $4,000 for South Dakota.

[2] Includes State-administered optional supplementary payments for three States totaling $140,000 not distributed by reason for eligibility: $63,000 for Maryland, $21,000 for New Mexico, and $56,000 for Utah.

[3] Includes March 1980 State-administered supplementary payments for Alaska, May 1981 data for Minnesota, and July 1981 data for Oklahoma; data not available for September 1981.

## Table Q-37.—Supplemental security income for the aged, blind, and disabled: Average monthly amount of State-administered State supplementation, by reason for eligibility and State, September 1981

[1] Benefits payable under the Black Lung program established by the Federal Coal Mine Health and Safety Act of 1969. The program is administered by the Social Security Administration but is financed from the general funds of the Treasury.

# Now Available:
# Annual Statistical Supplement To Social Security Bulletin

The **Supplement** is now available on an individual copy basis ( **$5.50** domestic and $**6.90** foreign) or as part of subscribing to the monthly **Bulletin** ( **$22.00** yearly U.S., and $**27.50** all other countries). The 1980 **Supplement** contains a host of data and research on such topics as:

- *Social Security and the Economy
- *Poverty
- *Interprogram Social Security
- *Old-Age, Survivors, Disability, and Health Insurance
- *Black Lung Benefits
- *Public Assistance

For the first time, an extensive index to OASDI tables has been added to the **Supplement.** Order your copy (on the form below) from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

## SSA Computer Modernization Program

Over the next 5 years, the Social Security Administration will allocate $479 million in administrative funds to modernize its data processing system, once one of the best in the country but now outmoded because of technological inadequacies and the pressures of an expanding workload. Announcement of the effort was made on March 2 by Richard S. Schweiker, Secretary of Health and Human Services, and John A. Svahn, Commissioner of Social Security.

"Serious problems have existed within SSA's computer operations as a result of long-standing deficiencies which, if not corrected, could result in a disaster that would affect millions of our most economically vulnerable citizens," Secretary Schweiker said.

"We have reached the point where we cannot afford to delay modernization efforts any longer," Commissioner Svahn added. "We are now only marginally capable of performing critical program functions and continue to fall behind in processing existing workloads.

"The people who are running the system and who will be running it through the transition are performing a daily miracle enabling us to get the Social Security checks out each month," the Commissioner observed. "This is one of the largest systems in the world, serving 36 million beneficiaries and 115 million workers paying into Social Security, and it's got to be one of the best."

Records currently are maintained on 240 million workers, 36 million Social Security beneficiaries, and 4.1 million Supplemental Security Income recipients. In addition, SSA annually processes about 380 million wage reports from employers, 19 million post-adjudicative transactions, 120 million health insurance bills and queries, 7.5 million new claims applications, and 10 million requests for Social Security cards.

The plan to overhaul the Social Security computer system takes into account the concerns of congressional committees, the General Accounting Office, the General Services Administration, the Office of Management and Budget, and the Department of Health and Human Services.

Most of the plan's cost is for improving and reengineering software components in the system and for replacing antiquated hardware. More than half the total had already been budgeted by SSA for data processing improvements. Significant savings and avoided costs are expected as a result of implementing the plan.

## Tax Refund Offset Program

Regulations for deducting delinquent support payments from Federal income tax refunds owed to absent parents of children receiving cash assistance through Aid to Families With Dependent Children (AFDC) were issued on February 19 by the Department of Health and Human Services (HHS). The new collection effort, which is an expanded version of a program established last October under the Omnibus Budget Reconciliation Act of 1981, is jointly implemented by the Internal Revenue Service (IRS) and the Office of Child Support Enforcement (OCSE). The Commissioner of Social Security, John A. Svahn, also serves as OCSE director.

"It is outrageous that parents should get away with abandoning their responsibility to their children and shifting the costs to the taxpayers," HHS Secretary Richard S. Schweiker said in announcing the regulations. "The Tax Refund Offset program will give us an important new tool to assure that parents fulfill their clear obligation to provide support." It is expected that the effort will lead to savings of millions of Federal and State welfare dollars.

The program provides, for example, that a parent expecting a $400 Federal income tax refund but who has been delinquent by more than 3 months and owes support payments totaling $300 would receive a refund of only $100. Forty-seven States and the District of Columbia have submitted 550,000 cases for forwarding to IRS since the program went into effect.

The regulations require that State Child Support Enforcement agencies submit a listing of parents delinquent in support payments by the beginning of each fiscal year so that it can be sent to IRS for potential tax offset. Delinquent parents due a tax refund are subject to the offset and are so notified by IRS.

The statute providing for the program requires that the relevant support obligations be imposed by a court or through an administrative process sanctioned by State law. The regulations also require that arrearages be at least 3 months old and amount to not less than $150. Many States are also using the process of offsetting delinquent support payments against State income tax refunds.

Since its inception, OCSE has collected $3.05 billion on behalf of AFDC families and $3.99 billion for non-AFDC families. The program has also located 3 million absent parents and established paternity for 650,000 children. The Department of HHS provides 75-percent funding, technical assistance, and a variety of services to State and local agencies carrying out the effort.

# Program Operations

## OASDI Benefits

At the end of December 1981, the Old-Age, Survivors, and Disability Insurance (OASDI) program was paying $12.3 billion in monthly cash benefits to 36,006,371 beneficiaries—an increase of $1.6 billion in total monthly benefits payable and 388,000 in the number of beneficiaries since December 1980. The OASI program accounted for 94 percent of the rise in the amount of monthly benefits and 100 percent of the increase in the number of beneficiaries. Retired workers numbered 20,195,362, or 56 percent of all OASDI beneficiaries.

During the 12-month period ended December 1981, the monthly amount of OASI and DI benefits rose 16 percent and 7 percent, respectively. The number of OASI beneficiaries increased 2 percent, while the number of DI beneficiaries decreased 5 percent.

Average monthly benefit amounts payable in December 1981 to retired and disabled workers were $385.97 and $413.15, respectively. A year earlier, average benefits were $341.41 for retired workers and $370.74 for disabled workers.

The number of monthly cash benefits awarded in December 1981 reached 294,532. Eighty-eight percent of all awards and 85 percent of awards to retired workers were immediately payable. The average monthly benefit amounts for currently payable awards were $362.21 for retired workers and $419.50 for disabled workers.

| OASDI | December 1981 | November 1981 | December 1980 |
|---|---|---|---|
| **Monthly beneficiaries, total** (in thousands) | 36,006 | 35,968 | 35,619 |
| Aged 65 and over, total | 24,438 | 24,350 | 23,843 |
| Retired workers | 18,081 | 18,006 | 17,565 |
| Survivors and dependents | 6,281 | 6,267 | 6,185 |
| Special age-72 beneficiaries | 76 | 77 | 93 |
| Under age 65, total | 11,568 | 11,618 | 11,776 |
| Retired workers | 2,115 | 2,114 | 2,017 |
| Disabled workers | 2,776 | 2,787 | 2,861 |
| Survivors and dependents | 6,677 | 6,717 | 6,898 |
| **Total monthly benefits** (in millions) [1] | $12,255 | $12,223 | $10,694 |
| **Average benefit in current-payment status:** | | | |
| Retired workers | $385.97 | $385.51 | $341.41 |

| Children of deceased workers | 266.48 | 265.85 | 235.84 |

[1] In current-payment status; excludes lump-sum and retroactive payments and adjustments.

## SSI Payments

**Federally administered payments.** In December 1981, 4,018,900 persons received federally administered Supplemental Security Income (SSI) payments, a decline of 123,000 from the December 1980 total. This decrease was centered in the aged caseload, which fell by 129,700 to 1,678,100. The number of disabled recipients rose by 6,400 to 2,262,200, and the number of blind by 200 to 78,600. The total number of recipients over age 65 for December 1981 was 2,111,000, and of these 1,678,100 were classified as aged, 409,000 as disabled, and 24,000 as blind.

Among individual States, all but two experienced a drop in their total SSI caseload over the 12-month period. While aged recipients declined in every State, the number of disabled and blind rose in 35 and 26 States, respectively.

Federally administered payments totaled $734.4 million in December, up $39.5 million from the previous December. Federal SSI payments rose by $47.6 million to $575.5 million, and federally administered State supplementation dropped by $8.1 million to $158.9 million.

**State-administered supplementary payments.** During October 1981, 249,870 persons received State-administered supplementary payments. This number remained below 250,000 for the second consecutive month. Total expenditures for State supplements amounted to $19.3 million—relatively unchanged from the September level.

# Aid to Families With Dependent Children: Characteristics of Recipients in 1979

by Henrietta J. Duvall, Karen W. Goudreau, and Robert E. Marsh*

In March 1979, 10.4 million persons were receiving Aid to Families With Dependent Children (AFDC). Nearly 70 percent of these recipients were children and most of the remainder were mothers. At that time, most AFDC families had only one or two children, were headed by women, and lived in a metropolitan area. Comparison with earlier surveys reveals that the number of children and other recipients per household has been declining in recent years, that the proportion of blacks on the rolls has diminished slightly, and that AFDC parents are younger and better educated than they used to be.

In the Aid to Families with Dependent Children (AFDC) program, Federal grants help defray State expenses incurred in providing financial assistance to needy children living in the home of a parent or specified relative, and deprived of parental support or care because of the death, continued absence from the home, or physical or mental incapacity of a parent. In about half the States, the program also covers children deprived of support because of their father's unemployment.

Under the AFDC program, States are responsible for defining need or establishing need standards. All States now provide payments for eligible children, and all States except Mississippi provide payments for one parent or other caretaker relative with whom a child is living. Virtually all the States include the second parent in the home if one parent of at least one of the children is incapacitated. About half the States assist families where the primary wage earner is unemployed. The amount of the payments is left to the discretion of the States.

In March 1979, about 10,358,000 persons were receiving AFDC. As chart 1 shows, the number of families assisted by this program doubled between 1959 and 1969—from 773,000 to 1,630,000—then doubled again in just 8 years, to 3,523,000 in 1977. From 1977 to 1979 the number of recipient families dropped by nearly 100,000, to 3,428,000, but after 1979, the number of recipients increased again. By September 1981, there were 11.1 million recipients in 3.8 million families receiving more than $1.1 billion in monthly payments. Another decline in the number of recipients is likely in the future because of provisions incorporated in the Omnibus Budget Reconciliation Act of 1981. That legislation reduced the number of families potentially eligible for AFDC by eliminating coverage for children over age 17 (age 18 under certain circumstances), families in which the parent or caretaker relative is involved in a labor strike, and unborn children until 3 months before birth. Program changes also reduced the amount of earned income that can be disregarded in determining the amount of assistance, called for retrospective accounting of income, and standardized deductions for employment expenses and child care.

From time to time, detailed surveys are made of the characteristics of AFDC recipients. This article reports some of the findings of the most recent of these, conducted in March 1979. The data were derived from a sample survey that included all States and United States jurisdictions except Guam. The sample required from each State was 0.4 percent, but smaller States had the option of selecting a sample of about 400 cases so that reliable data could be presented for them. The sample data are inflated to represent all families receiving money payments during the survey month. Therefore, the data are subject to sampling variability and, as in all surveys, the figures are subject to errors of response.

In general, the article follows the outline of, and draws much of its data from, **Aid to Families with Dependent Children: 1979 Recipient Characteristics Study**, a two-part report to be released soon by the Office of Research and Statistics. The larger report contains detailed tables and distributions by State and region.

Highlights of this article include:

---

* Duvall is with the Division of Family Assistance Studies (FAS), Office of Research and Statistics, Office of Policy, Social Security Administration; Goudreau, formerly with FAS, is now a member of the ORS Division of Supplemental Security Studies; and Marsh is a member of the ORS Publications Staff.

—The average size of AFDC families has been decreasing for a decade. In 1979, the average number of children in AFDC families was not much different from that for families with children in the population as a whole.

—In 1979, more than half of all AFDC families were white, including Hispanics. The proportion of blacks on the rolls fell between 1973 and 1979.

—The median age of parents living in the home has fallen sharply in recent years. At the same time, their educational level has risen substantially.

—The vast majority of AFDC parents are native-born Americans.

## Demographic and Program Characteristics

### AFDC Families

**Child recipients.** In 1979 the average AFDC family received aid for 2.1 children, compared with 2.2 in 1977 and 3.0 in 1969. In the most recent year, more than two-thirds of the families had either one or two child recipients and less than one-seventh had more than three. As table 1 shows, the proportion of families with only one child recipient rose from 34 percent to 42 percent in the period 1973-79. In 55 percent of the AFDC families, at least one of the child recipients was under age 6 in 1979. Eighty-three percent of the families had at least one child under age 12.

**Other recipients.** The total number of recipients in the average AFDC family fell from 4.1 in 1969 to 3.2 in 1977 and to 3.0 in 1979. This steady decline reflects a substantial decrease in the number of children per family and a slight decrease in the number of adult recipients. Only one adult—usually the mother—received assistance in about 80 percent of the families, a proportion that remained virtually constant during the period 1969-79. In that span the proportion of families with two adult recipients was halved, falling from 12 percent to 6 percent, while the proportion receiving aid only for children rose by nearly half, from about 10 percent to 15 percent. Families with two adult recipients included unemployed and incapacitated parents. Families without any adult recipients often included a stepfather who was supporting the children's mother.

**Other household members.** The overall composition of AFDC households remained virtually the same in 1979 as it was in 1975. In addition to parents, about 15 percent of the AFDC families contained a grandparent, 9 percent had nonrecipient brothers and sisters (including half and step) of recipient children, and 15 percent contained other relatives.

**Sex of household head.** In 1979, as in 1977, women headed four-fifths of all AFDC households. Most of

these women were the natural or adoptive mothers. By contrast, the Bureau of the Census reports that less than 15 percent of all families in the United States were headed by women in March 1979.

**Place of residence.** The urban character of the AFDC program is reflected in the fact that nearly 80 percent of the families receiving aid in 1979 lived within a Standard Metropolitan Statistical Area (SMSA)—about the same proportion as in 1977. As the tabulation at the right shows, 46 percent of the families resided within a central city with a population of 100,000 or more. The six largest cities in the United States—Chicago, Detroit, Houston, Los Angeles, New York, and Philadelphia—contained nearly 20 percent of all AFDC families.

| Place of residence and population | Percent |
|---|---|
| In SMSA county: | |
| In central city with population of— | |
| 1,000,000 or more | 18.3 |

| 100,000–249,999 | 9.6 |
| Less than 100,000 | 10.3 |
| Outside central city | 21.7 |
| Not in SMSA county | 20.4 |
| Other | .1 |
| Unknown | 1.6 |

**Race and ethnicity.** In 1979, just over half of all AFDC families were classified as white. About 14 percent of the families receiving aid were Hispanic, 40 percent were white (not Hispanic), and 43 percent were black (not Hispanic). Although the racial and ethnic composition of AFDC families did not change much from 1977 to 1979, table 1 reveals a slight reduction (2.7 percentage points) in the proportion of black recipient families from 1973 to 1979 and a corresponding increase (2.6 percentage points) in the combined "White, not Hispanic" and "Hispanic" categories.

**Duration on the rolls.** Families receiving assistance in March 1979 had been on the rolls for a median period of 29 continuous months. The duration of recipiency was measured from the date of the most recent case opening through March 1979 and was based only on cases on the rolls during that month.

## AFDC Parents

**Public assistance status.** In 1979, 91 percent of all AFDC families had a natural or adoptive mother in the home and 9 percent had a natural or adoptive father. Because adults may receive AFDC payments if they are caring for eligible children and meet other criteria, most of these parents—9 in 10 of the mothers and 3 in 4 of the fathers—were also included in the AFDC money grant. Table 2 shows that, of those not receiving AFDC, most of the fathers received Supplemental Security Income (SSI) payments for disability and most of the mothers had a nonassistance source of support, usually the children's stepfather. The most recent survey reveals an increase, from 16.9 percent in 1977 to 17.7 percent in 1979, in the importance of SSI for fathers living at home and not receivng AFDC payments.

**Employment status.** Parents in an AFDC household are required to seek and accept employment if they are able-bodied and not providing full-time care for a child under age 6. In 1979, 1 in every 4 mothers and 2 in every 5 fathers were either working or seeking employment. Of those not in the labor force, 3 in 4 of the fathers and 3 in 5 of the mothers were either incapacitated or caring for a child under age 6. Changes in the program in 1981 provide each State the option to develop work alternatives, including community work experience, to provide jobs instead of welfare, and to demonstrate its own work incentive (WIN) program. The community work experience program (CWEP) provides on-the-job train-

ing and work experience for recipients in order to assist them in moving into regular employment.

**Age.** The median age of AFDC parents dropped sharply from 1969 to 1979—from 33.1 to 28.7 for the mothers and from 44.2 to 35.9 for the fathers. In 1979, more than half the mothers in the home and 3 in 10 of the fathers were under age 30. Seven percent of the mothers and 1.5 percent of the fathers were teenagers—proportions that were almost double those found in the survey conducted 10 years earlier.

**Educational attainment.** Although the majority of parents in AFDC households were not high school graduates in 1979, about twice as many mothers and three times as many fathers held diplomas than did a decade earlier. Of those for whom the educational level was known (about half for both sexes), 18.2 percent of the mothers and 36.5 percent of the fathers had less than a 9th-grade education, 39.9 percent of the mothers and 30.9 percent of the fathers had completed 1-3 years of high school, 36.0 percent of the mothers and 26.7 percent of the fathers were high school graduates, and 5.2 percent of the mothers and 4.2 percent of the fathers had some college training short of a degree. Just under 1 percent of the mothers and 1.5 percent of the fathers were college graduates.

**Nativity and citizenship.** In 1979, 94 percent of the mothers and 88 percent of the fathers in AFDC households were native-born Americans. One percent of the mothers and 1.2 percent of the fathers were naturalized citizens and 3.4 percent of the mothers and 8.7 percent of the fathers were aliens. Only 59 percent of the AFDC mothers and 54 percent of the fathers, however, were born in the State in which they lived in 1979.

### AFDC Children

**Reason for eligibility.** In 1979, 89 percent of the AFDC children received aid because their fathers did not live with them and provided little or no support (chart 2). Table 3 compares the situation in 1979 with that 2 and 6 years earlier. It shows that marital breakup remained the most common basis for eligibility, although lack of a marriage tie between parents gained in importance. Only a small proportion of the children were eligible for AFDC because their fathers were incapacitated or deceased. These categories decreased by about half.

**Age and sex.** The average AFDC child in 1979 was 8 years and 4 months old, compared with an age of 8 years and 11 months in 1969. The tabulation in the next column shows that more than a third of the children in 1979 were under age 6. About 85 percent of the AFDC children were under age 15.

| Age group | Percent in— | |
|---|---|---|
| | 1969 | 1979 |
| Unborn | 0.6 | 0.5 |
| Under 3 | 14.3 | 18.4 |
| 3-5 | 17.6 | 17.6 |
| 6-8 | 18.4 | 17.2 |
| 9-11 | 18.1 | 15.8 |
| 12-14 | 16.4 | 14.8 |
| 15-17 | 12.0 | 12.3 |
| 18-20 | 2.6 | 2.7 |
| Unknown | 0 | .9 |

**Employment experience.** From 1977 to 1979, an increasing proportion of AFDC children worked. In 1979, 4.7 percent of the children aged 16-17 and 8.4 percent of those aged 18-20 were employed, compared with 3.6 percent and 4.6 percent, respectively, in 1977.

## Financial Circumstances of AFDC Families

When a family applies for AFDC, the local welfare agency takes into account all of the income and assets of the adult persons requesting assistance. The income considered includes earnings, a variety of cash income from other sources, noncash income to which the State can assign a monetary value, and certain nontaxable income such as Social Security, Veterans Administration, and workers' compensation benefits. Some of the income is disregarded, or not considered, when calculating the amount of the payment. Each State specifies the types and value of liquid assets and property that the family may hold for current and future needs. All States permit the retention of real property used as a home, though some limit its value. Household goods and clothing usually may be retained, and quite often an automobile of moderate value. The value of other items of real property and liquid assets such as shares of

**Table 3.**—AFDC children: Percentage distribution, by age and reason for eligibility, 1973-79

| Characteristic | 1973 | 1977 | 1979 |

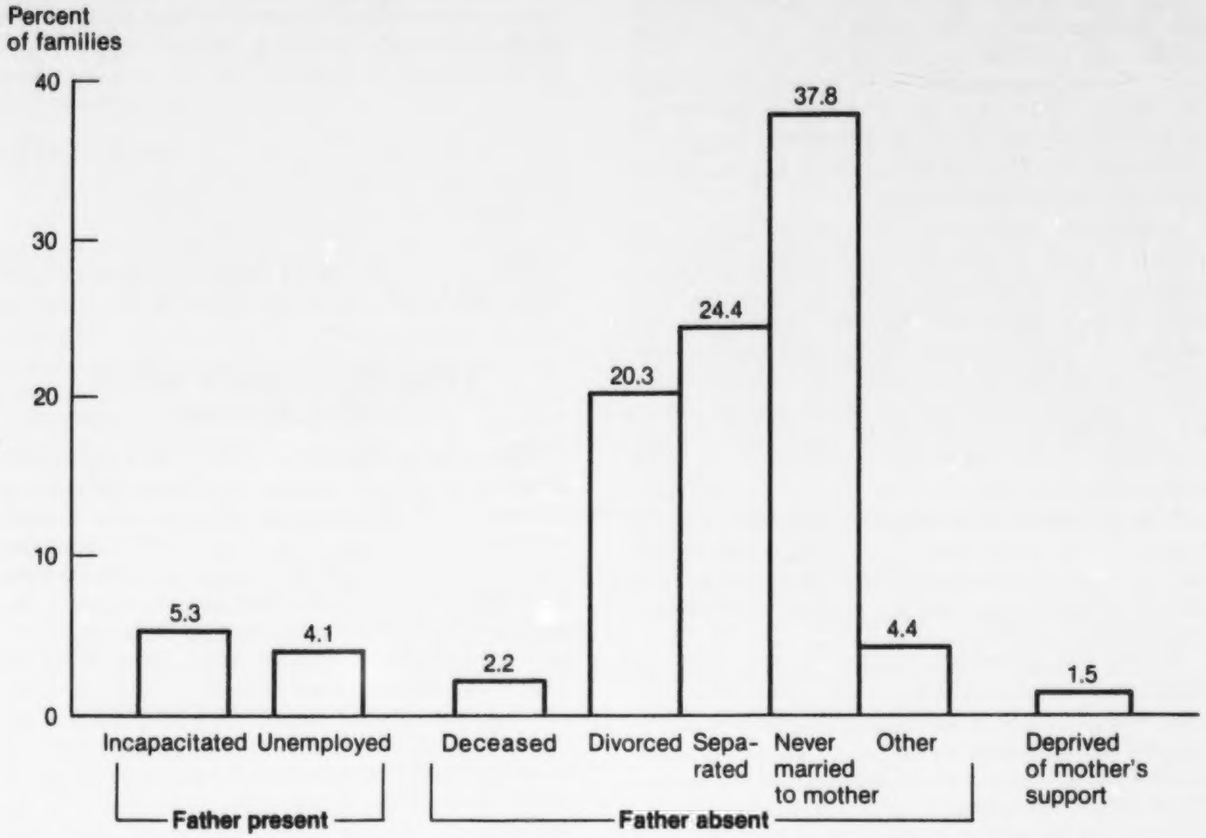
**Chart 2.**—Percentage distribution of AFDC recipient children, by reason for eligibility, 1979



stock, bonds, and the face value and cash reserves of life insurance are always limited. If holdings of such items exceed the State limitation, the family is not eligible for assistance.

## The Benefit Determination Process

Each State establishes in dollar terms the amount of money a given family needs to meet a minimal standard of living in the State. The major elements of this process are (1) the need requirements established by the State, (2) the amount of nonassistance income received by the family, (3) the amount of nonassistance income that can be disregarded, and (4) the AFDC payment. The amount of the payment is determined by subtracting net nonassistance income (after income disregards) from the requirement.

**Need requirements.** The need standard—which covers such items as housing, food, clothing, personal and household items, and utilities—varies by the size and composition of the family. Some States budget a single amount to cover all items, while others budget separate amounts for items such as housing.

In March 1979, monthly requirements averaged $247 for one adult and one child (33 percent of the caseload) and $308 for one adult with two children (23 percent of the caseload). Table 4 shows the need requirements for families of various sizes.

**Nonassistance income.** A lower proportion of AFDC families had nonassistance income in 1979 (19 percent) than in 1977 (22 percent), but the average amount of income increased from $248 to $300 in the period. Table 5 shows that the main source of this income was earnings, primarily those of mothers, which averaged $383 a month. Declines were apparent in the proportion of

**Table 4.**—Average monthly AFDC standard of need in 1979, by number of adult recipients and child recipients

| Child recipients | Adult recipients | | |
|---|---|---|---|
| | None | One | Two |
| One | $135.82 | $246.71 | $324.30 |
| Two | 219.82 | 308.00 | 396.30 |

| Six | 400.82 | 516.08 | 581.04 |
| Seven or more | 631.54 | 532.98 | 616.76 |

**Table 5.**—Percent of AFDC families with nonassistance income and average amount for families with each type, 1979

| Type of nonassistance income | Percent | Average amount |
|---|---|---|
| Total, one or more sources | 19.3 | $299.91 |
| Earnings of one or more persons | 12.8 | 381.11 |
| Mother | 12.2 | 383.00 |
| Father | .5 | 335.45 |
| Children aged 14 and over | .1 | 205.71 |
| Other adults | .1 | 268.52 |
| Public service employment earnings | .1 | 239.50 |
| OASDI and Railroad Retirement benefits | 3.1 | 132.61 |
| Veterans' benefits | .4 | 130.18 |
| Other pensions or benefits | .4 | 143.47 |
| Unemployment compensation | .6 | 236.68 |
| Workers' compensation | .1 | 234.84 |
| Contributions from stepparent in home | .2 | 62.53 |
| Contributions from other persons in home | .6 | 71.66 |
| Other cash income | 1.9 | 80.40 |
| Other income in-kind with money value | .4 | 70.66 |

families receiving other types of nonassistance income. Social Security benefits were the second most important source of nonassistance income, although they were received by only 3 percent of AFDC families.

**Disregarded income.** Disregarded income under AFDC is of two types—mandatory and optional. Examples of the first type are the earnings of AFDC children if they are in school and not employed full time, the first $30 of monthly earnings plus one-third of the remaining gross earned income of other persons in the assistance group, and reasonable work expenses. Optional income that may be disregarded includes up to $5 per month for each AFDC recipient, and amounts set aside for future identifiable needs of AFDC children.

Seventy-one percent of the families with nonassistance income in 1979 had some of it disregarded. The average amount was $255 a month per family. As table 6 shows, most of the disregarded income was related to the $30 + 1/3 work incentive and employment expense provisions. Recently enacted Federal legislation limits to 4 months duration the $30 + 1/3 disregard and sets a standard amount for work expenses and a maximum amount for child care expenses.

**Amount of AFDC and budget summary.** The AFDC families were paid an average of $253 under the program and received an additional $58 in nonassistance income in March 1979. The average need requirement and AFDC payment were considerably higher for families living in metropolitan ($312 and $265) than nonmetropolitan ($258 and $192) areas. Table 7 shows the average AFDC payment for families of various sizes. A family with one adult and one child averaged $209 a month. The average payment to a family with one adult and two children was $257.

**Table 6.**—Percent of families with nonassistance income, by type of income disregarded and average amount of such income for families with each type, 1979

| Type of disregarded income | Percent of families | Amount |
|---|---|---|
| Total | 71.4 | $255.37 |
| $5 or less per person | 5.9 | 6.11 |
| First $30 plus 1/3 of remaining earned income | 64.9 | 147.20 |
| Allowed employment expenses | 60.5 | 129.03 |
| Differentiated: | | |
| Child care | 20.2 | 101.32 |
| Other | 44.3 | 95.29 |
| Undifferentiated | 15.5 | 99.97 |
| For support of dependents outside assistance group | .7 | 90.35 |
| Additional disregarded income | 9.5 | 80.23 |

**Table 7.**—Average AFDC payment amounts, by number of adult recipients and child recipients, 1979

| Child recipients | Adult recipients | | |
|---|---|---|---|
| | None | One | Two |
| One | $115.81 | $208.81 | $272.53 |
| Two | 186.88 | 257.08 | 327.08 |
| Three | 221.44 | 298.86 | 366.23 |
| Four | 286.84 | 345.30 | 413.06 |
| Five | 284.57 | 389.66 | 358.05 |
| Six | 354.23 | 414.93 | 429.40 |
| Seven or more | 455.72 | 412.03 | 419.27 |

Nationally, assistance payments totaled $869 million for March 1979 and nonassistance income amounted to $199 million. More than half ($121 million) of the nonassistance income was not counted in determining the AFDC payments.

The AFDC grant therefore made up the bulk of the cash income available to most families. When assistance and nonassistance cash income were combined, the average amount available for the families of the most common sizes were $229 for one adult and one child and $284 for one adult with two children.

In March 1979, 3 in 4 of the AFDC families also received a supplemental income benefit in the form of food stamps. To participate in this program, low-income households must meet standards set by the Department of Agriculture that consider household size and the income of all family members. The average food stamp benefit per participating AFDC family was $106. A very small proportion of the AFDC families also received general or emergency assistance in addition to AFDC in March 1979. Families that are eligible for AFDC often receive other benefits such as Medicaid, housing assistance, energy assistance, and social services.

## Child Support Enforcement

[1] Emergency relief funds of $1,630.3 million in 1940 total, not included elsewhere. Includes training allowances to unemployed workers under Area Redevelopment Act and Manpower Development and Training Act for 1961–75, not shown separately.

[2] Beginning December 1980, includes public assistance payment revisions for 1940–79.

[3] Retirement and survivor benefits beginning 1940; disability benefits beginning 1957. Beginning Oct. 1966, includes special benefits authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[4] Includes annuities to widows under joint-and-survivor election before 1947. Beginning Feb. 1967, includes supplemental annuities for career railroad employees.

[5] Excludes refunds of contributions to employees who leave service.

[6] Includes survivor annuities under joint-and-survivor elections before 1948.

[7] Represents Federal contributory systems other than civil service, Federal noncontributory systems for civilian employees and career military personnel, and systems for State and local government employees. Monthly data not available.

[8] Payments to veterans and survivors of deceased veterans, including special allowances for survivors of veterans who did not qualify under OASDHI (Servicemen's and Veterans' Survivor Benefit Act of 1956) and through June 1973, subsistence payments to disabled veterans undergoing training.

[9] Death payments.

[10] Includes annual and monthly data for railroad retirement, veterans' programs, and Federal civil service retirement. For "other" public employee systems, annual data only.

[11] Annual and monthly totals include regular State unemployment insurance program and payments made by States as agents of the Federal Government under the Federal employees' unemployment compensation program and under the Ex-Servicemen's Compensation Act of 1958. Annual data only for payments under Servicemen's Readjustment Act of 1944, Veterans' Readjustment Act of 1952, Trade Expansion Act of 1962, Disaster Relief Act of 1970, and the temporary and permanent extended unemployment insurance programs. Beginning 1961, includes program in Puerto Rico.

[12] Benefits in Rhode Island (from 1943), in California (from 1947), in New Jersey (from 1949), in New York (from 1950), in Puerto Rico (from 1970), including payments under private plans where applicable. Monthly data not available.

[13] Benefits began 1947.

[14] Under Federal workers' compensation laws and under State laws paid by private insurance carriers, State funds, and self-insurers. Beginning 1959, includes data for Alaska and Hawaii. Monthly data refer only to Federal "black lung" benefits administered by Social Security Administration (starting 1970).

[15] Includes aid to families with dependent children and general assistance. Through 1973 includes old-age assistance, aid to the blind, and aid to the permanently and totally disabled. Includes payments to intermediate-care facilities (July 1968–December 1971), and payments for emergency assistance, beginning July 1969. Includes money payments under medical assistance for the aged (1960–69). Excludes medical vendor payments. Starting 1974, includes money payments to the aged, blind, and disabled in Guam, Puerto Rico, and the Virgin Islands under federally aided public assistance programs.

[16] Supersedes the public assistance programs of old-age assistance, aid to the blind, and aid to the permanently and totally disabled in the 50 States and the District of Columbia, beginning 1974; beginning 1978, in the Northern Mariana Islands. Annual, but not monthly, totals include payments under State-administered supplementary programs.

[17] Data not available.

Source: Based on reports of administrative agencies on a checks-issued basis (including retroactive payments) where available. Data for public assistance and State unemployment insurance programs adjusted monthly, other data adjusted annually.

[1] Benefit expenditures from the Federal hospital insurance and supplementary medical insurance trust funds as reported by the U.S. Treasury.

[2] Excludes payments by Railroad Retirement Board for beneficiaries in Canadian hospitals.

[3] Benefits in California and New York (from 1950), including payments under private plans. Monthly data not available.

[4] Benefits under Federal workers' compensation laws and under State laws paid by private insurance carriers, State funds, and self-insurers. Beginning 1959, includes data for Alaska and Hawaii. Monthly data not available.

[5] Federal matching for medical vendor payments under public assistance began October 1950.

[6] Data not available.

Source: U.S. Treasury and unpublished data from administrative agencies.

## Table M-3.—Selected social insurance and related programs: Beneficiaries of cash payments, 1940–81

[1] Includes dependents.

[2] Beginning October 1966, includes special benefits authorized by 1966 legislation for persons aged 72 and over and not insured under the regular or transitional provisions of the Social Security Act.

[3] Monthly number at end of quarter.

[4] Average number during 14-day registration period.

[5] Average weekly number in December. Includes regular State unemployment insurance, the Federal employees' unemployment compensation program, and the ex-servicemen's compensation program.

[6] Includes dependents and survivors.

[7] Less than 500.

[8] Data not available.

Source: Based on reports of administrative agencies.

[1] Represents contributions of employees, and the self-employed in employments covered by OASDHI under the Social Security Act, on an estimated basis, with suitable subsequent adjustments. Data for earlier years reflect former appropriation bases. Includes deposits by States under voluntary coverage agreements. Employee-tax refunds deducted. Excludes transfer from general revenues.

[2] Excludes transfers between OASDHI system and railroad retirement account under the financial interchange provisions of the Railroad Retirement Act.

[3] Represents employee and Government contributions. Beginning 1968, also includes Foreign Service and contributory survivor programs for Federal judiciary and Tax Court. For civil service, employee share includes voluntary contributions to purchase additional annuity; government share includes Federal and District of Columbia agency contributions and, beginning 1968, Federal payment for current unfunded liability.

[4] Beginning 1959, net of tax refunds. Contributions for hospital insurance of railroad workers are collected and reported with railroad retirement contribution initially and are transferred once a year (usually in August) to the hospital insurance trust fund; data for that month only are adjusted by the Treasury source to reflect the transfer.

[5] Excludes reimbursement from Treasury general funds for cost of benefits for persons not insured for cash benefits under OASDHI or railroad retirement. Includes contributions for hospital insurance coverage of railroad workers (principal amount only), see footnote 4; and, beginning July 1973, premiums for voluntary coverage of uninsured individuals aged 65 and over.

[6] Through 1952 represents deposits in State clearing accounts of contributions plus penalties and interest collected from employers and contributions from employees (3 States in recent years), as reported by State agencies (to Department of Labor, 1950-52). Starting 1953, represents State deposits in (Federal) unemployment trust fund.

[7] Represents taxes paid by employers under the Federal Unemployment Tax Act. Beginning 1961, net of tax refunds. Includes tax proceeds for financing temporary extended unemployment compensation programs for 1958 and 1961. December 1976 figure includes treasury adjustments (minus) for misclassification of two prior month's taxes.

[8] Beginning 1947, also covers railroad temporary disability insurance.

[9] Preliminary data.

[10] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (Oct. 1, 1976).

---

[1] Equals amounts appropriated (estimated tax collections, subsequently adjusted). Includes deposits by States under voluntary coverage agreements and deductions for refund of estimated employee-tax overpayment. Early years reflect former appropriation bases.

[2] From 1947 to 1951, for benefits with respect to certain World War II veterans. Beginning 1966, for military wage credits, and beginning Dec. 1968 for military credits and Federal payment for special age-72 benefits, see footnote 4.

[3] Includes interfund transfer of interest on reimbursed administrative expenses, 1958 to date (see footnote 6).

[4] Before deductions for (1) SMI premium payments and, when applicable, (2) recoupment of overpayments of hospital and medical service benefits provided to OASI beneficiaries. Includes special benefits for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[5] The purpose of the financial interchange provisions of the Railroad Retirement Act, as amended, is to place the trust funds in the same position in which they would have been had railroad employment always been covered under OASDHI. Negative figures represent transfers to OASI trust fund. Excludes transfers to HI trust fund for hospital insurance coverage of railroad workers (accounted for in table M–7).

[6] Beginning 1951, adjusted for reimbursement to trust fund of small amounts for gifts, sales, or services. Beginning 1953, includes expenses for central and regional office building construction. Except for reimbursements from the appropriate trust fund to Treasury Department for its expenses as incurred, beginning 1957 administrative expenses for OASI and DI were paid initially from OASI trust fund with subsequent reimbursement, plus interest (see footnote 3), from DI trust fund for allocated cost of DI operations. Beginning 1966, subject to subsequent adjustment among all 4 social security trust funds for allocated cost of each operation.

[7] Book value: includes net unamortized premium and discount, accrued interest purchased, and repayment of interest accrued on bonds at time of purchase.

[8] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[9] Reflects assets of predecessor fund, the old age reserve account, January 1937–December 1939.

[10] Preliminary data.

[11] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (Oct. 1, 1976).

[12] Public Law 96–403 approved October 9, 1980, provides for the reallocation of social security tax receipts between the OASI and DI trust funds for calendar years 1980–81. Transfers from the DI to the OASI fund were required to implement the change retroactive to January 1980. A $3,528,795,000 transfer in October 1980 represented the accumulated tax receipts, and a $120,801,000 transfer in April 1981 was the interest earned on this amount.

[1] Equals amounts appropriated (estimated tax collections, subsequently adjusted). Includes deposits by States under voluntary coverage agreements and deductions for refund of estimated employee-tax overpayment. Early years reflect appropriation bases.

[2] Transfers (principal only) from the railroad retirement account with respect to contributions for disability insurance coverage of railroad workers.

[3] From 1950-51, for benefits with respect to certain World War II veterans. Beginning 1966, for military wage credits, and beginning Dec. 1968, for military credits and Federal payment for special age-72 benefits; see footnote 4.

[4] Includes interfund transfer of interest on reimbursed administrative expenses, 1958 to date (see footnote 6).

[5] Before deductions for (1) SMI premium payments and, when applicable, (2) recoupment of overpayments of hospital and medical service benefits provided to OASI beneficiaries. Includes special benefits for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[6] The purpose of the financial interchange provisions of the Railroad Retirement Act, as amended, is to place the trust funds in the same position in which they would have been had railroad employment always been covered under OASDHI. Negative figures represent transfers to OASI trust fund. Excludes transfers to HI trust fund for hospital insurance coverage of railroad workers (accounted for in table M-7).

[7] Beginning 1951, adjusted for reimbursement to trust fund of small amounts for gifts, sales, or services. Beginning 1953, includes expenses for central and regional office building construction. Except for reimbursements from the appropriate trust fund to Treasury Department for its expenses as incurred, beginning 1957 administrative expenses for OASI and DI were paid initially from OASI trust fund with subsequent reimbursement, plus interest (see footnote 3), from DI trust fund for allocated cost of DI operations. Beginning 1966, subject to subsequent adjustment among all 4 social security trust funds for allocated cost of each operation.

[8] Book value: includes net unamortized premium and discount, accrued interest purchased, and repayment of interest accrued on bonds at time of purchase.

[9] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[10] Preliminary data.

[11] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (Oct. 1, 1976).

[12] Public Law 96-403 approved October 9, 1980, provides for the reallocation of social security tax receipts between the OASI and DI trust funds for calendar years 1980-81. Transfers from the DI to the OASI fund were required to implement the change retroactive to January 1980. A $3,528,795,000 transfer in October 1980 represented the accumulated tax receipts, and a $120,801,000 transfer in April 1981 was the interest earned on this amount.

---

[1] Represents amounts appropriated (estimated tax collections with suitable subsequent adjustments) after deductions for refund of estimated amount of employee-tax overpayment; and, beginning July 1973, premiums for coverage of uninsured individuals aged 65 and over.

[2] Transfers (principal only) from the railroad retirement account with respect to contributions for hospital insurance coverage of railroad workers.

[3] Represents Federal Government transfers from general funds appropriations to meet costs of benefits for persons not insured for cash benefits under OASDHI or railroad retirement and for costs of benefits arising from military wage credits.

[4] Interest and profit on investments after transfers of interest or reimbursed administrative expenses (see footnote 6) and interest on amounts transferred from railroad retirement account (see footnote 3).

[5] Represents (1) payment vouchers on letters of credit issued to fiscal intermediaries under sec. 1816 and (2) direct payments to providers of services under sec. 1815 of the Social Security Act.

[6] Subject to subsequent adjustment among all 4 social security trust funds for allocated cost of each operation. Fiscal year 1966 includes "tool-up" period from date of enactment of Social Security Amendments of 1965 (July 20).

[7] Book value: Includes net unamortized premium and discount, and, when applicable, accrued interest purchased and repayments on accounts of interest accrued on bonds at time of purchase.

[8] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[9] Preliminary data.

[10] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (Oct. 1, 1976).

---

[1] Represents voluntary premium payments from and in behalf of the insured aged and (beginning July 1973) disabled.

[2] Represents Federal Government transfers from general funds appropriations to match aggregate premiums paid.

[3] Represents interest and profit on investments, after transfers of interest on reimbursed administrative expenses (see footnote 5).

[4] Represents payment vouchers on letters of credit issued to carriers under section 1842 of the Social Security Act.

[5] Subject to subsequent adjustment among all 4 social security trust funds for allocated cost of each operation. Fiscal year 1966 includes "tool-up" period from date of enactment of Social Security Amendments of 1965 (July 30).

[6] Book value: Includes net unamortized premium and discount, and, when applicable, accrued interest purchased and repayments on account of interest accrued on bonds at the time of purchase.

[7] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[8] Preliminary data.

[1] At the end of 1980 an estimated 40,000 Railroad Retirement beneficiaries would have been eligible for Social Security benefits had they applied. These persons receive their Social Security benefits as part of their Railroad Retirement annuity and are not included in the above tabulations. Of these 40,000 beneficiaries, 19,000 were retired workers, 5,500 were disabled workers, and 15,500 were spouses and children.

[2] Benefits paid from the OASI trust fund to retired workers and their spouses and children and to all survivors. Includes special benefits authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[3] Benefits paid from the DI trust fund to disabled workers and their spouses and children.

**AFDC—Continued from page 9**

absent parents, establish paternity, enforce obligations, and collect child support payments. By 1979, efforts were underway to establish paternity for 44 percent of the children (with success in three-fourths of the cases) and to locate absent parents for 54 percent of the children (with success in about half the cases). Court orders or other obligations for child support had been obtained on behalf of 31 percent of the AFDC families, which contained about one-third of the children whose parents were divorced, separated, or not married to each other. The average monthly amount of child support ordered per family was $116. Child support payments were actually made for about 35 percent of the families with orders or obligations. Under the Child Support Enforcement program, AFDC applicants are required to assign any support rights they have to the State. Thus, collections under that program serve to offset partially the costs of the AFDC program.

## **Table M-10.**—OASDI cash benefits: Number of monthly benefits in current-payment status for retired workers and their spouses and children and for survivors, 1940–81

[Data contain some duplication arising from dual entitlement; see the **1977–79 Annual Statistical Supplement**, p. 11]

| At end of selected month | Total | Retired workers [1] | Wives and husbands [1] [2] | Children [3] | Widowed mothers [4] | Widows and widowers [1] [5] | Parents [1] | Persons with special age-72 benefits [6] |

---

[1] Persons aged 65 and over (and aged 62–64, beginning 1956 for women and 1961 for men).

[2] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[5] Includes, beginning September 1965, widows aged 60–61 and entitled surviving divorced wives aged 60 and over; beginning March 1968, disabled widows aged 50–59 and disabled widowers aged 50–61; and, beginning January 1973, nondisabled widowers aged 60–61.

[6] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

---

[1] Persons aged 65 and over (and aged 62–64, beginning 1956 for women and 1961 for men).

[2] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[5] Includes, beginning September 1965, widows aged 60–61 and entitled surviving divorced wives aged 60 and over; beginning March 1968, disabled widows aged 50–59 and disabled widowers aged 50–61; and, beginning January 1973, nondisabled widowers aged 60–61.

[6] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

**Table M-12.—OASDI cash benefits: Monthly benefits in current-payment status for disabled workers and their spouses and children, 1957–81**

| At end of selected month | Number | | | | Amount (in thousands) | | | |
|---|---|---|---|---|---|---|---|---|
| | Total | Disabled workers [1] | Wives and husbands [2] | Children [3] | Total | Disabled workers [1] | Wives and husbands [2] | Children [3] |
| December: | | | | | | | | |

---

[1] July 1957–October 1960, disabled workers aged 50–64; beginning November 1960, disabled workers under age 65.

[2] Mainly wives under age 65 with entitled children in their care.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] November data; December data not available.

## Table M-13.—OASDI cash benefits: Average amount of monthly benefits, by type of beneficiary, 1940–81

| Period[1] | Retired workers and their spouses and children |  |  | Survivors of deceased workers |  |  |  | Disabled workers and their spouses and children |  |  | Persons with special age-72 benefits[9] |
|---|---|---|---|---|---|---|---|---|---|---|---|
|  | Retired workers[2] | Wives and husbands[2,3] | Children[4] | Children[4] | Widowed mothers[5] | Widows and widowers[2,6] | Parents[2] | Disabled workers[7] | Wives and husbands[8] | Children[4] |  |
|  | Average benefits in current-payment status at end of period |  |  |  |  |  |  |  |  |  |  |
| 1940 | $22.60 | $12.13 | $9.70 | $12.22 | $19.61 | $20.28 | $13.09 | ....... | ....... | ....... | ....... |
| 1950 | 43.86 | 23.60 | 17.05 | 28.43 | 34.24 | 36.54 | 36.69 | ....... | ....... | ....... | ....... |
| 1960 | 74.04 | 38.72 | 28.25 | 51.37 | 59.29 | 57.68 | 60.31 | $89.31 | $34.41 | $30.21 | ....... |
| 1965 | 83.92 | 43.63 | 31.98 | 61.26 | 65.45 | 73.75 | 76.03 | 97.76 | 34.96 | 31.61 | ....... |
| 1970 | 118.10 | 61.19 | 44.85 | 82.23 | 86.51 | 101.71 | 103.21 | 131.29 | 42.55 | 38.63 | $45.22 |

[1] Some years shown in several parts because of amendments changing the benefit provisions.

[2] Persons aged 65 and over (and aged 62–64, beginning 1956 for women and 1961 for men).

[3] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[4] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[5] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[6] Includes, beginning September 1965, widows aged 60–61 and entitled surviving divorced wives aged 60 and over; beginning March 1968, disabled widows aged 50–59 and disabled widowers aged 50–61; and, beginning January 1973, nondisabled widowers aged 60–61.

[7] July 1957–October 1960, disabled workers aged 50–64; beginning November 1960, disabled workers under age 65.

[8] Includes wife beneficiaries under age 65 with entitled children in their care, and, beginning September 1965, entitled divorced wives.

[9] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

## Table M-14.—OASDI cash benefits: Estimated number of beneficiaries with monthly benefits in current-payment status, by age group and by type of benefit, 1940–81

[In thousands. Adjusted to exclude duplication arising from dual entitlement: See the **1977–79 Annual Statistical Supplement**, p. 11]

[1] At the end of 1980 an estimated 40,000 Railroad Retirement beneficiaries would have been eligible for Social Security benefits had they applied. These persons receive their Social Security benefits as part of their Railroad Retirement annuity and are not included in the above tabulations. Of these 40,000 beneficiaries, 19,000 were retired workers, 5,500 were disabled workers, and 15,500 were spouses and children.

[2] Includes spouses and children of disabled workers.

[3] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[4] Fewer than 500.

[5] November data; December data not available.

| December | 238,435 | 117,718 | 26,793 | 54,399 | 6,583 | 32,840 | 40 | 62 |

[1] Persons aged 65 and over (and aged 62–64, beginning 1956 for women and 1961 for men).

[2] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[5] Includes, beginning September 1965, widows aged 60–61 and entitled surviving divorced wives, aged 60 and over; beginning March 1968, disabled widows aged 50–59 and disabled widowers aged 50–61; and, beginning January 1973, nondisabled widowers aged 60–61.

[6] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[7] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

[8] The June awards include only those with the new benefit rates.

## Table M-16.—OASDI cash benefits: Number of monthly benefits awarded to retired workers and their spouses, by payment status at time of award, 1950–81

[Number of awards in thousands]

| Period | Retired workers | | | Wives and husbands | | |
|---|---|---|---|---|---|---|
| | Total awards [1] | Currently payable awards | | Total awards [1] | Currently payable awards | |
| | | Number | Percent of total | | Number | Percent of total |
| 1950 | 567 | [2] 550 | [2] 97 | 163 | [2] 155 | [2] 95 |
| 1955 | 910 | 862 | 95 | 289 | 276 | 95 |
| 1960 | 982 | 883 | 90 | 340 | 315 | 93 |

| September | 95 | 75 | 79 | 20 | 15 | 75 |
| October | 113 | 91 | 81 | 23 | 18 | 78 |
| November | 137 | 115 | 84 | 31 | 26 | 84 |
| December | 118 | 100 | 85 | 27 | 23 | 85 |

[1] Includes awards currently payable and conditional or deferred awards. Conditional or deferred awards are those suspended immediately following determination, chiefly because of earnings of the beneficiary or the worker on whose account benefits are paid; since September 1965 most conditional and deferred awards have been made primarily for the purpose of assuring eligibility for hospital insurance benefits.

[2] Estimated on basis of awards for 10 months.

[3] Data not available.

[4] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

[5] The June awards include only those with the new benefit rates.

## Table M-17.—OASDI cash benefits: Number of monthly benefits awarded to disabled workers and their spouses and children, 1957–81

| Period | Total | Disabled workers [1] | Wives and husbands [2] | Children [3] |

| April | 64,491 | 28,361 | 7,803 | 28,327 |
| May [4] | 89,839 | 39,248 | 11,351 | 39,240 |
| June [5] | 33,977 | 15,581 | 3,660 | 14,736 |
| July | 65,667 | 29,175 | 8,208 | 28,284 |
| August | 61,021 | 27,254 | 7,711 | 26,056 |
| September | 64,624 | 28,882 | 7,778 | 27,964 |
| October | 66,425 | 29,173 | 7,960 | 29,292 |
| November | 62,982 | 28,124 | 7,745 | 27,113 |
| December | 56,097 | 24,829 | 6,969 | 24,299 |

[1] July 1957–October 1960, disabled workers aged 50–64; beginning November 1960, disabled workers under age 65.

[2] Mainly wives under age 65 with entitled children in their care.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18-21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

[5] The June awards include only those with the new benefit rates.

**Table M-18.**—Supplemental security income for the aged, blind, and disabled: Number of persons receiving federally administered payments and total amount, by reason for eligibility, December 1981

| Reason for eligibility | All persons | Amount of payments (in thousands) | | |
|---|---|---|---|---|
| | | Total | Federal SSI | State supplementation [1] |
| Total | 4,018,875 | $734,400 | $575,472 | $158,927 |
| Aged | 1,678,090 | 231,274 | 169,076 | 62,197 |
| Blind | [2] 78,570 | 17,891 | 12,975 | 4,916 |
| Disabled | [3] 2,262,215 | 485,235 | 393,421 | 91,814 |

[1] Excludes payments for State supplementation under State-administered programs.

[2] Includes approximately 24,000 persons aged 65 and over.

[3] Includes approximately 409,000 persons aged 65 and over.

**Table M-20.**—Supplemental security income for the aged, blind, and disabled: Number of persons initially awarded federally administered payments, by reason for eligibility, 1974–81

| Period | Total | Aged | Blind | Disabled |
|---|---|---|---|---|
| 1974 [1] | 890,768 | 498,555 | 5,206 | 387,007 |

[1] Data reported to the Social Security Administration by individual States. All data subject to revision. Excludes data for optional programs in North Dakota.

[2] Includes data for some States not distributed by reason for eligibility.

[3] Represents March 1980 data for Alaska, September 1981 data for Colorado, Minnesota and Nebraska and July 1981 data for Oklahoma; data not available for October 1981.

[4] Less than $500.

[5] Not computed on base of less than $500.

[6] Data not available.

[7] Includes data for the blind.

**Table M-27.—Supplemental security income for the aged, blind, and disabled: Number of persons receiving State-administered State supplementation only and total and average amount, by reason for eligibility and State, October 1981 [1]**

| State | Number of persons | | | | Total amount (in thousands) | | | | Average payment | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | Total | Aged | Blind | Disabled | Total | Aged | Blind | Disabled | Total | Aged | Blind | Disabled |

---

[1] Represents data for payments to recipients of the specified type of assistance under separate programs and under the combined State adult assistance programs. Superseded by supplemental security income program in the 50 States and the District of Columbia, beginning January 1974.

[2] Beginning September 1965, excludes State blind pension program in Pennsylvania administered under State law without Federal participation.

[3] Includes as recipients the children and 1 or both parents or 1 caretaker relative other than a parent in families in which the requirements of such adults were considered in determining the amount of assistance.

[4] Data incomplete.

[5] Represents average per family. Beginning January 1972, includes New York City.

## Table M-29.—Public assistance: Total money payments, by program and emergency assistance, 1945–80

[In thousands. Data subject to revision.]

| Period | Total [1] | Money payments | | | | | | Emergency assistance payments [4] |

---

[1] Includes money payments for institutional services in intermediate-care facilities for 1968–71.

[2] Includes money payments for medical assistance for the aged for 1960–69.

[3] Superseded by supplemental security income program in the 50 States and the District of Columbia beginning 1974. Data for 1974 and thereafter are for only Guam, Puerto Rico, and the Virgin Islands.

[4] Money payments to families and medical vendor payments to needy families with children, authorized under title IV of the Social Security Act.

## **Table M-30.**—Public assistance: Total medical vendor payments, by program, 1951-78

[Data subject to revision]

| Period | Total amount of payments (in thousands) | | | | |
|---|---|---|---|---|---|
| | Total | Federally aided programs [1] | | | General assistance [3] |
| | | Medical assistance [2] | Medical assistance for the aged | Other | |

[1] Federal participation in medical vendor payments, beginning October 1950, was authorized by the social security amendments.

[2] Beginning Jan. 1970, medical assistance for the aged and medical vendor payments under the categorical programs were replaced by the medical assistance program. Beginning Jan. 1972, includes payments to intermediate-care facilities formerly listed separately in table M-29.

[3] Data incomplete.

[1] Case count may be inflated because States reporting identical number of cases and children may count each child in foster care as a family case.

[2] Data incomplete, see footnote 4.

[3] Data estimated.

[4] Data not reported.

[5] Not computed on base of fewer than 50 cases or children.

---

[1] Data not reported by some States because (1) programs are administered by townships and local areas and reports are not available, or (2) counties are unable to report on their State-assisted programs, or (3) program has been suspended. New Jersey data includes assistance under the "Insufficient Employment of Parents" program; Maryland data includes a State program of assistance to families with dependent children. In other States the program covers "home relief," "general welfare," "relief," etc.—State and local programs not federally aided.

[2] Data estimated.

[3] Not computed on base of fewer than 100 recipients.

**Table M-36.**—Black lung benefits: Number of beneficiaries, average monthly family amount, and total monthly family amount in current-payment status, 1970–81 [1]

[1] Benefits payable under the "black lung" program established by the Federal Coal Mine Health and Safety Act of 1969. The program is administered by the Social Security Administration but is financed from the general funds of the Treasury.

[2] Includes benefits for dependent wife and/or child.

[3] Includes benefits for dependent child of widow, surviving child, parent, brother, and sister.

## **Table M-37.**—Unemployment insurance: Selected data on State programs, 1940–81

[Excludes programs for Federal employees and for ex-servicemen; includes unemployment compensation for State and local government employees where covered by State law]

| | Average weekly insured employment [1] | | | All types of compensated unemployment | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| Period | Number of workers [2] | Percent covered employment [3] | Initial claims (weekly average) [4] | Number of first payments | Weeks compensated | Benefits paid [5] (in thousands) | Average weekly number of beneficiaries | Average weekly benefit for total unemployment [6] | Number of claimants exhausting benefits | Funds available for benefits end of period [7] (in thousands) |
| 1940 | 1,282,385 | 5.6 | 214,231 | 5,220,073 | 51,084,375 | $518,700 | 982,392 | $10.56 | 2,596,129 | $1,817,108 |

[1] Beginning July 1963, includes Puerto Rican sugarcane workers' program.

[2] Workers reporting completion of at least 1 week of unemployment.

[3] Annual rates based on average covered employment in specified year; monthly rates on average for most recent 12-month period.

[4] Notices filed by workers to indicate they are starting periods of unemployment. Excludes transitional claims.

[5] Annual data, but not monthly, adjusted to exclude voided benefit checks and transfers under interstate combined-wage plan. Through 1970, includes payments under State (but not Federal) temporary extended unemployment insurance provisions; beginning 1971, excludes such payments.

[6] Includes dependents' allowances in States that provide such benefits.

[7] Sum of balances in State clearing accounts, benefit-payment accounts, and State accounts in Federal unemployment trust fund.

[8] Data not available.

[1] Workers reporting completing at least 1 week of unemployment.

[2] Based on average covered employment for most recent 12-month period.

[3] Notices filed by workers to indicate they are starting periods of unemployment. Excludes transitional claims.

[4] Voided benefit checks and transfers under interstate combined-wage plan not deducted. Excludes payments under temporary unemployment insurance provisions.

[5] Includes dependents in States that provide such benefits.

[6] Includes data under the Puerto Rican sugarcane workers' program for average insured unemployment and initial claims (sugarcane data not available for other items).

Source: Department of Labor, Office of Administration and Management, based on data submitted by State agencies.

## Table M-39.—Gross national product and personal income, by type, 1950–81

[Amounts in billions. Monthly amounts at annual rates. Before 1960, data for the 48 States and the District of Columbia, except where otherwise noted; beginning 1960, includes Alaska and Hawaii]

| Period | Gross national product [1] | Personal income | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | Total | Wage and salary disbursements [2] | Social insurance and related payments [3] | | Public assistance and related payments [4] | | Other income [5] | Less personal contributions for social insurance [6] |
| | | | | Amount | Percent of personal income | Amount | Percent of personal income | | |
| 1950 | $286.2 | $226.1 | $147.0 | $7.0 | 3.1 | $2.3 | 1.0 | $72.7 | $2.9 |
| 1955 | 399.3 | 308.8 | 211.7 | 13.1 | 4.2 | 2.5 | .8 | 86.7 | 5.2 |

[1] Monthly data represents amount at annual rate.

[2] Includes payments in kind; includes pay of Federal civilian and military personnel in all areas.

[3] Includes government transfer payments to beneficiaries under OASDHI, railroad retirement, public employee retirement, unemployment insurance, MDTA training allowances, trade adjustment assistance, "black lung," and veterans' pensions and compensation programs; cash and medical payments under workers' compensation and temporary disability insurance; and court-awarded benefits for work injuries sustained by railroad, maritime, and other workers under Federal employer liability acts.

[4] Includes government transfer payments to recipients of direct relief under programs of old-age assistance, aid to families with dependent children, aid to the blind, aid to the permanently and totally disabled, and general assistance. Excludes payments made in behalf of recipient to suppliers of medical care (vendor payments). Beginning 1961, includes bonus value of food stamps. Beginning 1974, includes supplemental security income payments.

[5] Includes proprietors' income, dividends, personal interest, and rental income; other transfer payments not enumerated in footnotes 2 and 3 (such as Government life insurance payments, World War bonus payments, mustering-out pay and terminal-leave benefits to discharged servicemen, subsistence allowances to veterans at school); and employer contribution to private pensions and welfare funds and other labor income (except compensation for injuries).

[6] Includes life insurance premium payments for veterans.

[7] Data revised March 1981.

Source: Department of Commerce, Bureau of Economic Analysis. Data regrouped to highlight items of special interest to the social security program.

## Table M-40.—Civilian population and labor force, 1940–81

| Period | Resident population, total (in thousands) [1] | Civilian population (in thousands) [1] | | | Civilian labor force aged 16 and over (in thousands) [2] | | | Unemployment as percent of civilian labor force | |
|---|---|---|---|---|---|---|---|---|---|
| | | Total | Under age 18 | Aged 65 and over | Total | Employed | Unemployed | Unadjusted | Seasonally adjusted |
| 1940 | 132,457 | 132,129 | ....... | ......... | 55,640 | 47,520 | 8,120 | 14.6 | .......... |
| 1945 | 133,434 | 128,112 | ....... | ......... | 53,860 | 52,820 | 1,040 | 1.9 | .......... |
| 1950 | 151,868 | 150,790 | ....... | ......... | 62,208 | 58,920 | 3,288 | 5.3 | .......... |

[1] Includes Alaska and Hawaii for all years. Annual data are estimated as of July 1. Data not adjusted for errors of coverage and of age misreporting.

[2] Annual data are averages of monthly figures. Beginning 1960, includes Alaska and Hawaii. Data for 1950 and 1955 adjusted to reflect definitions adopted January 1957; two groups (those on temporary layoff and those waiting to start new wage and salary jobs within 30 days) formerly classified as employed—with a job, not at work—were assigned to other classifications, chiefly to the unemployed. Beginning 1962, comparability with previous years affected somewhat by the introduction of material from the 1960 Census (level of labor force and employment lowered by about 150,000). Before January 1967, series show aged 14 and over.

Source: Population data from Bureau of the Census, Department of Commerce. Labor-force data from Bureau of Labor Statistics, Department of Labor.

## **Table M-41.**—Consumer price index for urban and clerical workers, 1940–81 [1]

[1967 = 100; yearly data are annual averages]

| Period | All items | All items less medical care | Medical care | Food | Apparel and upkeep | Housing | Transportation | Personal care | Reading and recreation | Other goods and services | All services |

Social Security Bulletin
Annual Statistical Supplement, 1981
U.S. Department of Health and Human Services
Social Security Administration

- Each month the **Social Security Bulletin** reports the current outlook for the Old-Age, Survivors, and Disability Insurance program.
- This is a landmark year for Social Security: the National Commission on Social Security Reform is seeking solutions to program financing problems. The **Bulletin** will keep you up-to-date on Commission findings.
- The **Bulletin** also presents in-depth research data on such programs as Aid to Families with Dependent Children, Supplemental Security Income, and Medicare.
- Subscribe today to the Social Security Administration's official research journal. You'll get the next 12 monthly **Bulletins** and receive *free* the **Annual Statistical Supplement**, a major reference volume of nearly 200 tables that also includes a detailed section on Social Security history and development.

**Current Operating Statistics:**

36 Monthly Tables

The **Social Security Bulletin** is the official monthly publication of the Social Security Administration. Calendar-year data for each year 1939-48 were published in the **Social Security Yearbooks** and, beginning with data for 1949, in the **Annual Statistical Supplements** to the **Bulletin**. (The **Supplements** with data for each year 1949-54 were included in the September **Bulletin**, 1950-55; beginning with 1955 data, the **Supplement** is a separate publication.) Statements in **Bulletin** articles do not necessarily reflect official policies of the Social Security Administration.

The **Bulletin** is prepared in the Office of Research and Statistics, Office of Policy, Social Security Administration, under the general supervision of Robert Robinson, Chief of the Publications Staff, and the editorial supervision of Marilyn Thomas. Suggestions or comments concerning the **Bulletin** should be addressed to the Office of Research and Statistics.

The **Social Security Bulletin** is for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. A copy of the **Supplement** is included in the annual subscription price of the **Bulletin**.

Price: $22.00 a year in the United States and $27.50 in all other countries; single copies, $3.50 domestic and $4.40 foreign. Price of the 1980 **Supplement** is $5.50 domestic and $6.90 foreign.

Use of funds for printing this publication has been approved by the Office of Management and Budget.

## OASDI and SSI Increases

The automatic provisions of the Social Security Act have triggered a 7.4-percent increase in monthly cash benefits under the Old-Age, Survivors, and Disability Insurance (OASDI) program, effective for the month of June and payable in early July. The adjustment also raises the federally guaranteed level of payments under the Supplemental Security Income (SSI) program by 7.4 percent, effective and payable in July.

The automatic increases reflect the rise in the average monthly Consumer Price Index from the first 3 months of 1981 to the first 3 months of 1982. Previous cost-of-living increases were 6.4 percent in 1976, 5.9 percent in 1977, 6.5 percent in 1978, 9.9 percent in 1979, 14.3 percent in 1980, and 11.2 percent in 1981. The 7.4-percent adjustment raises the average monthly OASDI benefit for a retired worker without dependents from $379.00 to $406.00 and that for a couple, both members of which are receiving benefits, from $648.00 to $695.00. The maximum Federal SSI payment for an individual with no other countable income and living in his or her own household rises from $264.70 to $284.30, and that for a similar couple goes from $397.00 to $426.40.

## Program Operations

### OASDI Benefits

In January 1982, the Old-Age, Survivors, and Disability Insurance (OASDI) program awarded monthly cash benefits to 423,894 persons. Forty-six percent of these awards were to retired workers and 7 percent to disabled workers. Eighty-nine percent of all awards and 88 percent of awards to retired workers were immediately payable. The average monthly benefit amounts for currently payable awards were $398.04 for retired workers and $420.39 for disabled workers.

At the end of January 1982, 36,082,065 beneficiaries under the OASDI program were receiving cash benefits totaling $12.3 billion—an increase of 333,000 in the number of beneficiaries and $1.5 billion in monthly benefits since January 1981. The OASI program accounted for 95 percent of the rise in the amount of monthly benefits and 100 percent of the increase in the number of beneficiaries. Retired workers numbered 20,293,570 or 56 percent of the total number of OASDI beneficiaries.

During the 12-month period ended January 1982, the monthly amount of OASI and DI benefits rose 15 percent and 6 percent, respectively. The number of OASI beneficiaries increased 2 percent while the number of DI beneficiaries decreased 5 percent.

Average monthly benefit amounts payable in January 1982 to retired and disabled workers were $386.62 and $412.92, respectively. A year earlier, average benefits were $342.29 for retired workers and $370.91 for disabled workers.

### SSI Payments

**Federally administered payments.** In January 1982, 4,019,000 persons received federally administered Supplemental Security Income (SSI) payments, an increase of 200 from December 1981. The number of disabled recipients increased by 2,800 and the blind by 50, while the aged caseload dropped by 2,700. Among individual States, 21 out of 51 reported an increase in their overall caseload.

| OASDI | January 1982 | December 1981 | January 1981 |
|---|---|---|---|
| **Monthly beneficiaries, total** (in thousands) | 36,082 | 36,006 | 35,749 |
| Aged 65 and over, total | 24,472 | 24,438 | 23,884 |
| Retired workers | 18,113 | 18,081 | 17,602 |
| Survivors and dependents | 6,284 | 6,281 | 6,191 |
| Special age-72 beneficiaries | 75 | 76 | 91 |
| Under age 65, total | 11,610 | 11,568 | 11,865 |
| Retired workers | 2,180 | 2,115 | 2,075 |
| Disabled workers | 2,760 | 2,746 | 2,857 |
| Survivors and dependents | 6,670 | 6,677 | 6,933 |
| **Total monthly benefits** (in millions) [1] | $12,304 | $12,255 | $10,756 |
| **Average benefit in current-payment status:** | | | |
| Retired workers | $386.62 | $385.97 | $342.29 |
| Disabled workers | 412.92 | 413.15 | 370.91 |
| Aged widows and widowers | 346.48 | 346.08 | 308.42 |
| Children of deceased workers | 271.08 | 270.94 | 239.87 |
| **Average benefits awarded:** | | | |
| Retired workers | $410.28 | $396.28 | $378.93 |
| Disabled workers | 419.90 | 419.30 | 392.66 |
| Aged widows and widowers | 347.73 | 340.57 | 312.55 |
| Children of deceased workers | 265.95 | 266.48 | 239.16 |

[1] In current-payment status; excludes lump-sum and retroactive payments and adjustments.

Federally administered payments totaled $740.1 million in January, up $5.7 million from the previous month. Federal SSI payments of $578.3 million and State supplementation payments of $161.8 million increased by $2.8 million and $2.9 million, respectively.

**State-administered supplementary payments.** In November 1981, the number of persons receiving State-administered supplementation rose slightly to 250,100. Expenditures for State supplements also increased—from $19.3 million in October to $19.4 million in November. The average monthly State payment remained relatively constant at $77 per recipient.

# The Bellmon Report *

## EXECUTIVE SUMMARY

Section 304(g) of P.L.96-265, the "Social Security Disability Amendments of 1980," requires that the Social Security Administration (SSA) institute a program of ongoing review of administrative law judge (ALJ) decisions on claims for Social Security disability benefits. This section—commonly referred to as the Bellmon amendment—is intended to ensure that hearings decisions by ALJs conform to statute, regulations, and binding policy. Decisions which do not meet these criteria are to be administratively reversed.

Section 304(g) further requires that the Secretary of Health and Human Services submit to the Congress by January 1982 a report on progress toward implementing the ongoing review. This report has been prepared to fulfill that requirement. As requested by the Conference Committee on P.L. 96-265, it also attempts to identify the effect of certain factors on ALJ decisions.

Initial decisions on applications for disability benefits and reconsiderations of those decisions are made by SSA district offices and State disability determination services (DDSs). Denials may be appealed sequentially to an ALJ, to the Appeals Council in SSA's Office of Hearings and Appeals (OHA), then to Federal district courts. The requirement for this report arose from congressional concern with the increasing number of denials being appealed to ALJs and the high percentage of DDS denials that were being overturned by ALJs.

SSA has now completed an initial review that is the basis of this report and that provided guidance for an ongoing review, which was begun in October 1981.

### Findings of the Initial Review

The initial review was based on a sample of 3,600 recent ALJ decisions on disability cases. The case folders were reviewed by two different units within SSA: the Office of Assessment (OA), which operated under the standards governing the DDSs, and the Appeals Council, which applied the standards and procedures governing ALJ decisions. Each unit made new decisions on each case without being aware of the original ALJ decision or the decision of the other reviewing organization. These new decisions were used only for analytical purposes; they were not used to actually alter the original ALJ determination.

The major finding of the initial review was that significant differences in decision results were produced when these different decisionmakers were presented with the same evidence on the same cases. The ALJs allowed 64 percent of the cases. The Appeals Council, applying ALJ standards, allowed 48 percent. OA, applying DDS standards, allowed only 13 percent.

An examination of the standards and procedures governing the ALJs and DDSs indicates distinct differences. In certain instances, operational definitions are not identical. In other instances, ALJ procedures permit a finding of disability that is not possible under the DDS standards. Finally, in some areas the definitions contained in the standards are the same, but procedures differ for evaluating evidence of impairment.

Initial review data also indicated that, even when decisionmakers were applying the same standards, they were not applying them consistently. The Appeals Council denied 37 percent of the cases which ALJs allowed, and allowed 21 percent of the cases which ALJs denied. A detailed examination of the cases on which both the ALJs and the Appeals Council agreed shows that the Council agreed with the ALJs as to the basis for an allowance or denial much less frequently than it agreed on whether the case should be allowed or denied. Moreover, if the Appeals Council decision is taken as the "correct" decision under the rules governing ALJs, the review indicates that decisions to allow cases by ALJs with high allowance rates are more often "incorrect" than the decisions of ALJs with lower allowance rates.

There are also indications that varying quality control procedures and management emphases, in combination with the subjective element in the disability determination process, may contribute to the distinct differences and trends in disability decisions made at the different organizational levels.

Results from the review suggest that the in-person appearance of claimants at ALJ hearings may make a difference. The ALJ hearing is the first time that the

---

* Prepared by the Department of Health and Human Services, Social Security Administration. The Bellmon Report is reprinted here in its entirety.

claimant appears before a decisionmaker. As part of the review, all information related to the claimant's in-person appearance was removed from a special subsample of case folders and these folders were then distributed to other ALJs for readjudication based on the case record. The original ALJ allowance rate of more than 60 percent dropped to 46 percent when the in-person information was removed from the case.

Data from this special subsample also show that additional medical evidence submitted after the DDS decision significantly affects ALJ allowance rates. The ALJ allowance rate dropped from 46 percent to 31 percent when all evidence added after the final DDS decision was deleted from folders in the sample.

### The Ongoing Review

SSA's ongoing review, implemented in October 1981, will identify ALJ decisions that are inconsistent with SSA policy and standards and revise those decisions as appropriate.

The review is being conducted by the Appeals Council, which has the authority to review all ALJ decisions and dismissal actions at the request of the claimant or on its own motion. The current review sample of about 7 1/2 percent of total ALJ allowances in Disability Insurance cases has been selected from the decisions of ALJs and hearing offices with the highest allowance rates. In addition to enabling SSA to correct erroneous decisions, this review will provide SSA with the ability to continuously monitor the disability adjudication process to ensure that problems identified in the initial review are corrected and that any additional areas of weakness are identified and acted upon.

Later in fiscal year 1982, the ongoing review will be expanded; by the end of the fiscal year, we plan to review 15 percent of ALJ allowance decisions on Disability Insurance claims.

### Other Initiatives at the Hearing Level

To address the problem of different adjudicative standards and procedures being used by DDSs and ALJs, the Social Security Administration will disseminate a single set of standards to be followed at all levels of adjudication. These standards will be based on those currently governing the DDSs.

The Office of Hearings and Appeals also has established a special staff in its central office to develop new and more extensive training programs for ALJs and their staffs. Through its training initiatives, OHA expects to promote among ALJs and their support staffs a better understanding and application of both current and revised standards and procedures, resulting in greater consistency and accuracy in decisionmaking.

OHA is discontinuing the current allowance decision forms used by ALJs. A revised format has been developed to ensure not only that allowance decisions contain specific explanations for the favorable conclusions, but also that they reflect adherence to the process of sequential disability evaluation directed by the regulations.

Further, an experiment will be undertaken later this year to determine whether participation of an SSA representative at ALJ hearings in which the claimant is represented will improve the quality and timeliness of hearing decisions.

### Initiatives to Improve DDS Performance

As required by the 1980 Disability Amendments, SSA has begun a preeffectuation review of DDS disability allowances. This preeffectuation review, in which incorrect decisions made by the DDSs are reversed prior to notification of the claimant or payment of any benefits, is intended to promote the uniformity and accuracy of disability allowances made by the DDSs.

SSA is also conducting three experiments that test various changes in the DDS reconsideration process. These changes may result in more consistent decisions when cases move on to ALJ hearings.

In summary, SSA has undertaken a number of activities designed to respond to the problems identified in the initial review. The most significant are probably the ongoing review of ALJ decisions required by P.L. 96-265, and the initiation of changes required to ensure that all SSA disability decisionmakers are governed by the same standards. These actions, in conjunction with the other initiatives discussed in this report, should greatly improve the accuracy and consistency of disability decisions made throughout the SSA adjudicative system.

## Introduction

During the past decade, the Social Security Disability Insurance program has come under considerable congressional scrutiny. This decade of review culminated in Public Law 96-265, the "Social Security Disability Amendments of 1980."

The primary purpose of these amendments was to strengthen the integrity of the disability programs by placing a limit on the amount of Disability Insurance benefits in those cases where the benefits tend to exceed the net predisability earnings of the disabled worker, by providing positive incentives (as well as removing disincentives) for disability beneficiaries to return to work, and by improving accountability and uniformity in the administration of the disability programs.

Section 304(g) of the 1980 Amendments required the Secretary of Health and Human Services to review, on his own motion, disability decisions made by administrative law judges (ALJs). This provision—commonly referred to as the Bellmon Amendment—arose out of the congressional concerns about the increasing number of disability decisions being appealed to the hearing level, the high percentage of allowances at that level, and the accuracy and consistency of ALJ decisions. ALJs were allowing a larger proportion of cases than they had in the past, and the backlog of cases awaiting hearing was rapidly increasing.

This report was prepared in response to the congressional requirement to initiate a review of disability decisions at the hearing level and to report on that review. Chapter I presents the details of the congressional mandate. Chapter II provides background information on the disability benefit programs and the process of adjudicating disability claims. Chapter III discusses the findings of the Social Security Administration's initial review of ALJ decisions. Chapter IV discusses the progress in implementing an ongoing review of ALJ decisions. In addition, this final chapter also discusses other initiatives undertaken by the Secretary to improve the quality of disability adjudication at both the hearing and prehearing levels.

## I. The Congressional Mandate

Section 304(g) of P.L. 96-265 (the Bellmon Amendment) provides that:

> The Secretary of Health and Human Services shall implement a program of reviewing, on his own motion, decisions rendered by administrative law judges as a result of hearings under section 221(d) of the Social Security Act, and shall report to the Congress by January 1, 1982, on his progress.

The Conference Committee agreed to this provision after striking language which specified what was to be included in the required report. The discussion of this provision contained in the Conference Report, however, states the conferees' belief that the Secretary's report should include the percentage of ALJ decisions being reviewed and should describe the criteria for selecting the decisions to be reviewed. The conferees also indicated that the Secretary's report should identify the effects of five specific factors on ALJ decisions:

(1) Claimants' first appearance in person before a decisionmaker;
(2) Additional evidence submitted at the hearing level;
(3) Significant changes in State agency denial rates;
(4) Differences between State agency (DDS) and ALJ policy guidelines;
(5) Differences in standards applied by ALJs.

To respond to the congressional mandate for a review program and for a report to address the above factors, SSA decided on a dual approach: an initial review designed to collect necessary data and an ongoing review designed to ensure that hearing decisions conform to statute, regulations, and binding policy. The initial review collected information on differences in adjudication between the prehearing and hearing levels and on the degree of uniformity at the hearing level. The information obtained from the initial review was also used to develop an ongoing program of own-motion review, which began October 1, 1981.

## II. Background

The Social Security Disability Insurance (DI) program, providing cash benefits to disabled workers age 50 and older, was established by Congress in 1956. Dependents' benefits were added in 1958 and the age-50 requirement was eliminated in 1960.

To qualify for benefits an individual must meet certain insured status requirements. These requirements have been modified over the years, but still require that workers (other than the blind) who are disabled after age 31 must have worked in employment or self-employment covered by Social Security for 5 out of the last 10 years prior to their disability. For workers under age 25 the minimum requirement is 1 1/2 years of work out of the 3 years prior to disability; for workers age 25 through 31, progressively more years of coverage are required. A worker is required to wait 5 full calendar months after the onset of disability before benefits are payable.

The Social Security Amendments of 1972 "federalized" the State public assistance programs for the needy aged, blind, and disabled into the Title XVI Supplemental Security Income (SSI) program. This program pays Federal benefits, under uniform rules, financed from general revenues. Payments under the SSI program, which started in January 1974, may be supplemented by the individual States. Under SSI, disabled or blind persons on the State programs before July 1973 were automatically "grandfathered in" under the States' own definitions of disability. New applicants and applicants who came on the welfare rolls after June 1973 must meet the same definition of disability as applicants under the Disability Insurance program. They are not subject, however, to any waiting period.

### A. Definition of Disability

The statutory definition of disability originally required that the worker must be unable "to engage in any substantial gainful activity by reason of any medically determinable physical or mental impairment which can be expected to result in death or be of long-continued and indefinite duration." In 1965, the statutory language was changed to stipulate a duration requirement of at least 12 months in place of the previous "long-continued and indefinite duration" requirement. Amendments in 1967 further specified that an individual's physical or mental impairment(s) must be ". . . of such severity that he is not only unable to do his previous work but cannot, considering his age, education and work experience, engage in any kind of substantial gainful work which exists in the national economy, regardless of whether such work exists in the immediate area in which he lives, or whether a specific job vacancy exists for him, or whether he would be hired if he applied for work." (Sections 223 and 1614 of the Social Security Act.)

## B. The Disability Decision—A Sequential Evaluation Process

The standards for evaluating disability claims are not further defined in the statute itself, but rather are set forth in SSA regulations (20 C.F.R. parts 404 and 416, subparts P and I, respectively) and written guidelines. The regulations are intended to ensure uniformity and fairness in the disability determination process. They set out a sequence of steps and criteria for determining whether or not an applicant meets the definition of disability in the law.

The first step in the sequential evaluation is to determine whether the claimant is currently engaged in substantial gainful activity (SGA). The law requires the Secretary of HHS to prescribe, by regulation, the criteria for determining when services or earnings from services demonstrate an individual's ability to engage in SGA. The regulations establish dollar amounts of earnings; earnings above these amounts ordinarily show that an individual is engaged in SGA and therefore is not disabled for purposes of the Social Security definition. This amount is currently $300 a month.

The next step in the sequence is to determine whether the claimant has a "severe" impairment. The regulations define "severe" impairment as one that "significantly limits physical or mental ability to do basic work activities." (Sections 404.1520(c) and 416.920(c).) If the claimant does not have an impairment that is considered severe, the claim is denied on medical considerations alone.

If the claimant does have a severe impairment that meets the duration requirement, the next step is to determine whether the impairment meets or equals the degree of severity in the Medical Listing of Impairments. This rule, commonly referred to as the "Medical Listings," is published in regulations (Appendix 1 of subpart P of part 404 of the Social Security regulations). The Medical Listings describe specific diagnostic signs, symptoms, and clinical laboratory findings for various common impairments which are considered severe enough to ordinarily prevent a person from doing any gainful activity on an ongoing basis. If the signs, symptoms, and findings for the claimant's impairment meet those listed in the regulations, the claimant is allowed benefits on the basis of meeting the Listings. If not, but the claimant suffers from several impairments, the claimant may be found to be disabled on the basis that, in combination, these impairments equal in severity an impairment found in the Medical Listings.

If the claimant is not found to be disabled on the basis of the medical criteria in the Listings, a determination is made of the claimant's residual functional capacity (RFC). Residual functional capacity is the claimant's physical and mental ability to perform various types of work-related functions. Assessment of residual functional capacity requires consideration of both exertional impairments (those limiting strength) and nonexertional impairments (e.g., mental, sensory, or skin impairments). Once the claimant's RFC has been established, a judgment is made as to whether the claimant is able to perform his or her relevant past work. If it is found that the past work can be performed, the claim will be denied.

If the claimant is found to be unable to do his or her previous work, the next step in the process is to evaluate the factors of age, education, training, and work experience in conjunction with whatever residual functional capacity the claimant has been found to possess. This assessment, in turn, is used in deciding whether the claimant can perform any other jobs which exist in significant numbers in the national economy. The medical-vocational rules that guide this last step in the evaluation are set forth in regulations.

There are three tables in the medical-vocational rules, one for each of three levels of RFC—ability to do medium work, light work, or only sedentary work. (Impairments which do not preclude performance of heavy work are generally considered to be nondisabling.) Administrative notice has been taken of the fact that a number of jobs exist in the national economy that can be performed by persons with each level of RFC. The tables, in addition, relate the requirements of such jobs to the vocational factors of age, education, and prior work experience. The regulations specify that the medical-vocational rules will direct decisions on cases in which a claimant's RFC is significantly affected only by exertional impairments and the claimant's RFC, age, education, and work experience match those attributes in the table. They do not direct decisions on disability for claimants with solely nonexertional impairments, and do not specifically direct conclusions on disability for claimants with combinations of exertional and nonexertional impairments. In these types of cases, the medical-vocational rules are to be used as a guide, or general framework, for determining disability.

## C. The Disability Decision System—Structure and Process

The disability determination process, which is essentially the same for both DI and SSI disability and blindness claims, can involve decisions at five distinct levels. The structure and procedures of each decision level (prior to P.L. 96-265) are discussed briefly below.

### 1. Initial Determination by SSA District Offices and State Agencies

Applications for DI and SSI disability benefits are filed by claimants in one of SSA's district offices. The district offices accept applications, obtain the names of the physicians, hospitals, or clinics that have treated the claimants, and make all the nonmedical eligibility determinations based on such factors as insured status, work activity, and for SSI claims, income and resources. If the claim is denied because the applicant does not meet these nonmedical eligibility requirements, a formal notice is sent.

A claimant's application, any medical records he or she may have provided, lists of sources of medical evidence, and other background information obtained during the district office interview are forwarded to the disability determination service (DDS) in the claimant's home State. The DDSs are State agencies and are usually components of State vocational rehabilitation agencies. Their total operating costs are paid by SSA.

The DDS requests detailed medical reports from physicians who have treated the claimant. This procedure uses clinical and laboratory findings in the files of treating physicians and has been successful in expediting the gathering of complete medical information and in limiting the need for purchased examinations. However, if sufficient medical information cannot be obtained in this manner, the DDS may purchase a consultative examination—that is, ask the claimant to be seen by a private physician selected by the DDS. The DDS may also seek more information pertaining to the claimant's education and work experience from the claimant.

After the required evidence has been obtained, a two-person DDS team consisting of a physician and a lay disability examiner makes a decision on the claim. The DDS physician determines from the medical evidence the extent to which physical or mental limitations exist, whether the impairment meets or equals the Medical Listings and, when required, assesses residual functional capacity. The DDS lay examiner determines whether, with those limitations, the claimant can or cannot perform substantial gainful activity in jobs that exist in the national economy, based on the claimant's age, education, and work experience. DDS determinations are then issued as Federal decisions and the claimant is notified of the decision. If the claim is denied, the formal notice indicates why and advises the applicant of his or her appeal rights.

### 2. Reconsideration by State Agencies

Claimants whose applications are denied have a right to have their claims reconsidered, but must file for reconsideration within 60 days after receiving notice of the denial. The reconsideration decision is also made by the DDS. Additional evidence may be submitted by the claimant or requested by the DDS. The reconsideration decision process is similar to the initial disability decision process except that, after the district office updates the claimant's file, a different DDS team reviews the claim. If denied again, the claimant is given notice and advised of further appeal rights.

### 3. Hearing Before an Administrative Law Judge

If the DDS reconsideration team upholds the initial denial, the claimant may request a formal hearing before an administrative law judge in the SSA Office of Hearings and Appeals (OHA). The claimant must file a request for the hearing within 60 days after receiving notice of the reconsideration determination. These requests are forwarded to one of SSA's hearing offices located across the nation and are assigned to individual ALJs. Hearings are held as soon after the request as possible.

The ALJ is an experienced attorney who has received training in adjudicating disability claims. The ALJ is responsible for perfecting the evidentiary record, holding face-to-face nonadversary hearings, and issuing decisions. At the hearing, the claimant appears for the first time before a decisionmaker. Testimony is taken under oath and recorded verbatim. The ALJ may request the appearance of medical and vocational experts at the hearing and can require claimants to undergo consultative medical examinations. Claimants may submit additional evidence, produce witnesses, and be represented by legal counsel or lay persons. The hearing is nonadversarial whether or not the claimant is represented. There is no charge for requesting a hearing.

### 4. Appeals Council Review

Following an ALJs decision to deny a claim, the claimant may, within 60 days after receiving notice, request the Appeals Council to review the decision. The Appeals Council is a 15-member body located in the Office of Hearings and Appeals. The Appeals Council may deny or grant a request for review of an ALJ's action. If the Council agrees to review, it may uphold or change the ALJ's action or it may remand the case to an ALJ for further consideration. It may also review any ALJ action on its own motion within 60 days after the date of the ALJ's action.

### 5. Federal District Court

The Appeals Council review represents the Secretary's final decision and is the claimant's last administrative remedy. If the Council affirms the denial of benefits or refuses to review the claim, further appeal may only be made through the Federal district courts.

## D. Adjudicative Standards, Instructions, and Procedures

In adjudicating disability claims, the DDSs, the ALJs, and the Appeals Council are all governed by the provisions of the Social Security Act, the regulations that have been published in the Code of Federal Regulations, the Social Security Rulings, and decisions of the Supreme Court. Social Security Rulings amplify SSA's policies and provide interpretations of the Act and regulations. Rulings are based on case decisions, program policy statements, decisions of the administrative law judges and the Appeals Council, opinions of the Secretary's Office of the General Counsel, Social Security Commissioner's decision, Federal court decisions, and other interpretations of the law and regulations. The Rulings are used to make precedential decisions available to adjudicators and the public. Like the regulations, they are binding on all adjudicators.

In order to explain and further clarify the provisions of the law, regulations, and rulings, SSA issues to the DDSs a detailed set of administrative instructions known as the Program Operating Manual System (POMS). These guidelines are an amplification of, and are consistent with, the law, regulations, and rulings. The POMS sets forth the objectives and requirements of the disability programs and furnishes specific standards and procedures with which the DDS must comply in reaching a disability determination. These administrative instructions have been developed to ensure the uniformity of DDS and SSA operations and include, for example, standards for developing and evaluating disability evidence. The DDSs, but not the ALJs, are required to use the POMS in making disability determinations. The result has been that in certain policy areas the two adjudicative levels operate with different standards.

SSA also supplements the POMS by supplying the DDS with an Informational Digest. The Digest contains a collection of discussions and resolutions of questions concerning various disability policy and procedural statements. Although it is not to be cited as authority or as a basis for adjudicating claims, the Digest is designed to provide more detailed discussion of the meaning and intended application of disability program provisions.

While the POMS contains the standards used by the DDSs in adjudicating disability claims, it does not have the force or effect of law, as do the regulations. Therefore, in reaching a decision of a claim, an ALJ is not bound by the administrative instructions and guidelines that SSA issues in the POMS to the DDS. Instead, ALJs rely on the law and SSA's regulations and rulings in making disability decisions.

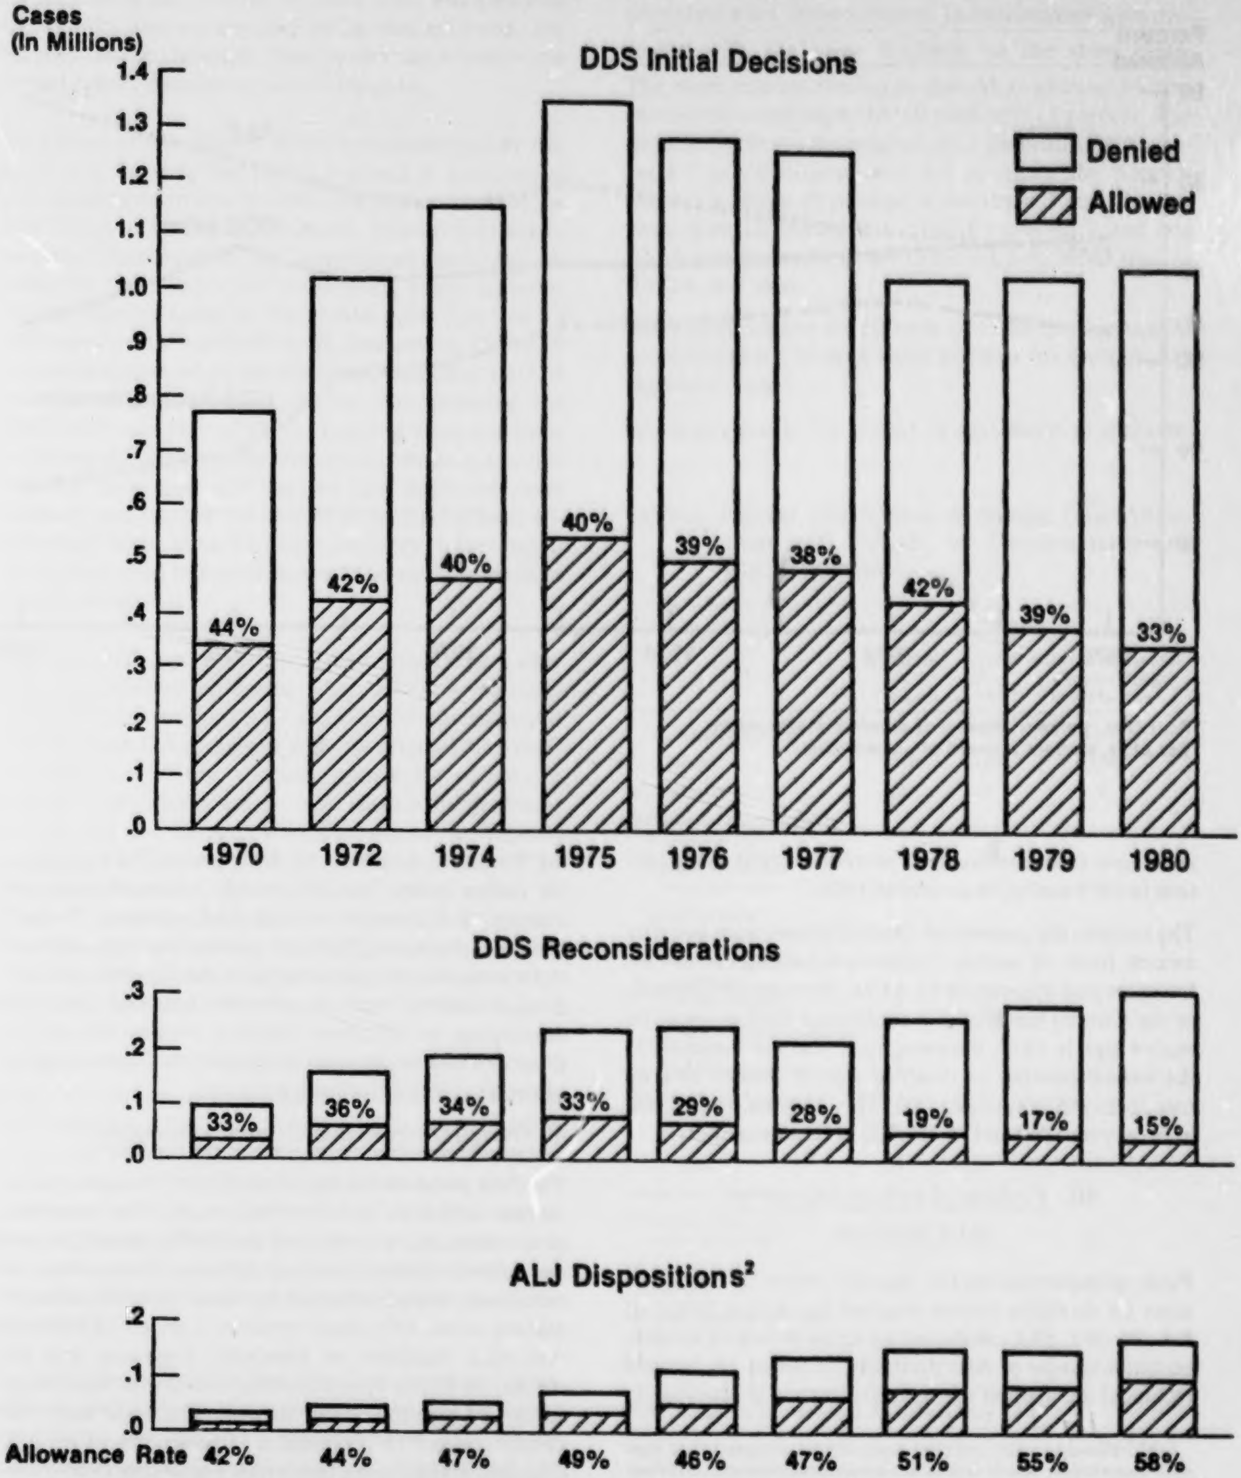
## E. Trend Data on Disability Insurance Decisions and Allowance Rates

During the early and mid-1970's the volume of Disability Insurance claims rose sharply. The number of initial disability decisions increased from about 800,000 in 1970 to about 1,350,000 in 1977. During the period 1978–80, initial decisions were stable at just over 1,000,000 per year, somewhat lower than the level of the mid-1970's but above the level experienced in 1970. Between 1970 and 1978, DDSs allowed around 40 percent of the initial claims they received and denied around 60 percent. However, beginning in 1979 the DDS allowance rate declined substantially, to about 37 percent in 1979 and 33 percent in 1980. The trends in volume and outcome of both DDS and ALJ decisions are shown in Charts 1 and 2.

The greater volume of initial Disability Insurance claims and higher denial rate at the initial level has been accompanied by an increase in the volume of reconsideration requests at the State agency level. In 1970, DDSs made just under 100,000 reconsideration determinations. The number rose to over 200,000 in 1975 and was about 300,000 in fiscal year 1980. Between 1970 and 1975, the DDSs allowed at reconsideration roughly one-third of the claimants who had appealed the initial decision. This reconsideration allowance rate declined somewhat in 1976 and 1977 and it has declined again in the years since 1978. In 1980 only 15 percent of the reconsideration requests resulted in allowance of the claims.

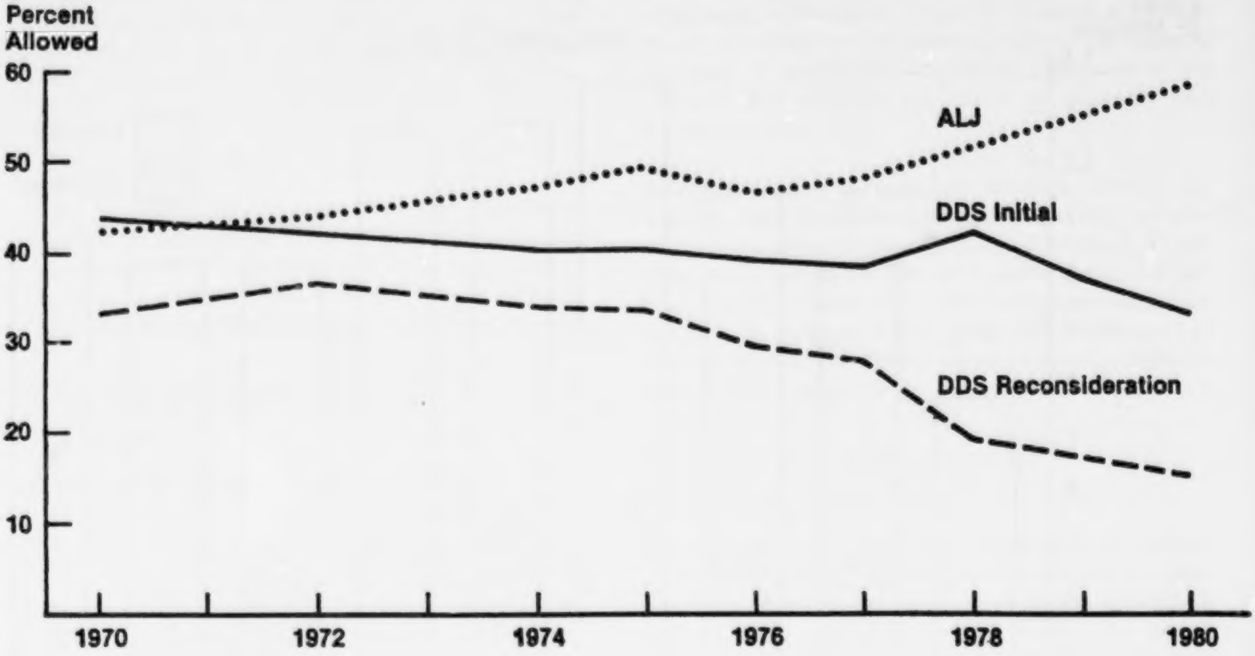
Over the past decade there was a sharp increase in the number of denied applicants requesting a hearing before an ALJ. The number of ALJ dispositions rose from about 34,000 in fiscal year 1970 to about 75,000 in 1975 and then to 172,000 in 1980. During this period the ALJ

**Chart 1. — Number of Disability Insurance Determinations[1] and Number Allowed by DDSs and ALJs, 1970-1980**



[1] Includes DI/SSI concurrent claims but excludes claims which are solely for SSI disability benefits.
[2] Cases not allowed include denials, dismissals and remands to the DDS.

Chart 2. — Disability Insurance Allowance Rate* for DDSs and ALJs, 1970 — 1980



*For DDSs, percent allowed of determinations made.
For ALJs, percent allowed of dispositions.

allowance rate rose from 42 percent in 1970 to 49 percent in 1975 and to 58 percent in 1980.[1]

The trend in the number of Disability Insurance benefits awards from all sources (initial and reconsideration allowances and allowances by ALJs, the Appeals Council, or the Courts) has shown a continuing decline since the record high in 1975. Between fiscal year 1971 and 1975, the annual number of disabled worker benefit awards rose from 406,000 to 603,000. This dropped to 392,000 in fiscal year 1980 and to 358,000 in fiscal year 1981.

## III. Findings of an Initial Review of ALJ Decisions

Prior to implementing the ongoing review of ALJ decisions on disability claims required by section 304(g) of P.L. 96-265, SSA conducted an initial review of a representative sample of ALJ disability decisions. (A detailed technical description of the initial review is provided in the Technical Appendix to this report.) The purpose of the initial review was to provide information on the sources of differences among ALJ, Appeals Council, and DDS decisions. This information was intended both to serve as the basis for a report to the Congress on own-motion review, and to provide base-line data for developing an effective, ongoing own-motion review program and improving the consistency and accuracy of the disability adjudicative process.

### A. Overall Differences in Disability Decisions

The first phase of the initial review was designed to determine whether, and to what extent, the standards, procedures, and practices of the DDSs, the ALJs, and the Appeals Council produce different results when the same cases are adjudicated by these different decision-making units. This phase involved a review of 3,600 recent ALJ decisions on Disability Insurance and SSI claims, of which approximately two-thirds were allowances and one-third were denials. The cases were randomly selected to represent a cross-section of all ALJ decisions made during the period September 1980–January 1981. The case files were reviewed by two different units within SSA: the Office of Assessment (OA), which operated under the rules governing the DDSs; and the Appeals Council, which applied the standards governing ALJ decisions. Neither of these units was aware of the ALJ decision on any case which they reviewed, nor did they see the claimant. Their review did not alter the formal agency decision on any of the cases.

---

[1] ALJ allowance rates represent cases allowed as a percent of total ALJ dispositions, which include dismissals and remands. When allowance rates are expressed as a percent of total ALJ decisions, excluding dismissals and remands, they are higher (e.g., around 62 percent in 1980).

The Office of Assessment review was conducted by disability examiners in that office, working in conjunction with physicians on the Medical Consultant Staff in the SSA Office of Disability Programs. This team of examiners and physicians, in most respects similar to the adjudicative team employed in the DDS, made decisions on each case by applying the POMS guidelines that all DDS agencies are required to use. Because the Office of Assessment, assisted by the Medical Consultant Staff, is the SSA organization responsible for assessing the quality and accuracy of DDS disability determinations on an ongoing basis in the Disability Insurance and SSI disability programs, and because they apply the same standards and procedures employed by the DDSs in adjudicating cases, their decisions on cases in this initial review were used to represent the "correct" application of DDS standards.

After the Office of Assessment determined that a case should be allowed or denied, that decision was compared with the original ALJ decision on the case. All cases in which OA disagreed with the original ALJ decision were sent to the Appeals Council for review. In addition, 300 cases in which there was no disagreement between OA and the ALJ were also sent to the Appeals Council. This procedure was designed to prevent any inadvertent bias in the Appeals Council review and to insure statistical comparability with the original sample. Because of the mixture of cases being sent to it, the Appeals Council was not aware of either the original ALJ decision or the OA decision on a case it was reviewing.

The Appeals Council conducted a de novo review of each case sent to it, applying the standards governing ALJ decisions. The Council reached a decision to allow or deny on each of the 2,183 cases it reviewed. Since the Appeals Council employs the same standards as those governing the ALJs and is the Secretary's final review authority on all disability decisions, its decision on a case was used to represent the "correct" application of the standards and procedures under which ALJs adjudicate claims.

This first phase of the review, therefore, produced three different decisions on the same cases: the OA decision, representing the "correct" application of DDS standards; the Appeals Council decision, representing the "correct" application of ALJ standards; and the original ALJ decision itself. The major finding—which dominates both this and other portions of the review—was that significant differences in decision results were produced when these different decisionmakers were presented with the same evidence on the same cases. The most striking finding is that ALJs allowed 64 percent of the cases while OA allowed only 13 percent. The disparity between the original ALJ decision and the Appeals Council decision was not as great: the Appeals Council allowed 48 percent of the cases. Thus, the Appeals Council occupied a "middle ground," but one which was markedly closer to the ALJ decisions than to the OA decisions.

The allowance and denial rates of these three groups of decisionmakers, broken down by basis for decision, are shown in Table 1.

A comparison of the extent of agreement or disagree-

Table 1. Percent Distribution of Sample Case Allowances and Denials, by Decisionmaker and Basis for Decision[1]

| | Original ALJ Decision | Appeals Council Decision | Office of Assessment Decision Using DDS Standards |
|---|---|---|---|
| ALLOWANCES | | | |
| Total | 64% | 48% | 13% |
| Medical alone | 18 | 15 | 6 |
| Medical/Vocational inability to engage in SGA: | | | |
| Directed by medical-vocational rule | 14 | 11 | 5 |
| Specific reasons: | | | |
| RFC less than sedentary | 18 | 9 | 0 |
| Pain combined with significant impairment(s) | 5 | 3 | 0 |
| Mental disorders combined with significant physical impairment(s) | 5 | 4 | (2) |
| Other medical/vocational | 5 | 6 | 2 |
| DENIALS | | | |
| Total | 36 | 52 | 87 |
| Impairment not severe | 11 | 16 | 39 |
| Impairment does not prohibit past work | 9 | 13 | 28 |
| Directed by medical-vocational rule | 13 | 19 | 13 |
| Impairment does not prohibit other work | 1 | 2 | 4 |
| Other | 2 | 3 | 3 |

NOTE: Detail may not add to totals due to rounding.

[1] Percentages shown are for the combined total of DI and SSI claims. Although there are some differences between the allowance/denial rates for DI claims and SSI claims (e.g., the Appeals Council would have allowed about 49% of DI claims and 45% of SSI claims), these differences do not appear to be significant and do not affect the findings of the review.

[2] About 0.4%.

ment on individual cases reveals even greater differences among the decisionmakers. The original ALJ allowance rate was 64 percent and the Appeals Council allowance rate was 48 percent. This does not mean, however, that the Appeals Council simply denied all the cases which the ALJs denied and, in addition, denied a proportion of the cases which the ALJs allowed. Had this been the case, the Appeals Council allowance rate of 48 percent would have resulted from denying about one-quarter of the ALJ allowances. What actually happened, as shown in Table 2, is that the Appeals Council denied 37 percent of the cases which ALJs allowed and allowed 21 percent of the cases which ALJs denied. Conversely, the Council agreed with the original ALJ decision to allow in only 63 percent of the cases, and agreed with the ALJ decision to deny in 79 percent of the cases. The Office of Assessment decisions on ALJ (Table 2) and Appeals Council (Table 3) denials reflect much greater agreement. Nonetheless, OA would have allowed 4 percent of the cases which the ALJs denied and 7 percent of the cases which the Appeals Council would have denied.

Table 2. Tabulation of Appeals Council and Office of Assessment Decisions by Type of ALJ Decision

| Decision of Reviewers | ALJ Allowances | ALJ Denials | All Cases |
|---|---|---|---|
| Appeals Council | | | |
| Allow | 63% | 21% | 48% |
| Deny | 37 | 79 | 52 |
| Office of Assessment | | | |
| Allow | 18 | 4 | 13 |
| Deny | 82 | 96 | 87 |

A similar comparison of OA decisions on cases allowed and denied by the Appeals Council is shown in Table 3.

Table 3. Office of Assessment Decisions on Appeals Council Decisions to Allow or Deny (Appeals Council Subsample)[1]

| Office of Assessment Decision | Appeals Council Allowances | Appeals Council Denials | All Cases[1] |
|---|---|---|---|
| Allow | 22% | 7% | 14% |
| Deny | 78 | 93 | 86 |

[1] Totals differ slightly from those shown in Tables 1 and 2 because Tables 1 and 2 are based on full sample while Table 3 is based on smaller Appeals Council subsample.

## B. Explanation of Differences

From the data presently available, there is no way to account precisely for all the causes of the differences or their relative importance. Based on what we know about the disability program and what the initial review data tell us, it is clear, however, that there is more than one cause. The initial review was structured to identify significant reasons for the differences, although it cannot establish conclusively all the various contributing factors. In the sections that follow we will discuss some of these possible causes, explain each, and review the evidence available.

### 1. Differences in Standards and Procedures

SSA has long recognized that the standards and procedures governing decisions by DDSs and ALJs are not entirely consistent. Where inconsistencies exist, they are, at least in part, an outgrowth of two somewhat different systems of adjudication. The rules governing DDSs, on the one hand, have developed over time as detailed instructions governing an administrative system. This system is not an independent adjudicative body, and the decisionmaker has no direct face-to-face contact with the claimant. The standards and procedures followed by ALJs, on the other hand, to some degree reflect the status of the ALJ as an adjudicator having decisional independence, conducting hearings in a quasi-judicial setting involving face-to-face contact with claimants, their representatives, and expert witnesses, and taking cognizance of rulings of the U.S. District and Circuit Courts on individual disability claims.

The ALJs are governed by the law, program regulations, and Social Security Rulings. Guidance is also provided by various handbooks issued by the Social Security Administration. The DDSs must follow the POMS, which amplify the basic standards contained in the law and regulations, and are also governed by policy interpretations contained in the SSA Rulings. A review of the standards and procedures governing the ALJs and the DDSs indicates that there are distinct differences in certain key areas. These differences are of several kinds. In certain instances, as for example the definition of "impairment not severe," the actual definition contained in the standards governing the ALJs and the DDSs is not precisely the same. In other instances, ALJ practices result in findings that are not possible under the DDS standards. Finally, in some areas the definitions contained in the standards may be the same—the Medical Listings are the primary case in point—but the procedures actually used for evaluating evidence to determine whether or not an individual's impairment meets the definitions are often quite different. Major areas in which the DDS and ALJ standards and procedures differ are discussed below.

### a. Medical Definitions and Evidence

The first step in adjudicating a disability claim, provided the claimant is not working, is to determine the individual's medical condition. If the individual's impairment is found to be medically "not severe," the claim is denied. Conversely, if the individual meets or equals the Medical Listings, the claim is allowed, since the impairments listed are considered severe enough to prevent any substantial work (substantial gainful activity). If either of these two sets of medical criteria are met, no further development of the claim is required. Our evaluation of the review data revealed the following pattern of decisions based on medical evidence alone.

Table 4. Decisions Based Solely on Medical Evidence (Percentage of All Decisions)

| | Original ALJ Decision | Appeals Council Decision | Office of Assessment (DDS) Decision |
|---|---|---|---|
| Allowance—Meets or Equals Medical Listings | 18% | 15% | 6% |
| Denial—Impairment Not Severe | 11 | 16 | 39 |
| TOTAL | 29 | 31 | 45 |

Table 4 illustrates that the Office of Assessment made substantially more decisions based on medical evidence alone than did the ALJs or the Appeals Council, and that the OA interpretation of the medical evidence was much different, particularly with regard to a finding of "impairment not severe." Although there may be a variety of factors which influence these outcomes, we believe that two are particularly significant.

First, there appear to be differences in the operational definitions of "impairment not severe" which are applied by the two sets of decisionmakers. The regulatory definition used by the ALJs and Appeals Council is:

> A condition which does not "significantly limit your physical or mental ability to do basic work activities . . . ."

The POMS guidelines used by the DDSs and OA are more inclusive:

> "When there is no significant limitation in the ability to perform these basic work related functions, an impairment will not be considered to be severe even though it may prevent the individual from doing a highly selective group of jobs, including work that the individual has done in the past."

Judging from the review data, these two standards, as they are interpreted by the adjudicators, result in widely different findings based on the same evidence. Because the standards, while different, are not widely divergent, the disparities in decisions reflected in the review data would suggest that the views of and procedures used by the different adjudicative bodies in applying the standards are not the same.

Second, although the Medical Listings used by all adjudicators are the same, the evaluation of medical evidence can be quite different. Under the POMS procedures applicable to the DDSs and OA, a physician in the employ of the government must review objective medical findings supplied by a claimant's treating physician or other medical source and make an independent judgment as to whether or not these objective findings indicate that the claimant does not have a severe impairment or is medically disabled. The findings of the government physician, who is trained in the application of the medical criteria used in the disability program, provide the medical basis for disability determinations made by the DDSs and OA. These findings are not supposed to be influenced by a treating physician's conclusions that a claimant is "disabled" or "unable to work."

In contrast, it appears that many ALJs give considerable evidentiary weight to a conclusion reached by a claimant's treating physician or a consulting physician that the individual is medically disabled. This practice may be due, in part, to the fact that ALJs are lawyers, not physicians, and are therefore reluctant to reach an independent medical conclusion (despite the fact that program regulations specify that medical determinations should be based on the adjudicator's review of medical findings and other medical evidence). This practice may also be influenced by the approach required to be taken by the Federal courts. The courts apply a "substantial evidence" rule, under which the conclusion of a physician who has examined the claimant will generally be accorded more weight than the conclusion of a government physician who has only reviewed the paper record, provided that the examining physician's conclusion is supported by substantiating medical data.

Thus, in assessing medical evidence provided by treating or consulting physicians, the DDS and OA will give primary weight to objective evidence and only limited weight to any conclusions as to disability made by the medical source, relying instead on the government physician's conclusions. The conclusions of the treating physician, on the other hand, are often given significant evidentiary weight by the ALJ.

### b. Ability or Inability to Engage in Substantial Gainful Activity

If an individual's disability claim cannot be allowed or denied based on medical factors alone, the DDS must go further to determine whether or not a combination of medical and vocational factors prevent the claimant from engaging in substantial gainful activity. A finding of inability to engage in SGA results in an allowance; ability to engage in SGA results in a denial.

The first step in cases of this type is to perform an assessment of the claimant's residual functional capacity—his or her ability to perform a variety of work-related activities. (The RFC determination is basically a medical determination, subject to the same difference in procedures between DDSs and ALJs cited earlier.) A determination is then made as to whether or not the RFC will permit the individual to perform work done in the past. Ability to do past work results in a denial.

If past work cannot be performed, the adjudicator is required to make a medical-vocational determination as to whether or not the claimant can perform other work in the economy. This is usually done through application of medical-vocational rules which take into account residual functional capacity and the vocational factors of age, education, and previous work. When an individual's impairments are entirely of an exertional nature—limitations in meeting the strength requirements of jobs—the medical-vocational rules generally direct a determination as to whether or not an individual is able to engage in SGA. When the impairments are both exertional and nonexertional (e.g., physical limitations combined with sensory impairments), the medical-vocational rules are first used to determine whether an individual is precluded from engaging in SGA based on exertional impairments alone. If not, the rules are then used by the adjudicator only as a "framework" for determining whether or not the combination of exertional and nonexertional impairments is disabling. They do not direct a finding of disabled or not disabled.

The regulatory standards governing the DDSs and the ALJs provide for this same basic determination process. ALJ practice also permits a determination of inability to engage in SGA if the individual:

(1) has a residual functional capacity less than sedentary (i.e., the individual cannot perform even sedentary work);
(2) suffers from severe pain which, combined with significant impairment(s), precludes performance of SGA; or
(3) suffers from a nonsevere mental disorder which, combined with significant physical impairment(s), precludes performance of SGA.

These three categories either do not exist, or are used infrequently, in the DDS determination process. The first two categories are not provided for in regulations or in the POMS, and are not used at all by the DDSs. Under the DDS standards, the category "RFC less than sedentary" is nonexistent; to have less than sedentary residual functional capacity means that an individual has impairments which should meet or equal the Medical Listings. The DDSs do consider pain in making a medical-vocational determination. The regulations require that they treat pain as a symptom associated with certain physical impairments, not as an impairment itself, and take it into account when determining residual functional capacity. Thus, pain could be a factor in a determination of disability made by the DDSs using the medical-vocational rules, but would not be a basis for a separate finding of disability under a special "pain" category.

Finally, although the third category—the combination of mental disorders with significant physical impairments—is provided for in the regulations and can appropriately be used by the DDSs, its use in making a medical-vocational allowance appears to be infrequent. (Of course, if the combination of impairments is sufficiently severe, it will result in a medical allowance based on equaling the Medical Listings.) A medical-vocational finding of disability resulting from this combination of exertional and nonexertional impairments is judgmental, not one which is directed by the medical-vocational rules.

These three categories are, however, used extensively by ALJs and the Appeals Council. This is clearly shown in Table 1, where the initial review data indicate that 28 percent of the ALJ cases and 16 percent of the Appeals Council cases were allowed based on a finding that an individual could not engage in SGA due to one of these three causes. The preponderance of such allowances by both sets of decisionmakers was based on a finding of "RFC less than sedentary." In contrast, the Office of Assessment, applying the DDS standards, made no allowances in the "RFC less than sedentary" and "pain" categories, and allowed only 0.4 percent of the cases under the third, or "mental," category. Although pain or mental illness may have been a factor in some OA allowances recorded under other categories in Table 1 (e.g., the "Other medical/vocational" category generally used by OA when a decision was not directed by the medical-vocational rules), the overall OA allowance rate of 13 percent suggests that pain and mental illness could have not been significant factors—particularly when compared with an ALJ allowance rate of 10 percent and an Appeals Council rate of 7 percent in these categories.

It should be noted that eliminating the ALJ practice of using the first two categories would not necessarily convert allowances under these categories to denials. A preliminary and informal study by the SSA Office of Hearings and Appeals has indicated that most of the claims allowed on the basis of "RFC less than sedentary" might be allowed under other categories. In any event, we cannot say with any certainty what the effect of elimination of the categories would be.

The data in Table 1 also appear to indicate that the evaluation of residual functional capacity, as it applies to a claimant's ability or inability to do past work, is viewed quite differently by the various adjudicatory authorities. The ALJs denied claims on the basis of ability to do past work in 9 percent of the cases, and the Appeals Council denied in 13 percent. The Office of Assessment denial rate, 28 percent, was 2 to 3 times higher. There is no clear explanation for this difference, but it may be related to such factors as the differences in treatment of medical evidence used to determine an individual's RFC, and differences in the findings of vocational experts available to or used by the adjudicators.

In summary, an evaluation of the standards and procedures governing the ALJs and DDSs suggests that variations in definitions and procedures may well be an important cause of the difference in findings, based on the same evidence, observed in the data from the initial review shown in Table 1. It is important to note, however, that differences in allowance and denial rates among the various adjudicators are not solely a product of differences in standards and procedures.

## 2. Inconsistencies in the Application of Standards

The initial review indicates that, even when decisionmakers are supposed to be applying the same standards, they are not applying them consistently. Data presented in Tables 1 and 2 show that ALJs and the Appeals Council arrive at different conclusions when reviewing the same cases, even though they are using the same standards. In the aggregate, the Appeals Council would have allowed significantly fewer cases than ALJs.

In addition to studying overall allowance and denial rates, the initial review attempted to measure the consistency of decisionmaking among ALJs. The SSA corps of ALJs was divided into three groups of approximately equal size. Each group was composed of ALJs whose overall allowance rate fell within a given range. The sample of ALJ decisions selected for the first phase of the review was structured so that about one-third of the cases came from each group of ALJs. The three groups of ALJs, classified by their allowance rate levels, were:

| ALJ Allowance Rate Group | ALJ Allowance Percentage | ALJ Median Allowance Rate |
|---|---|---|
| Low Allowance Rate | 0-55% | 47% |
| Medium Allowance Rate | 56-70% | 63% |
| High Allowance Rate | 71-100% | 77% |

The initial review was not designed to take into account all of the factors that might account for differences in ALJ allowance rates (e.g., the possibility of significant differences in the types of cases assigned to high or low allowance ALJs, or differences in attorney representation of claimants among the three ALJ strata). Initial evaluation of the data, however, suggests that while it is possible that some biases exist, they would not be significant enough to alter the nature of the results found when the original ALJ allowance rates are compared with the Appeals Council rates for the three groups of ALJs. These results are shown in Table 5.

Table 5 shows that the Appeals Council allowed roughly 50 percent (ranging from 46-51 percent) of

Table 5. Appeals Council Allowance Rate for ALJ Groups with Low, Medium, and High Allowance Characteristics (Appeals Council Subsample)

| ALJ Allowance Rate Group | Original ALJ Decision on Sample Cases (1) | | Appeals Council Allowances: Percent of ALJ Decisions Allowed (2) | | Appeals Council Allowances: Appeals Council Allowance Rate (3) |
|---|---|---|---|---|---|
| | (1) | × | (2) | = | (3) |
| Low Allowance Rate Group | | | | | |
| Allow | 50% | | 70% | | 35% |
| Deny | 50 | | 24 | | 12 |
| Total | | | | | 47 |
| Medium Allowance Rate Group | | | | | |
| Allow | 65 | | 68 | | 44 |
| Deny | 35 | | 19 | | 7 |
| Total | | | | | 51 |
| High Allowance Rate Group | | | | | |
| Allow | 81 | | 52 | | 43 |
| Deny | 19 | | 17 | | 3 |
| Total | | | | | 46 |
| Total, All ALJs | | | | | |
| Allow | 64 | | 63 | | 40 |
| Deny | 36 | | 21 | | 8 |
| Total | | | | | 48 |

the cases from each of the three groups of ALJs. This relatively consistent Appeals Council allowance rate across the groups does not follow the pattern of high, medium, and low allowance rates that characterize the groups, and suggests that there are not major variations in the characteristics of cases decided by each group. The Appeals Council allowance rates for cases that the low and medium allowance rate ALJs originally allowed were consistent: 70 and 68 percent, respectively. However, the Appeals Council allowance rate for cases originally allowed by ALJs with high allowance rates dropped to 52 percent.

If the Appeals Council decision is taken as the "correct" decision under the standards and procedures governing ALJs, these findings would indicate that decisions to allow cases by ALJs with high allowance rates are more often "incorrect" than the decisions of ALJs with medium and low allowance rates. By the same token, no significant difference is found in Appeals Council decisions on cases originally decided by the ALJ groups with medium and low allowance rates. These two groups appear to be relatively homogeneous, using Appeals Council decisions as the criterion. This clearly suggests that the ongoing, own-motion review mandated by P.L. 96-265 should place the most emphasis on a review of cases decided by ALJs with high allowance rates.

The initial review also indicates that a more subtle form of inconsistency, or subjectivity, exists in disability decisions. Its essence is that while two different decisionmakers or sets of decisionmakers may often make the same decision to allow or deny a particular case, their reasons for making that decision and their view of the evidence on which the decision is based may be quite different. When the Appeals Council reviewed the ALJ decisions in the initial review, they allowed 63 percent of the cases which the ALJs allowed and denied 79 percent of the cases which the ALJs denied (see Table 2). A detailed examination of the cases on which both groups agreed, however, shows that the Council agreed with the ALJs as to the basis for an allowance or denial much less frequently than it agreed on whether the case should be allowed or denied. The Council agreed that a case should be allowed because the claimant met or equaled the Medical Listings in 41 percent of the cases that the ALJs allowed on this basis, and agreed with an ALJ allowance based on vocational rules in 38 percent of the cases. The rate of agreement on the basis for allowance due to all other allowance criteria was significantly lower. The same phenomenon is observed, although to a lesser degree, in those cases which both the ALJ and the Appeals Council denied.

In short, although there was a fair amount of agreement as to whether a case should be allowed or denied according to the standards governing ALJs, there was significantly less agreement on the basis for reaching that decision. It seems obvious that when these kinds of variations occur in decisions on cases in which the decisionmakers agree upon the outcome, there is a considerable degree of latitude for the individual judgments of different decisionmakers to produce a different outcome on the same case. Although it may be possible by various means to lessen inconsistency in the determination process, one cannot necessarily expect that two different decisionmakers or decisionmaking levels operating under the same rules and procedures will uniformly produce the same decision results on the same cases.

### 3. Subjectivity, Organizational Trends, and Management Emphases

SSA has long recognized that determining whether an individual is capable of engaging in substantial gainful activity—the basic measure of whether or not one is disabled under the law—is a complex process. By its very nature, the process involves some degree of subjective judgment by the adjudicator, especially in cases where the claimant's condition is near the border that divides the disabled person from one who is not disabled. The data presented in the previous section concerning inconsistency in decisionmaking are, to some degree, indicative of this subjective element.

There are indicators that the subjective element in the disability determination process, in combination with other factors, may result in distinct differences and trends in disability decisions made at different organizational levels. These differences seem to reflect organizational bias and change, as opposed to random inconsistency in the application of standards by individual disability decisionmakers.

When we review the Disability Insurance program allowance and denial data for the past 10 years, we find definite trends or changes which seem to be unaccounted for by any significant changes in the standards which govern the separate adjudicative bodies, or in the characteristics of the applicant population. As shown in the preceding chapter (Charts 1 and 2), allowance rates at the various decisional levels were relatively stable during the period 1970–77. DDSs allowed about 40 percent of initial Disability Insurance claims and 33 percent of reconsideration appeals. The allowance rate for ALJs hovered in the 45 percent range, varying from a low of 42 percent in 1970 to a high of 49 percent in 1975. This picture began to change dramatically in the latter part of the 1970's, however, as the DDS allowance rate started to decline. By fiscal year 1980 the DDS allowance rate on initial claims had dropped to 33 percent, and on reconsideration appeals to 15 percent.

The reconsideration claims volume and allowance rates are particularly worth noting, since a denial at reconsideration is the necessary precursor to an appeal for an ALJ hearing. The volume of reconsiderations in the latter part of the 1970's has been double or triple the volume in the first half of the decade, and continues to increase. At the same time, the allowance rate on reconsiderations, which was 33 percent in 1975, has steadily declined in subsequent years. It presently stands at less than half of the 1975 rate. What may very well be a reciprocal change has occurred in the ALJ allowance rates during the last few years. From an allowance rate level of 47 percent in 1977, the ALJ rate climbed to 51 percent in 1978, 55 percent in 1979, and 58 percent in 1980.

We cannot definitively establish why these trends occur or whether the trends in ALJ allowance rates were the result of changes in the DDS allowance pattern. There is no question, however, that a primary focus of the Social Security Administration in recent years has been to tighten administration of the disability program at the DDS level to attempt to minimize subjectivity and ensure that only those who were severely disabled were awarded benefits. This tightening was a reasonable and necessary response to the experience of the early and mid-1970's, when the combination of high application and allowance rates caused program costs to quadruple. Various management processes—more explicit instructions, requirements for better documentation, increased physician participation in adjudication and review, greatly strengthened quality control—were used to accomplish this change. As a result, it is likely that a more stringent application of the subjective adjudicative standards has been in evidence in the last few years.

This hypothesis cannot be conclusively proven, but the trends in disability applications and DDS allowance rates, our knowledge of recent program and administrative emphases, quality assurance data, and anecdotal information from the DDSs all lend it credence. If one accepts this hypothesis, then it seems reasonable to assume that, within a limited range, the outcome of a disability determination may be a product of the general policies under which the adjudicator is operating and the nature and extent of quality control and other management procedures applied in the organization to reduce subjectivity and promote consistent interpretations of agency policy.

Carrying the hypothesis a step further, if steps to significantly tighten administration and quality review at the DDS level result in a higher percentage of reconsideration denials, this should have some effect at the hearings level. If ALJ behavior did not change appreciably when these denials were appealed to the hearings level—i.e., if individual ALJs continued to allow the same kinds of cases they previously had allowed—the overall ALJ allowance rate would increase. This is, in fact, what the data show. This is also consistent with the observation that, in recent years, the forces at work to tighten administration at the DDS level were largely absent at the ALJ level. While considerable attention was focused on increasing the production rate of ALJs, mechanisms such as an effective own-motion review designed to reverse incorrect decisions by ALJs were essentially absent.

The essential points are that a degree of subjectivity exists in the disability determination process, and that one of its manifestations may be different decisional behavior at different organizational levels. Available evidence at least suggests that this behavior, as reflected in historic trends, is influenced by the mind set of the various SSA adjudicatory organizations, the general policy and management framework in which they are operating, and the controls over decisional quality which are applied in the organizations.

### C. Other Findings

As requested by the Congress, the initial review attempted to determine the effect of in-person appearance by the claimant before the ALJ and the effect of additional evidence submitted to the ALJ after the DDS reconsideration decision.

#### 1. Effect of In-Person Appearance

The ALJ hearing is the first time an applicant appears before the person who decides his case. The second phase of the initial review was designed to determine the effect on ALJ decisions of the claimant's in-person appearance. In this phase, a representative subsample of 1,000 cases was selected from the 3,600 cases used in the first phase. For each case, a hard copy transcript of the original ALJ hearing was made and then edited to remove all evidence related to the claimant's in-person appearance at the hearing. Testimony of expert witnesses was retained in the edited transcript.

These 1,000 edited cases were then distributed to a representative sample of 48 ALJs (selected to mirror the allowance rate patterns of the ALJs who originally decided the cases) for a complete redetermination. The resulting decisions were then compared with the original ALJ decisions. Given that only one type of information available to the original ALJ was removed, the difference between the two sets of decisions should be indicative of the effect of the claimant's in-person appearance, absent any biases which might result from the study procedure itself.[1]

The original ALJ allowance rate on this subsample of cases was 63 percent. After removing the evidence relating to the claimant's in-person appearance, the ALJ allowance rate dropped to 46 percent. Thus, the in-person appearance of claimants appears to make a difference in ALJ decisions (subject to the previously noted caveats about a "study effect").

That in-person appearance might make a difference is not surprising. On a number of occasions SSA has experimented with in-person appearance at the DDS reconsideration level. While the specific results of the studies vary and there are certain reservations due to the methodology employed, they do generally show that the allowance rate increases somewhat when the decision process includes a face-to-face appearance by the claimant.

There could be a variety of reasons for this effect. Some of these may be of an objective nature: the decisionmaker can see at first hand the claimant's appearance and functional limitations. A more subjective, emotional effect—human sympathy for an individual who appears to be severely impaired—is probably also present in some cases.

Still another factor which may be of relevance in ALJ determinations is the representation of some claimants by a lawyer or other advocate at the hearing. In FY 1981, 71 percent of claimants were represented at the ALJ hearing. In those cases where representatives were present, the ALJ allowance rate was 61 percent. In contrast, in the 29 percent of cases where claimants were not represented, the allowance rate fell to 48 percent. Data from the first phase of the initial review show a similar pattern. Of those claimants who had a hearing, 68 percent were represented. The ALJ allowance rate for those cases was 64 percent, as opposed to 53 percent for claimants not represented at hearing.

### 2. Effect of Additional Evidence Submitted at Hearing

The third phase of the initial review was designed to determine the effect on ALJ decisions of additional evidence submitted after the DDS reconsideration decision. This phase used all of the 1,000 cases used in the second (in-person appearance) phase. Each case was revised to remove any evidence added after the DDS reconsideration decision. The case folders, stripped of all information gathered in the hearings process, were distributed to another representative group of 48 ALJs for a complete readjudication. The resulting decisions were then compared with the decisions made in the second phase, where only the information related to in-person appearance had been removed. The differences in decisions on these 1,000 cases—adjudicated both with and without post-reconsideration evidence—should be, in the aggregate, attributable to the submission of additional evidence after the reconsideration level.

Table 6 shows that additional evidence made a significant difference in ALJ allowance rates. The overall second phase allowance rate of 46 percent dropped to 31 percent when all additional evidence was removed. A statistical test showed that the difference was due solely to additional medical evidence, which was submitted in 74 percent of the cases. Additional vocational evidence had no impact on allowance rates. Specifically, neither the difference in ALJ allowance rates shown in table 6 for cases without any additional evidence, nor the difference for cases with additional vocational evidence only, was statistically significant. The effect of additional medical evidence is the same with and without additional vocational evidence.

The OA examiners and Medical Consultant Staff also reviewed this subsample of 1,000 cases with and without the additional evidence. The OA allowance rate was 15 percent when all the evidence available to the ALJ was included. It dropped to 12 percent when the additional evidence was deleted.

Table 6. Allowance Rates Distributed by Type of Additional Evidence

| Type of Additional Evidence | Total Cases | ALJ Allowance Rate |  | OA Allowance Rate |  |
|---|---|---|---|---|---|
|  |  | Without New Evidence | With New Evidence | Without New Evidence | With New Evidence |
| None [1] | 20% | 36% | 40% | 10% | 11% |
| Vocational only | 6 | 30 | 25 | 9 | 9 |
| Medical only | 50 | 29 | 49 | 12 | 15 |
| Medical and Vocational | 24 | 30 | 51 | 16 | 19 |
| Total | 100 | 31 | 46 | 12 | 15 |

[1] In this instance, there was no difference between cases "without new evidence" and "with new evidence." As previously noted, the difference in allowance rates (4 percentage points) for the two groups of ALJ reviewers is not statistically significant. Neither is the difference in OA rates.

---

[1] The way the study was designed and conducted could have influenced the results. The original ALJ decision was made with the knowledge that it would affect the benefit rights of the claimant. The second-phase decision, made by the representative sample of ALJs, was made with the knowledge that the decision would not affect benefit rights or benefit amounts. As a result, this decision may have been made more liberally or conservatively than it would have been had "live" claims been involved. This difference in the adjudicative climate in which the two sets of ALJs made their decisions could have introduced a "study effect" which might, at least in part, account for differences in decisional results. SSA is currently analyzing the study data to try to determine the magnitude of this possible study effect.

Table 7 shows that of the sample cases with additional medical evidence, in almost all cases the evidence pertained to a previously alleged medical condition rather than to a new medical condition. The additional evidence concerning prior conditions may have shown a change in the prior condition or provided more extensive documentation of the condition as it existed at the reconsideration level.

Table 7. Percent of Cases Containing Medical Evidence Pertaining to Prior and/or New Condition(s)

| Additional Medical Evidence Pertaining to: | Percent of Cases |
|---|---|
| New condition | 1 |
| Prior condition | 88 |
| Both new and prior condition | 11 |

The relative importance of new evidence to the different disability decisionmakers is worth noting. As observed earlier, there are significant differences in the way ALJs and OA view the same medical evidence. These differences are reflected in the much lower OA allowance rates shown in Table 1. Thus, it is not surprising that OA, working with the Medical Consultant Staff, found that only 12 percent of the cases in this subsample should have been allowed at the reconsideration level, and that the additional evidence submitted after reconsideration should have increased the allowance rate by only 3 percentage points, to 15 percent. Nonetheless, although this increase is small in absolute terms, it does represent a 25 percent increase over the base allowance rate of 12 percent.

The ALJs who reviewed the cases from which all additional evidence had been removed—cases which contained only the information on which the reconsideration decision was based—found that 31 percent should have been allowed at that stage. The ALJ allowance rate after the new evidence was reviewed increased by 15 percentage points, or an increase of 48 percent over the base allowance level. The treatment of additional medical evidence by the ALJs is a dominant factor in this increase. This may be reflective, at least in part, of the greater weight assigned by the ALJs to conclusions drawn by treating or consulting physicians. In any event, the discrepancy between the ALJ and the OA allowance rate for these cases is probably a product of the differences in standards, the inconsistency in the application of standards, and the other causal factors previously discussed.

## IV. The Ongoing Review and Other Initiatives

The initial review indicates significant differences in adjudicatory practices and results between the prehearing and the hearing levels, and to a lesser extent, inconsistencies within the hearing level. SSA is concerned about the implications of these findings and has undertaken, or will undertake, actions in a number of areas to address the identified problems. Generally, SSA initiatives address five areas of concern:

(1) The need to improve the consistency and correctness of ALJ decisions.
(2) The need to ensure that standards governing DDSs and ALJs are consistent and are applied in a consistent manner.
(3) The need to provide improved ALJ training to promote better understanding and more consistent application of agency policy.
(4) The need to ensure complete documentation and consideration of all relevant evidence in a case, and to provide a specific and detailed rationale for the decision reached at the hearing level.
(5) The need to examine and improve other aspects of the disability determination process, particulary at the reconsideration level.

### A. An Ongoing Review

On October 1, 1981, SSA implemented an ongoing program of own-motion review pursuant to section 304(g) of P.L. 96-265. The purpose of the review is to identify decisions which are inconsistent with SSA policy and standards, and to take appropriate action to revise those decisions.

The review is being conducted in the Office of Hearings and Appeals by the Appeals Council, which has the delegated authority to review all ALJ decisions and dismissal actions at the request of the claimant or on its own motion. The review program concentrates primarily on ALJ disability allowances issued for Disability Insurance and concurrent DI/SSI claims. At the outset, based on results of the initial review, a sample of decisions of ALJs and hearing offices with the highest allowance rates is being selected. Cases from these ALJs and hearing offices are being forwarded directly to OHA's central office in Arlington, Virginia, where they undergo preliminary screening and review by staff of the Appeals Council. Where appropriate, referrals are made to the Appeals Council for consideration of own-motion action.

The Appeals Council will exercise its own-motion authority if any one of the following is present:

(1) There is an abuse of discretion by the ALJ;
(2) there is an error of law;
(3) the decision is not supported by substantial evidence; or
(4) there is a broad policy or procedural issue that may affect the general public interest.

Once the Appeals Council decides to review a hearing decision on its own motion, the Council may affirm, reverse, or modify the decision or remand the case to an administrative law judge for further proceedings.

The current review sample is intended to include approximately 7 1/2 percent of total ALJ allowances in DI and DI/SSI concurrent cases. Later in fiscal year 1982, as additional resources can be made available for this effort, the review will be expanded to include additional ALJs and a national random sample of hearing decisions. By the end of FY 1982, we plan to be reviewing a total of 15 percent of ALJ allowance decisions. At present, we do not plan to include ALJ denial decisions in the review, since the Appeals Council will continue to handle those cases in which the claimant requests review of an ALJ decision denying his or her application in whole or in part.

In addition to ALJ decisions selected through a targeted sampling procedure, the review will also include decisions formally referred to OHA by other SSA components. Referrals from these components will be reviewed under what is commonly referred to as the "protest" procedure. Referrals will be made when the decision as to disability is questioned on a substantive issue rather than on a solely technical nondisability issue, as has occurred under past "protest" procedures. Generally, cases previously referred under "protest" have been those which could not be effectuated because of a legal or technical impediment.

Because the ongoing review program was only recently implemented, significant data about the results are not yet available. Nonetheless, SSA believes this program will bring about more accurate and consistent decisions by all administrative law judges. In some cases, the Appeals Council will be taking corrective action itself where an ALJ's decision is determined to be erroneous, based on the record upon which the decision was made. In other instances, the Appeals Council will return the case to an administrative law judge for corrective action, which may include obtaining additional evidence and/or a new or supplemental hearing. In either event, the administrative law judge who issued the original decision will receive specific feedback about the Council's action and the basis for it. Included will be specific instructions for correcting case deficiencies, as well as citations and discussion of relevant regulatory provisions. Apart from this direct feedback to the individual ALJ whose decisions are reviewed under the ongoing program, OHA also intends to use aggregate findings as a basis for advising the entire administrative law judge corps of the areas in which improvement in decision-making and/or documentation is necessary. Information of this type will be made available to all ALJs via instructional and educational material.

### B. Standards Governing Disability Adjudication

As indicated in Chapter III, a major finding of the initial review was that the standards for deciding disability claims are applied differently at the various levels of adjudication. SSA has concluded that a significant contributing factor to this difference is that administrative law judges base their decisions on their own individual interpretations of the statute, applicable regulations, and Social Security Rulings without benefit of the guidance and clarification provided in POMS, which is used by the prehearing level adjudicators. We are persuaded that all adjudicators must be provided, and required to adhere to, a consistent set of adjudicatory standards. Another major finding of the initial review was that there are a number of specific concepts and adjudicatory areas in which agency policy needs to be clarified. The primary examples, based on the study data, are impairment severity, assessment of residual functional capacity, effect of pain on residual functional capacity, and the treatment of mental disorders, both singly and in combination with physical impairments.

SSA is in the process of establishing a consistent set of adjudicatory standards which reflect and provide binding agency policy in adjudicating cases, particularly in the difficult decisional areas noted above. Heretofore, a primary vehicle for disseminating SSA policy and agency interpretations of the regulations and statute has been the POMS. Social Security Rulings, which include Program Policy Statements, have been used primarily to illustrate the application of SSA's policy or interpretation in specific cases and to enunciate the agency's position in major policy areas. The POMS has been used to provide more specific guidance and instruction to all SSA adjudicative personnel except the administrative law judges and the Appeals Council.

SSA now recognizes that the inclusion of more specific instructional material in POMS issuances, which are not binding on ALJs and the Appeals Council, has resulted in adjudicative practices by these two sets of adjudicators which differ in many respects from those followed by the targeted POMS audience, the DDSs. To overcome this problem, SSA intends to expand its use of Program Policy Statements (which become Social Security Rulings) to address policy and adjudicatory areas which we believe are the most troublesome in terms of consistent application. Moreover, appropriate POMS guidelines will be issued in a manner which will make them binding on all levels of adjudication. These guidelines will be disseminated to all levels of adjudication and will represent a single set of standards for all to follow. We expect these efforts to have three major results:

(1) The adjudicatory standards governing DDS and ALJ decisionmaking will be essentially the same.
(2) More detailed and clearer guidance will be provided to all decisionmakers.
(3) Greater consistency, both among the DDSs and among the ALJs, as well as between the several adjudicatory levels, will be achieved.

### C. Training

In recent years, primarily as a result of budgetary and resource constraints, OHA's activity in the area of program training for ALJs and support staff has been quite limited. The major effort was directed toward training of new ALJs and field personnel; however, because of the pressing need to make these resources available for case processing as quickly as possible, the training courses were of relatively brief duration. Similarly, refresher training has not been regular or systematic.

In the past, much of the responsibility for training was vested in OHA's regional offices. To insure that training for field personnel is expanded and improved, OHA has established a special staff in its central office to develop new and expanded training programs for all OHA field personnel. This staff will be developing a more extensive initial training program for new ALJs, an expansion of the continuing judicial education now provided to ALJs, and integrated training packages for ALJ support staff, particularly the staff that assists in case development and decision drafting.

A major focus of the new training process will be the areas of adjudicative differences identified in the initial review. The training will also constitute an additional mechanism for providing feedback to the ALJs regarding deficiencies identified through the ongoing review. Through its training initiatives, OHA expects to promote among ALJs and their support staffs a better understanding and application of both current and revised standards and procedures, resulting in greater consistency and accuracy in decisionmaking.

### D. Other Initiatives at the Hearing Level

Although SSA believes that the major initiatives discussed previously will substantially narrow the differences which exist in the adjudicative approaches used at the prehearing and hearing levels, we are also undertaking other initiatives to address these problems through examination of, and changes in, several key aspects of the hearing level process.

The first of these initiatives to improve decisional quality at the hearing level is the elimination of the short format for fully favorable decisions. Effective January 1982, OHA will begin to discontinue use of preprinted fully favorable allowance decision forms which contain no statement of the basis for the allowance. A revised format has been developed for allowance decisions to ensure not only that they will contain a specific explanation of the reasons for the favorable conclusion, including a discussion of all relevant evidence, but also that they reflect adherence to the sequential evaluation process directed by the regulations. To facilitate use of the new decision form, the format incorporates standardized language with respect to issues, citation of applicable regulations, findings, and decisional paragraphs. It also provides for individualized discussion of and rationale for the conclusion reached. SSA expects that this initiative should eliminate the implicit incentive toward favorable decisions which many critics and observers believe has resulted from use of the short format.

The second initiative directed at improved decisional quality is the planned implementation during fiscal year 1982 of an experiment under which SSA will be a party in certain hearing proceedings. For selected hearing offices, an SSA employee will have responsibility for representing SSA's position during hearings for those claimants who are represented. The purpose of the experiment is to determine whether the participation of an agency representative in hearings could contribute toward improving the quality and timeliness of hearing decisions. SSA expects that the participation of the SSA representative in prehearing development and during the hearing itself will relieve some of the burden on the ALJ corps which has resulted from the large and growing number of hearing requests in recent years. Although the ALJ will in all cases have final responsibility for conducting the hearing and for assuring that a complete record of the case is developed, as well as for the final disposition, the SSA representative will play an active role in obtaining relevant evidence and in explaining to the ALJ and the claimant the basis for the prior unfavorable determination. The experiment will last about 9 months, following which the results will be evaluated to determine whether the quality and timeliness of the hearing process has been improved. The primary concern with respect to the quality of decisions will be whether decisional inconsistency among the ALJs is reduced.

### E. Initiatives to Improve DDS Performance

Both as a result of legislative mandate and of internal SSA initiatives, SSA has undertaken a number of programs and experiments designed to improve the accuracy and consistency of disability decisions made by the DDSs. Two of these activities are particularly worth noting: the program of preeffectuation review of DDS disability allowances required by the Social Security Disability Amendments of 1980 (P.L. 96-265); and the so-called DARE experiments initiated by SSA to test ways in which the DDS reconsideration process might be improved.

The Disability Amendments of 1980 require that SSA conduct a Federal review of certain proportions of favorable Social Security disability decisions made by DDSs before benefit payments begin. This preeffectuation review, in which incorrect decisions made by the DDS are reversed prior to notification of the claimant or payment of any benefits, is intended to promote the uniformity and accuracy of favorable disability decisions. The review applies to decisions made by the DDSs on initial claims, reconsiderations, and continuing disability investigations (reviews of the disability status of individuals currently receiving disability benefits).

SSA began the program of preeffectuation review in October 1980. Reviews were targeted on those types of allowances determined from available data to be most likely to be in error. Where such data were not available, cases were selected on a random basis. Through June 30, 1981, about 17.5 percent of State agency allowances were reviewed by SSA, and about 8.5 percent of the cases reviewed were returned to State agencies, either because the finding of disability was erroneous or because the finding was inadequately documented.

As a result of the initial operation of the preeffectuation review program, it became clear that special attention needed to be devoted to reconsideration cases. Reconsideration allowances had an error rate of 9 percent, as compared to a 3.1 percent error rate on initial DDS allowances. In order to deal with this problem, SSA in fiscal year 1982 initiated preeffectuation review of 100 percent of all allowances made at the reconsideration level. This 100 percent review should improve the accuracy and consistency of DDS reconsideration decisions and, in addition, provide data for more accurately targeting error-prone cases for review in later years.

SSA is also conducting three experiments to determine whether changes in procedures at the reconsideration level would result in different outcomes when cases move on to hearings. These so-called DARE experiments are being conducted in a number of States throughout the country. The experiments test the following changes which might be made in the reconsideration process:

DARE 1—Expanded Reconsideration Process

DARE 1, being conducted by DDSs in two States, tests singly and in combination three changes in the reconsideration process. The first change requires that the DDS secure more complete medical evidence, including a consultative examination when one had not been purchased earlier. The second change requires the DDS to provide a separate statement of residual functional capacity. The third requires that the DDS prepare a lengthy formal notice of the basis for decision. Each of these changes will provide more complete documentation of the basis for the reconsideration decision, and may result in more accurate and consistent decisions.

DARE 2—Informal Remand

DARE 2 is evaluating the effect of the DARE 1 procedures on disability claims which are denied at reconsideration and are then informally remanded to the DDS for further development following the claimant's request for an ALJ hearing. The purpose of DARE 2 is to evaluate the likely effect of these procedures if they are applied only to those cases going to hearing.

DARE 3—Face-to-Face Interviews at Reconsideration

The DARE 3 experiment is evaluating the effect at the reconsideration level of face-to-face contact between the disability applicant and the DDS decisionmaker or SSA district office interviewer. The test will also evaluate the effect of when the interview is held—early or late in the reconsideration process. The experiment is being conducted in four States, and should give an indication of the value and effect upon decisional accuracy of including face-to-face contact between the claimant and the adjudicator prior to a formal ALJ hearing.

SSA believes that the preeffectuation review, in combination with any changes at the reconsideration level which may be found appropriate as a result of the experience with the DARE experiments, will result in more accurate, consistent, and better-documented decisions by the DDSs. These improvements, in turn, should assist in improving decisional accuracy at the hearings level.

In summary, SSA has undertaken a number of activities designed to respond to the problems identified through the initial review. The most significant are probably the ongoing review of ALJ decisions required by P.L. 96-265, and the initiation of changes required to ensure that all SSA disability decisionmakers are governed by the same standards. In addition to enabling SSA to correct erroneous decisions, the ongoing review will provide SSA with the ability to continuously monitor the disability adjudication process to ensure that the problems identified in the initial review are actually corrected and that any additional areas of weakness are identified and acted upon. These actions, in conjunction with the other initiatives discussed in this report, should greatly improve the accuracy and consistency of disability decisions made throughout the SSA adjudicative system.

## Technical Appendix

### I. Overview

As described in the text of the report, the research plan involved an intensive multi-phased review of a randomly selected sample of allowances and denials rendered by administrative law judges (ALJs) on the issue of disability in Title II Disability Insurance (DI) and Title XVI Supplemental Security Income (SSI) claims. This review involved SSA Office of Assessment (OA) examiners, Office of Hearings and Appeals (OHA) analysts, administrative law judges, the OHA Appeals Council, and the Office of Disability Programs' Medical Consultant Staff (MCS). The review was conducted in three phases, beginning in December 1980 and ending in July 1981.

Phase I was designed to determine the extent to which different standards applied by disability determination service (DDS) personnel and by ALJs affected hearing level reversal rates. It involved a basic sample of 3,600 recent cases which were reviewed independently by OA examiners, OHA analysts, the Appeals Council, and the Medical Consultant Staff.

Phase II focused on the effect upon ALJ decisions of the claimant's in-person appearance at a hearing. It required obtaining a second ALJ decision on 1,000 cases selected from the 3,600 base sample. The claimant's personal testimony was deleted from these 1,000 cases.

Phase III was designed to determine the effect of additional evidence submitted after the reconsideration determination. It involved the same 1,000 cases used in Phase II, except that all evidence added to the file after reconsideration was removed. Additional reviews of these cases were performed by a group of ALJs and OA examiners; the latter review included input from the MCS.

The sample selected for all phases of this study included only cases involving a primary applicant for disability benefits under DI and SSI. Therefore, claims involving disabled widows/widowers, disabled adult children, and health insurance or other non-disability cases were omitted. The cases were reviewed after the ALJ's original decision was effectuated; and the results of the reviews were not intended to have case-related impact. In other words, the claim was not "readjudicated."

### II. Sample Design

#### A. Sampling Frame

The sample of ALJ decisions was drawn from lists of all allowances and denials for the months of September 1980 through January 1981 identified from OHA's management information system (MIS). The sample included only cases involving a primary applicant for DI benefits or SSI payments. Disabled widow/widower, disabled adult child, and health insurance or other non-disability cases were not selected.

#### B. Stratification

Cases listed for each month were stratified by three characteristics, which were used as the basis for sample selection.

1. Type of Claim
    a. Applicants for DI benefits, including those who applied concurrently for SSI disability payments
    b. Applicants for SSI disability payments only
2. Type of ALJ Decision
    a. Denial—Affirmation of State agency decision
    b. Allowance—Reversal of State agency decision
3. Allowance Rate of the Original ALJ During the Prior 6 Months
    a. High—71-100 percent
    b. Medium—56-70 percent
    c. Low—0-55 percent

The levels of ALJ allowance rates used for those three groupings were determined from the weighted distribution of ALJ allowance rates for claims adjudicated during the 6 month period ending September 30, 1980. The weight equaled the average monthly production rate of the individual ALJ during those 6 months. Three allowance rate levels divided that distribution into approximately three equal parts.

Use of these characteristics and their manipulation in the way described, resulted in 12 groups of strata. Table 1 presents the population of dispositions by stratum and month.

#### C. Phase I Sample

Original plans for the Phase I sample called for 400 completed cases from each of the 12 strata (4,800 cases in all) in order to insure reasonably precise contrast of estimated stratum allowance rates. Workload pressures in the field, however, necessitated reduction of the overall sample to 3,600 cases.

In order to achieve the latter figure, the number of sample cases required in the 6 denial strata was halved. A previous study[1] had indicated that estimates of allowance rates for cases previously denied would be less variable than those for cases previously allowed.

One-third of the sample cases were allocated to the month of September (to facilitate the Phase II and III reviews). The rest of the sample cases were divided equally among the other 4 months. The number of sample cases drawn each month was 25 percent higher than the target sample size in anticipation that some cases would be out-of-scope for the review or not retrievable. Within each stratum for each month, simple random samples were drawn without replacement.

---

[1] "Consistency of Initial Disability Decisions Among and Within States," SSA Publication No. 13-11869.

Although the initial selection process was designed to include only DI or SSI disability issue cases in the sampling frame, it turned out that a small proportion of "out-of-scope" cases were included in the frame and selected for the sample inadvertently. These cases generally involved non-disability issues and thus were subsequently excluded from the study and the analysis.

Also, due to the complex nature of the case handling process at the appellate level, a small proportion of the cases were irretrievable in the time period allocated for the study.

Table 2 presents by month and stratum, targeted sample sizes, sample sizes drawn, the total number of cases actually retrieved and percent of cases in-scope for the study.

### D. Appeals Council Subsample

Original plans called for an Appeals Council review of the entire 3,600 case Phase I samples. However, lack of sufficient Appeals Council staff necessitated a reduction of the Appeals Council sample to about 2,000 cases.

The Appeals Council subsample included all cases where OA disagreed in Phase I with the original ALJ decisions and a random sample of one-sixth of the claims where OA agreed with the original ALJ decision. Table 3 shows the sample sizes obtained for the Appeals Council subsample.

### E. Phase II/Phase III Subsample

In order to complete the field work for Phases II and III as quickly as possible, sample cases for these phases were drawn from September dispositions only. All September allowances and half of the cases from the September denial stratum were used. Of the targeted 1,000 cases for this subsample, 973 cases were completed for all of the Phase II and Phase III review processes.

## III. Selection of ALJs for Phases II and III

Two separate samples of 48 ALJs were randomly selected, one for each of Phases II and III. Sample ALJs were identified from a roster of ALJs stratified by allowance rate into three equal groups based on experience for the 6-month period ending September 1, 1980. Each sample of 48 was composed of 16 ALJs from each of the high (68-100 percent), medium (55-67 percent), and low (0-54 percent) allowance rate levels. In those intances where an ALJ was unable to participate, a replacement was assigned from the same stratum.

## IV. Review Procedures

### A. Folder Preparation

1. Lists of sample cases were prepared indicating whether the case was a DI (including concurrent DI/SSI) or SSI claim, an allowance or denial, and giving the current location of the claim folder. Sample case folders were retrieved and associated with the cassette recording of the hearing if a hearing had been held.
2. The original hearing decision was separated from the rest of the material and placed in a sealed envelope.
3. If the case was designated for use in Phases II and III of the study, the evidence in the folder was separated into three parts:

   a. All of the evidence considered in connection with the reconsideration determination was placed in one section.
   b. All additional evidence considered by the ALJ with a date of origin before the date of the reconsideration, and received after the reconsideration determination, was placed in a second section.
   c. All of the remaining evidence received after reconsideration was placed in a third section.

### B. Phase I Review Procedures

1. Office of Assessment
   The first review was done by the Medical Consultant Staff and OA examiners, using the rules governing the DDSs and without knowledge of the original ALJ decision.

   a. Medical Consultant Staff—MCS performed a front-end review of all 3,600 cases in the baseline sample. A severity rating was made on each case based upon the total evidence in file. Cassette recordings of the hearing (if held) were considered as part of the evidence. The tape was audited to determine if there was medical or vocational specialist testimony at the hearing. The tape was flagged for MCS if it contained testimony from a medical specialist. Otherwise, the tape was audited at the discretion of the reviewer.

Two additional ratings were made at the same time on cases to be included in Phase III of the study. The folders requiring additional ratings had the evidence divided into three sections as described above. Medical evaluation progressed from the first section (reconsideration evidence only) to the third (all evidence) with a separate evaluation form being filled out as each section of additional evidence was added. Reports of residual functional capacity were also prepared for cases where the individual's impairment was significant but did not meet the level shown in the Medical Listings.

b. OA Examiner Review—The OA examiner was required to review the total evidence in file, including the evaluation made by MCS, and to decide whether that evidence supported an allowance or denial using the standards of evaluaton set forth in the POMS. If the case was designated for Phase III, the examiner also made a decision of allowance or denial based on the evidence available at the time of reconsideration.

2. Appeals Council Review

A de novo decision was made by the Appeals Council for each assigned case to the Appeals Council subsample and a study questionnaire was completed by an OHA analyst for each Appeals Council decision.

### C. Phase II ALJ Review Procedures

Since new hearings could not be held as part of the study, written transcripts were made from the cassettes for each of the Phase II cases. These transcripts were used as the source of the expert testimony which had been presented at the original hearing. However, any testimony by the claimant or observations about the claimant's personal appearance were edited out of the transcript by an OA examiner. The cases were distributed at random to the Phase II ALJs. A decision to allow or deny, based on the evidence in the file and the edited transcript, was made for each case.

### D. Phase III ALJ Review

The folders with only that evidence which was present at the time of reconsideration were distributed at random to the Phase III ALJs. A decision to allow or deny based on this evidence was made for each case.

## V. Estimation Procedures

### A. Phase I Sample

As indicated previously, the study was based not on a simple random sample, but rather on a stratified random sample with unequal sampling rates. As a result, estimates for the population of claims represented by the study sample could not be derived simply by inflating the sample results. Instead, case weights were constructed for each stratum separately to account for the unequal sampling rates and the cases which were out-of-scope or which could not be retrieved. A stratified ratio estimation technique was then used to make population estimates.

Case weights were constructed using the following formula. The weight $W_{hm}$ for the mth month and the hth stratum is given by:

$$W_{hm} = (N_{hm} \times P_{hm})/n_{hm}$$

where

$N_{hm}$ is the population for the h stratum in the mth month.

$P_{hm}$ is the estimated proportion of in-scope cases in the hth stratum for the mth month.

$n_{hm}$ is the number of completed sample cases in the hth stratum for the mth month.

The estimator of the in-scope population value for a characteristic, y, from the Phase I sample takes the form:

$$y = \sum_{h=1}^{12} \sum_{m=1}^{5} \sum_{i=1}^{n_{hm}} W_{hm} Y_{hmi} \quad (1)$$

where

$y_{hmi}$ is the value of the characteristic for the ith case in the mth month, in hth stratum.

The last column of Table 2 shows the stratum weights for the Phase I sample.

### B. Appeals Council Sample

The estimator for the Appeals Council sample takes the same form as equation (1) above with an adjustment for the case weights to account for the subsampling of agreement cases previously described and to bring stratum estimates up to stratum population totals.

The Appeals Council weights were constructed as follows:

$$W_{hm}^{(AC)} = \begin{cases} \dfrac{n_{hm}}{(n_{hmd} + n_{hma})} \cdot W_{hm} \text{ for disagreements} \\[2ex] \dfrac{n_{hm}}{(n_{hmd} + 6\, n_{hma})} \cdot W_{hm} \cdot 6 \text{ for agreements} \end{cases}$$

where

$n_{hm}$ and $W_{hm}$ are defined as above.

$n_{hmd}$ and $n_{hma}$ represent the number of sample disagreements and agreements between OA and the original decision.

### C. Phases II and III Sample

The estimator for this sample takes the same form as equation (1) above except that the weight $W_{hm}$ is doubled for the denial strata ($h = 1, \ldots, 6$).

## VI. Estimation of Sampling Variances and Covariances

The variance estimator was derived by dividing each stratum into 10 random groups using the terminal digit of the case Social Security number. Variances and covariances were derived using the standard stratified random group estimator.

Standard error information is given in Table 4. Two words of caution are in order. First, the estimates of standard error for the Appeals Council sample are overestimated (that is conservative).[2] Second, when making contrasts of percentages between decisionmakers on the same sample or between phases for the same decisionmaker, there are large positive sampling covariances between the estimates. Thus, the square root of the sum of the squares of the standard error for the two estimates would overestimate the standard error of the difference of the estimates.

---

[2] A generalized attribute curve did not fit well to the individual relvariances for the Appeals Council subsample.

TABLE 1.—Population totals—stratum by month

| Stratum | | | Month | | | | | |
|---|---|---|---|---|---|---|---|---|
| Original decision | Type of claim | ALJ allowance rate | Total | Sept. | Oct. | Nov. | Dec. | Jan. |
| Total | | | 80,783 | 17,502 | 17,268 | 16,265 | 14,966 | 14,782 |
| 1. Denial | DI | Low | 10,527 | 2,349 | 2,313 | 2,062 | 1,809 | 1,994 |
| 2. Denial | DI | Medium | 8,559 | 1,790 | 1,800 | 1,655 | 1,629 | 1,685 |
| 3. Denial | DI | High | 3,131 | 658 | 700 | 624 | 591 | 558 |
| 4. Denial | SSI | Low | 3,502 | 742 | 766 | 728 | 651 | 615 |
| 5. Denial | SSI | Medium | 2,798 | 563 | 571 | 549 | 502 | 613 |
| 6. Denial | SSI | High | 3,843 | 208 | 227 | 211 | 198 | 201 |
| 7. Allowance | DI | Low | 10,661 | 2,331 | 2,291 | 2,191 | 1,944 | 1,904 |
| 8. Allowance | DI | Medium | 16,514 | 3,470 | 3,467 | 3,298 | 3,097 | 3,182 |
| 9. Allowance | DI | High | 13,993 | 3,212 | 3,000 | 2,847 | 2,680 | 2,254 |
| 10. Allowance | SSI | Low | 2,776 | 576 | 595 | 581 | 517 | 507 |
| 11. Allowance | SSI | Medium | 4,000 | 827 | 814 | 834 | 777 | 748 |
| 12. Allowance | SSI | High | 3,331 | 776 | 724 | 685 | 571 | 575 |

# Low-Income Aged: Eligibility and Participation in SSI*

This article reports on a study undertaken to evaluate the Social Security Administration's (SSA) methods for estimating the number of persons eligible for Federal Supplemental Security Income (SSI) payments. SSA estimates that 65-70 percent of the aged eligible for SSI actually participate in the program. It has been argued that the actual participation rate may be either higher or lower than SSA estimates because SSA misestimates the size of the eligible population. SSA bases its estimates of the number of persons eligible on data in the Census Bureau's Current Population Survey (CPS). In this study, a sample of 2,000 low-income aged persons was interviewed in 1979, and two sets of information were collected: One duplicated the data used by SSA to make its estimates; the other duplicated the type of information collected when a person actually applies for SSI. When the two sets were compared, it was found that the methodology that SSA uses to estimate the size of the eligible population and the information collected from SSI applicants produced estimates that were quite similar.

The study also evaluated theories to explain why some persons eligible for SSI do not claim benefits. The study found that the elderly are more likely to participate in SSI if they live in States that supplement Federal SSI payments and that do not have a history of imposing liens on the property of welfare recipients. Participants also tend to have somewhat lower incomes (excluding SSI) than nonparticipants. No evidence was found that variations in practices among Social Security district offices could account for differences in SSI participation rates.

In 1972, Congress enacted the Supplemental Security Income (SSI) program, which, for the first time, established Federal minimum income guarantees and uniform eligibility criteria for assistance to the needy aged, blind, and disabled. Until then, these persons had been covered by individual State-administered programs jointly funded by the States and the Federal Government. The SSI program is federally funded, although States are required to supplement the Federal payment for persons who were receiving more under the old State program than they would be guaranteed under SSI; States may also voluntarily supplement the Federal benefits for some or all categories of beneficiaries.

Estimates made while the SSI legislation was being debated in Congress indicated that twice as many persons would participate in the Federal program as were receiving benefits under the State-administered programs. It was projected that 90 percent of an estimated 6.7 million eligible persons would participate in the

*Prepared by Linda Drazga, Melinda Upp, and Virginia Reno, Office of Program Analysis, with assistance from Michael Staren, Division of Supplemental Security Studies, Office of Research and Statistics, Office of Policy, Social Security Administration. The study on which this report is based was performed by Urban Systems Research & Engineering, Inc., of Cambridge, Massachusetts. A public use data tape of responses from the 2,000 aged persons in the survey is available from the Social Security Administration.

Federal program. These figures were based on the assumption that more people would be eligible for and participate in SSI because the guarantee level ($130 a month for an individual and $195 a month for a couple in 1974)[1] was higher than the payment standards in most States and because provisions believed to discourage participation in some States were not retained in the Federal program.[2]

In January 1974, when the Social Security Administration began implementing the SSI program, 3.1 million recipients were converted from the State assistance programs. The size of the SSI caseload grew to 4.0 million by the end of 1974 and to 4.3 million by the end of 1975. Despite this growth, the number of participants remained considerably smaller than the number that had been estimated to be eligible. Special outreach activities were undertaken to enroll eligible nonparticipants, but the number of participants did not increase.[3]

The reason for the discrepancy between the number estimated to be eligible and the number actually participating has not been clear. Some have theorized that the participation rate in fact is higher than it has appeared because the number of persons who are eligible has been overestimated. There was interest, too, in finding the presumed reasons for nonparticipation. Several theories were put forth. In 1977, SSA's Office of Research and Statistics, responsible for estimating the size of the eligible population, contracted for a study to evaluate both SSA estimating techniques and the primary theories advanced to explain nonparticipation.

The study was limited to the aged and was not intended to be representative of the low-income aged population as a whole. Thus, the precise results do not necessarily apply generally. The study was designed to test specific hypotheses that might explain differences between the number of persons estimated to be eligible and the number actually participating. This article summarizes the study's methodology and findings.[4]

## Hypotheses Tested

One objective of the research was to determine whether SSI participation rate estimates are inaccurate because the size of the eligible population is overestimated. To make its estimates, SSA uses information related to the main SSI eligibility and benefit level criteria—income, assets, and living arrangements—from the March Current Population Survey (CPS) administered by the Bureau of the Census. The CPS data provide, however, only rough approximations. For example, SSI eligibility depends on an applicant's current income, but the CPS collects information only about a respondent's income in the year before the survey. In the study, a sample of elderly persons was asked both the type of questions included in the CPS and those included in processing an actual claim for SSI benefits. When the results were compared, it was found that SSA's estimates based on CPS data were not overstating the size of the eligible population. In fact, the study found that estimates based on the two types of information are quite similar.

A second objective was to test factors thought to influence program participation. Two factors indicated by previous research to be associated with higher participation rates were the availability of State supplements to the Federal SSI benefit and the absence of liens against welfare recipients' property under State assistance programs preceding SSI. The availability of State supplements, by increasing the value of the total SSI payment, was thought to make it more worthwhile for those eligible for relatively small Federal benefits to apply for the combined payments. And lien laws may have discouraged participation in the programs whose participants were converted to SSI when SSI was enacted and thereby continued to affect SSI participation. This development might have occurred either because persons potentially eligible for SSI but not for the preceding program were not automatically converted and were unaware of the new program or because they thought the lien laws still applied.

Other factors tested for their potential effects on participation included:

- Population characteristics such as urban/rural residence, income, age, sex, race, marital status, living arrangements, education, and assets.
- Knowledge, experience, and attitudes of eligible nonparticipants.
- District office procedures for processing applications and staff attitudes toward applicants.

As expected, the study found participation rates highest in States that both offered supplements to the Federal benefit and had no prior lien laws. Eligible nonparticipants had slightly higher average incomes from sources other than SSI and were somewhat younger, better educated, and more likely to be white and female than participants. Almost half the nonparticipants said they had not heard of the SSI program although nonparticipants had as many social contacts, listened as often to radio and television, and read newspapers as much as participants. No correlation was found between district office practices or staff attitudes and participation rates. A large majority of both participants and nonparticipants thought they had been treated with courtesy and respect when they visited the local district office.

---

[1] The monthly benefit rate is adjusted each year by the Consumer Price Index. The monthly Federal benefit rate from July 1, 1981, through June 1982 is $264.70 for an individual and $397.00 for a couple.

[2] In some States, for example, liens were attached to a person's property or estate as a condition of payment receipt.

[3] As of July 1981, 3.6 million aged, blind, and disabled persons received Federal SSI payments. Although the number of participants has declined since 1975, the number of aged estimated to be eligible has also declined, largely as a result of increased coverage and benefits under the Social Security program.

[4] The project was intended as a pilot for a national study and was limited to the aged population because (1) most of the public concern has been about participation rates in the aged population and (2) selecting a sample of aged persons was considerably easier than a sample of those potentially eligible for disability benefits.

## Sample Design

To test the various hypotheses, a sample of 2,000 low-income elderly persons was interviewed. These persons lived in 34 SSA district office areas in 18 locations throughout the country. Some 500 SSA staff from the 34 offices also were interviewed. The offices were located in four types of States: Those with State supplements and no prior lien laws, those with supplements and prior lien laws, those without supplements but with prior lien laws, and those without supplements or prior lien laws. Rural and small, medium, and large urban areas were selected; within the large areas, inner-city, blue collar, and more well-to-do suburbs were included. The sites were not intended to be nationally representative but rather to reflect site characteristics thought to affect program participation.

The sample of low-income elderly was drawn from two sources: (1) Those already receiving SSI were selected from the Supplemental Security Record (SSR), SSA's master file of SSI recipients, and (2) persons not receiving SSI were selected from the Master Beneficiary Record (MBR), SSA's file of persons entitled to Social Security benefits or enrolled in Medicare. Since almost all persons aged 65 or older are eligible for Medicare, and since the Medicare participation rate is nearly 100 percent, this file was considered the best source available to identify aged persons who might have been eligible for, but were not receiving, SSI.[5]

The sample of nonrecipients was screened twice before the final sample selection. Those with Social Security benefits high enough to make them ineligible for SSI were excluded. Then a brief mail survey was used to screen out those whose total income was above the SSI eligibility range and those who were institutionalized. Personal interviews were conducted in the summer of 1979—both with those receiving SSI and with those whose response to the mail survey indicated their incomes might be low enough for them to be eligible for SSI but who were not receiving it. Interviews were completed with 522 recipients and 1,509 nonparticipants. Among the latter, 522 were found to be eligible for SSI and 987 were ineligible, primarily because they did not meet the SSI assets test or other eligibility criteria. Thus, the final analysis was based on a sample of 1,044 eligible participants and nonparticipants.

## Estimates of the Number Eligible for SSI

As noted earlier, two sets of questions for determining SSI eligibility were asked of each person in the sample. The first set duplicated the questions in the March Current Population Survey (CPS) on demographic data, living arrangements, and last year's income that are now used to estimate SSI eligibility. The second set of questions replicated, to the extent possible, the questions asked when a person actually applies for SSI—living arrangements, the value of current asset holdings, and monthly and quarterly income (both retrospective information about last month's and quarter's income and expected income for the next month and quarter). The study then looked separately at the effects of using each of the "proxies" SSA derives from the CPS data (for income, assets, and living arrangements), and at the combined effect of using CPS data. From these estimates the study calculated the number of eligible persons who were not receiving but were eligible for SSI. When SSA estimates the number of persons eligible for SSI, it uses as its basis the entire aged population, including those receiving SSI. The difference between these two modeling procedures was also compared.

### CPS Income and Reporting Period

Use of CPS income data was thought to affect the accuracy of eligibility estimates for two reasons. First, the March CPS provides detailed information on income amounts and sources for the preceding year. SSI eligibility is based on current income, not income received last year. Thus, some types of income reported for last year in the CPS may no longer be received at the time of the survey, or new types of income could be received. Second, amounts received may be incorrectly reported. For example, other analyses of CPS income data have indicated that the CPS, like other surveys, tends to underreport even recent income. Such underreporting is particularly a problem with asset income or other types of income received only irregularly or in small amounts during the year and therefore might be overlooked when a person is asked to recall income for an entire year. Underreporting of income in the CPS could result in an overestimate of SSI eligibility. On the other hand, the March CPS may have errors of overreporting of last year's income from programs with indexed benefits such as Social Security. If persons report Social Security income as 12 times their current monthly rate, last year's income would be overstated because benefits are increased for the cost of living in July of each year. Overreporting of income would result in an underestimate of SSI eligibility.

---

[5] Although it was the most efficient source available to identify low-income aged persons, the MBR may leave out some eligible nonrecipients. The MBR identifies all persons aged 65 or older who are enrolled in Medicare and who do not receive SSI and who either do not receive Social Security benefits or receive relatively low amounts. The MBR would, however, exclude anyone who was neither receiving Social Security nor SSI, nor had enrolled in Medicare. Because the same sample was used for the two sets of estimating procedures, it could affect estimates of total participation rates but not differences between the two procedures.

The study found that, on balance, the CPS income data produced a slightly higher estimate of the income of the low-income population and that therefore SSA's methodology, based on CPS income data, produced a slightly smaller estimate of the eligible population. As shown in table 1, the difference is small and not statistically significant; that is, there is at least a 5-percent chance that the "real" difference is zero.

## Asset Holdings

The SSI program imposes an asset as well as an income test to determine eligibility. An individual with financial assets of more than $1,500 ($2,250 for a couple) is ineligible for SSI payments. Certain types of assets, such as a home, are not counted in the asset test.

The CPS does not gather information on the value of asset holdings, although it does ask about income from assets—rents, dividends, and interest—during the past year. SSA uses the asset income information from the CPS to impute the value of countable asset holdings by assuming that reported income from assets represents a 6-percent annual return on the value of assets held.

Because asset income is known to be underreported in surveys, some have speculated that estimates based on this procedure would underestimate asset holdings of those potentially eligible for SSI and therefore tend to overstate the number of persons eligible for SSI. However, because those with higher incomes are more likely to have assets, any underestimates of assets for those with income below the SSI benefit rate may be relatively small. The study results indicate that SSA's imputation of asset holdings from CPS data does not produce an estimate of SSI eligibility that is significantly different from estimates based on questions used in the application process.

**Table 1.**—Differences between current and study estimate of number of aged persons eligible for SSI in 34 district office locations

| Souce of difference | Percent difference [1] | Percent standard deviation [2] |
|---|---|---|
| Use of CPS proxy for— | | |
| Income eligibility | − 1.6 | 2.6 |
| Asset eligibility | 1.7 | 2.6 |
| Living arrangements | − 5.0 | 2.6 |
| Total proxy data | − 5.1 | 2.6 |
| Modeling differences | [3] − 9.2 | 2.1 |
| Total difference | [3] − 13.9 | 2.4 |

[1] $$\text{Difference} = \frac{\text{Current Estimate} - \text{Study Estimate}}{\text{Study Estimate}}$$

[2] Statistical significance at the 95-percent level of certainty is calculated by multiplying the difference (for example, − 1.6 percent) by 1.96 times the standard deviation (2.6 percent) and adding and subtracting the product (5.096) from the difference. There is a 95-percent chance that the "true" difference lies somewhere within a confidence interval, which, in this case, equals − 1.6 plus or minus 5.096, or − 6.696 to + 3.496. If zero lies within the confidence interval, as it does in this case, the difference is not statistically significant because there may be no (zero) difference between the two estimates.

[3] Significant at the 95-percent level of confidence. See footnote 2.

## Living Arrangements

For those who live in another's home and do not establish that they contribute their share of household expenses, the Federal SSI income guarantee is reduced by one-third (to $176.47 for an individual in July 1981). Thus, when an aged person lives with others, SSI eligibility is affected by homeownership and within-household expenditure patterns, as well as the aged person's current income. For example, a person with $200 in monthly Social Security benefits would be eligible for an SSI benefit of $84.70 if he or she lived independently but would be ineligible if living in another's home and not sharing in household expenses.

The March CPS does not gather information on homeownership or on the extent to which individuals within households share expenses, but indicates only whether a person is a "household head" and presumably, therefore, paying for at least part of household expenses. In deriving its estimates, SSA thus must make some assumptions about which income guarantee to apply to aged persons who live with others. SSA assumes that the full benefit rate applies if the aged person or spouse is designated the "household head." If someone other than the aged person is designated the "household head," the aged person would be considered in another's household and the reduced benefit rate would apply in SSA's estimation procedures.

It was expected that current methods for taking account of living arrangements would understate the number eligible for SSI because persons other than the household head may also pay a pro rata share of household expenses. The study found that this may be true, but again the difference was not significantly different from zero.

## Combined Effect of Using CPS Data

Even when the effects of using CPS data as proxies for all these aspects of the application process—income, assets, and living arrangements—were combined, the difference in the estimates of the size of the eligible population was not statistically significant. Thus, it appears that the accuracy of SSA's participation rate estimates is not affected by relying on CPS data.

### Modeling Differences

In making its estimate of the eligible population, the study calculated the number of persons found to be eligible for, but not receiving, SSI. That number was then added to the number in its sample who were known to be receiving SSI. It was assumed that all who were receiving SSI were in fact eligible for it. The research did not independently verify that eligibility.

In contrast, SSA's modeling procedures do not assume that participants are eligible for SSI. Instead, eligibility is simulated for the total population, including both participants and nonparticipants. Independent quality assurance data for 1979 indicate that, in fact, about 4 percent of the entire SSI caseload (including the blind and disabled) do not meet the eligibility criteria. Not surprisingly, then, the study produced a higher estimate of the eligible population. The difference—about 9 percent—is statistically significant. If the number of noneligible participants is considered, however, the difference is only about 6 percent.

### Total Effects

When both the effects of using SSI claims application data and of estimating eligibility of only nonparticipants are considered, the study estimated a somewhat larger eligible population than was estimated using SSA's method. SSA's method produced an estimate of the eligible population about 14 percent lower than the study's method. When the difference is adjusted to take account of ineligible participants, however, it becomes even smaller—about 11 percent.

Because this study was exploratory in nature and was not designed to represent the national population, the exact magnitude of difference between the two estimates should be interpreted with caution. The main finding is that current methods seem to produce reasonably accurate estimates of eligibility.

## Reasons for Nonparticipation

The second part of the study was designed to evaluate why some eligible persons do not participate in SSI. As noted earlier, among the variables considered were the effects of State policies such as prior lien laws and supplements to Federal payments, socioeconomic characteristics of nonparticipants, attitudes and knowledge of nonparticipants, and district office practices. For this portion of the analysis, the study's estimates of program participation rates for the sample are compared across sites. Because the study's sample was not designed to represent the national population, this research focused on differences between participants and nonparticipants. Specific estimates of characteristics of either group may not reflect the national population.

### State Supplements and Lien Laws

One of the theories thought to explain nonparticipation is that eligible nonrecipients may be eligible for only small payments and may therefore feel it is not worth the effort to apply. If this were the case, one would expect participation in the Federal program to be significantly higher in States that provide supplements to Federal payments than in States that do not.

The study did find slightly higher participation rates in the States providing State supplements, as shown in table 2. The difference, however, was not large enough to be statistically significant. Similarly, participation rates are slightly lower in the States that had, in the past, imposed liens on the property of assistance recipients. This difference is also not statistically significant. Only when the effects of both past and current State policies are combined do participation rates vary significantly. The participation rate is highest for study sites with State supplements and no past lien laws. The lowest rate is for States with prior lien laws and no State supplements.

### Socioeconomic Characteristics

The study compared SSI recipients with eligible nonrecipients to determine whether nonrecipients have certain characteristics that explain their nonparticipation. In this section the two groups are compared by demographic characteristics, income sources or amounts, and asset holdings.[6]

**Demographic characteristics.** As did previous studies, this analysis found that those receiving SSI include relatively large proportions of women, unmarried persons, blacks and members of other minority races, and persons with limited education. These attributes also describe the group eligible for, but not receiving SSI, as

**Table 2.**—SSI program participation rates by site characteristics for a sample of low-income aged in 34 district office locations

| State policy | Participation rate |
|---|---|
| State supplement | 73 |
| No State supplement | 67 |
| Former lien law | 69 |
| No former lien law | 73 |
| Combined effect: [1] | |
| State supplement and no lien law | 79 |
| State supplement and lien law | 69 |
| No State supplement and no lien law | 70 |
| No State supplement and lien law | 60 |

[1] The difference in participation rates was found to be significant at the 5-percent level of confidence.

---

[6] For this portion of the analysis the elderly persons' answers to the survey questions were reweighted to reflect the relative size of the recipient and nonrecipient groups found in the study. The reweighted sample consists of 729 recipients and 254 nonrecipients.

shown in table 3. The study indicates some differences between the two groups, however. The nonrecipients were somewhat younger, with an average age of 73.9 years, compared with 75.3 years for recipients. More nonrecipients were women—79 percent, compared with 73 percent of recipients—and fewer lived alone—34 percent, compared with 42 percent of the recipients. More of the nonrecipients were married—26 percent, compared with 21 percent of recipients. The nonrecipients have more education—an average of 7.3 years, compared with 6.8 years for recipients. Participation rates did not vary significantly between urban and rural areas or between large and small cities.

**Income.** When SSI payments are taken into account, the SSI recipients had higher average total incomes than did those eligible for but not receiving SSI, as shown in table 4. This difference is to be expected, since SSI is designed to supplement income for those with low incomes. When SSI payments are not counted, then the eligible nonrecipients, particularly the couples, had higher average incomes from other sources than did the SSI recipients. This finding suggests that the eligible nonrecipients, on average, may be eligible for smaller Federal SSI payments than is the case for SSI recipients and is consistent with the theory that some of those eligible only for relatively small benefits may think it is not worth applying for benefits.

**Table 3.**—Demographic characteristics of a sample of SSI recipients and eligible nonrecipients in 34 district office locations

| Characteristic | Recipients | Eligible nonrecipients |

[1] Differences significant at the 5-percent level of confidence.

Social Security is the most common type of income received by both the SSI recipients and the eligible nonrecipients, as shown in table 5. However, more of the nonrecipients received Social Security—95 percent, compared with 74 percent of SSI recipients. Although they were more likely to receive Social Security, the eligible nonrecipients had smaller average amounts of Social Security income than did SSI recipients.

Earnings were another potential source of income for the SSI recipients and eligible nonrecipients. Under the SSI program, a certain amount of earned income is disregarded in determining eligibility for payments—the first $65 in monthly earnings and half of earnings above that amount. Relatively few of those eligible for SSI had income from earnings, but it was an important source for those who did. The eligible nonrecipient couples were somewhat more likely to have earnings—25 percent, compared with 4 percent of recipient couples.

**Asset holdings.** Both the recipients and eligible nonrecipients were less likely to be homeowners than were persons in the aged population generally. The eligible nonrecipients, however, were more likely than recipients to own their homes. About two-fifths of eligible nonrecipients, compared with one-fifth of recipients, owned or were buying their homes.

Both recipients and nonrecipients had limited amounts of liquid assets, as would be expected given that SSI eligibility is based on asset holdings. The eligi-

| Other income | ...... | 10 | 90 | ... | 8 | 71 |

[1] Mean amount for those receiving.

[2] The data on income sources and amounts are based on the study survey, rather than on program records. Because some respondents misreport the sources of their income, a few of the SSI recipients reported no SSI income while a few of the nonrecipients reported they received it.

ble nonrecipients were slightly more likely to report having any liquid asset holdings—72 percent, compared with 68 percent for recipients. The mean value of liquid assets for those who had them was $451 for eligible nonrecipients, compared with $518 for recipients. This difference was not statistically significant.

Although the demographic profile of eligible nonrecipients differs slightly from that of recipients, no strong explanation for their nonparticipation emerges. The nonparticipants do have slightly higher incomes from sources other than SSI and are somewhat more likely to own their homes.

## Knowledge, Experience, and Attitudes

Some of the theories to explain nonparticipation in the SSI program suggest that nonparticipants may be unaware of the program or may have negative experience with or attitudes toward government programs. The survey explored various dimensions of these theories.

**Social contact and mobility.** Some researchers have hypothesized that the aged who don't participate in SSI are unaware of the program because they are more isolated, less mobile, and have fewer social contacts than do SSI recipients. The study, however, found no difference in mobility between the SSI recipients and eligible nonrecipients, and it found only a slight difference in social contact. Nonparticipants are about as likely to watch television more than 2 hours a day (56 percent, compared with 59 percent) and are more likely than participants to read newspapers (55 percent, compared with 37 percent) and listen to a radio each day (63 percent, compared with 54 percent). If anything, these responses would suggest greater, not less, social contact on the part of nonparticipants.

**Experience with Social Security offices.** Because the Social Security Administration is responsible for administering the SSI program, all of the SSI recipients had had contact with Social Security offices. Virtually all of the eligible nonrecipients had also had experience with Social Security. The large majority of both groups (88 percent) felt they were treated with courtesy and respect by the Social Security office. Few (about 10 percent) mentioned any serious problems in applying for Social Security benefits. The kinds of problems that were mentioned most frequently include "too long a wait" or problems in verifying necessary information. When asked to rate their overall experience of Social Security offices as satsifactory or unsatisfactory, the large majority of both groups rated it as satisfactory (80–84 percent) or at least "so-so" (10–15 percent). Only about 5 percent rated it as unsatisfactory. The study therefore suggests that elderly persons' nonparticipation in SSI is not associated with negative experience with the Social Security office.

**Experience with welfare departments.** Some persons have hypothesized that the elderly who don't participate in the SSI program may be relunctant to apply for means-tested payments even though such payments are administered by SSA. This theory was tested by asking nonparticipants about their experience with local welfare offices.

The study found that the eligible nonrecipients were far less likely than SSI recipients to have had any experience with local welfare departments. Only 22 percent of the eligible nonrecipients, compared with 51 percent of the SSI recipients, reported they had ever contacted a welfare department to request such assistance as cash payments, food stamps, or medical assistance. Thus, if experience with welfare departments is an indication of the willingness to claim means-tested payments (including those administered by the SSA), it appears that the nonparticipants are less inclined to have sought such aid. Of those who had sought assistance, the eligible nonrecipients were less likely to have received the aid they sought.

**SSI knowledge and experience.** Some persons have hypothesized that the elderly do not participate in SSI because they do not know about the program. The study found, however, that 55 percent of the eligible nonrecipients report that they had heard of the SSI program, although 45 percent said they had not. The experience of those who had heard of SSI indicates that awareness of the program is not always sufficient to prompt participation.[7] Sixty percent of the nonparticipants who said they had heard of SSI also said they had never tried to find out if they could get it. They usually gave such reasons as they did not think they were eligible, did not need it, or had not considered it. A few said they did not like the application process.

An analysis of program records revealed that just under 10 percent of all eligible nonparticipants had previously received SSI payments but subsequently lost their eligibility and then were again found eligible at the time of the study. This finding suggests that the composition of the eligible population may not be as static as some persons have previously assumed. Some of the low-income elderly seem to move in and out of eligibility status.

## District Office Operations

Some persons have speculated that variations in attitudes and practices of district office workers who take applications for income security payments might result in differences in program participation rates. When SSA was given responsibility for implementing the Federal SSI program in 1974, one of the aims was to provide uniform administration of the program throughout the Nation. Thus, any variations in program participation rates that might be caused by differences among district offices would be of particular interest to SSI program administrators.

The study was designed to examine the relationship between district offices' practices and SSI participation rates. All claims representatives in the offices visited were asked to complete a written questionnaire. For the analysis, two techniques were employed. First, for some comparisons, the district offices were divided into groups of those with low, average, and high participation rates. Second, the proportion of claims representatives with a specific characteristic was compared with the estimated participation rates.

Several hypotheses regarding the impact of district office operations on participation rates were tested. First, some have hypothesized that possible negative attitudes of claims representatives toward SSI applicants or toward the job of administering the SSI program could discourage participation. All claims representatives in each site were asked a series of questions about their perceptions of SSI recipients and their attitudes toward the job of administering the SSI program. None of the hypothesized relationships between claims representatives' attitudes and area participation rates were found.

Next, some have speculated that relatively low SSI participation rates might be explained by an hypothesized district office practice of discouraging formal applications when it appeared likely that the claim would be denied. Claims representatives were asked how they would handle a series of hypothetical cases with borderline potential eligibility. No significant relationship was found between the claims representatives' reports of how they would treat the hypothetical cases and area participation rates.

Finally, some have hypothesized that differences in SSI participation rates could be explained by differences among district offices in the degree to which they help applicants establish their entitlement to payments. A number of hypothetical cases were developed for which claims representatives could "go by the book," give an applicant the benefit of the doubt, or handle the case more strictly than is absolutely necessary. In all instances, no relationship was found between the claims representatives' reports of how they would handle these cases and the area participation rates. The informal conversations with claims representatives reinforced the finding that, in general, claims representatives provide the kind of impartiality required by the Social Security Administration.

---

[7] After the study was completed, about 300 of the nonparticipants were sent a letter indicating that they might be eligible for SSI payments and should contact their local Social Security office. Only about 10 subsequently applied for and received payments. Thus, even personal letters from SSA did not substantially increase participation.

[1] Emergency relief funds of $1,630.3 million in 1940 total, not included elsewhere. Includes training allowances to unemployed workers under Area Redevelopment Act and Manpower Development and Training Act for 1961–75, not shown separately.

[2] Beginning December 1980, includes public assistance payment revisions for 1940–79.

[3] Retirement and survivor benefits beginning 1940; disability benefits beginning 1957. Beginning October 1966, includes special benefits authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[4] Includes annuities to widows under joint-and-survivor election before 1947. Beginning February 1967, includes supplemental annuities for career railroad employees.

[5] Excludes refunds of contributions to employees who leave service.

[6] Includes survivor annuities under joint-and-survivor elections before 1948.

[7] Represents Federal contributory systems other than civil service, Federal noncontributory systems for civilian employees and career military personnel, and systems for State and local government employees. Monthly data not available.

[8] Payments to veterans and survivors of deceased veterans, including special allowances for survivors of veterans who did not qualify under OASDHI (Servicemen's and Veterans' Survivor Benefit Act of 1956) and through June 1973, subsistence payments to disabled veterans undergoing training.

[9] Death payments.

[10] Includes annual and monthly data for railroad retirement, veterans' programs, and Federal civil service retirement. For "other" public employee systems, annual data only.

[11] Annual and monthly totals include regular State unemployment insurance program and payments made by States as agents of the Federal Government under the Federal employees' unemployment compensation program and under the Ex-Servicemen's Compensation Act of 1958. Annual data only for payments under Servicemen's Readjustment Act of 1944, Veterans' Readjustment Act of 1952, Trade Expansion Act of 1962, Disaster Relief Act of 1970, and the temporary and permanent extended unemployment insurance programs. Beginning 1961, includes program in Puerto Rico.

[12] Benefits in Rhode Island (from 1943), in California (from 1947), in New Jersey (from 1949), in New York (from 1950), in Puerto Rico (from 1970), including payments under private plans where applicable. Monthly data not available.

[13] Benefits began 1947.

[14] Under Federal workers' compensation laws and under State laws paid by private insurance carriers, State funds, and self-insurers. Beginning 1959, includes data for Alaska and Hawaii. Monthly data refer only to Federal "black lung" benefits administered by Social Security Administration (starting 1970).

[15] Includes Aid to Families with Dependent Children and general assistance. Through 1973 includes old-age assistance, aid to the blind, and aid to the permanently and totally disabled. Includes payments to intermediate-care facilities (July 1968–December 1971), and payments for emergency assistance, beginning July 1969. Includes money payments under medical assistance for the aged (1960–69). Excludes medical vendor payments. Starting 1974, includes money payments to the aged, blind, and disabled in Guam, Puerto Rico, and the Virgin Islands under federally aided public assistance programs.

[16] Supersedes the public assistance programs of old-age assistance, aid to the blind, and aid to the permanently and totally disabled in the 50 States and the District of Columbia, beginning 1974; beginning 1978, in the Northern Mariana Islands. Annual, but not monthly, totals include payments under State-administered supplementary programs.

[17] Data not available.

Source: Based on reports of administrative agencies on a checks-issued basis (including retroactive payments) where available. Data for public assistance and State unemployment insurance programs adjusted monthly, other data adjusted annually.

[1] Benefit expenditures from the Federal hospital insurance and supplementary medical insurance trust funds as reported by the U.S. Treasury.

[2] Excludes payments by Railroad Retirement Board for beneficiaries in Canadian hospitals.

[3] Benefits in California and New York (from 1950), including payments under private plans. Monthly data not available.

[4] Benefits under Federal workers' compensation laws and under State laws paid by private insurance carriers, State funds, and self-insurers. Beginning 1959, includes data for Alaska and Hawaii. Monthly data not available.

[5] Federal matching for medical vendor payments under public assistance began October 1950.

[6] Data not available.

Source: U.S. Treasury and unpublished data from administrative agencies.

## Table M-3.—Selected social insurance and related programs: Beneficiaries of cash payments, 1940-81

[1] Includes dependents.

[2] Beginning October 1966, includes special benefits authorized by 1966 legislation for persons aged 72 and over and not insured under the regular or transitional provisions of the Social Security Act.

[3] Monthly number at end of quarter.

[4] Average number during 14-day registration period.

[5] Average weekly number in December. Includes regular State unemployment insurance, the Federal employees' unemployment compensation program, and the ex-servicemen's compensation program.

[6] Includes dependents and survivors.

[7] Less than 500.

[8] Data not available.

Source: Based on reports of administrative agencies.

---

[1] Represents contributions of employees, and the self-employed in employments covered by OASDHI under the Social Security Act, on an estimated basis, with suitable subsequent adjustments. Data for earlier years reflect former appropriation bases. Includes deposits by States under voluntary coverage agreements. Employee-tax refunds deducted. Excludes transfer from general revenues.

[2] Excludes transfers between OASDHI system and railroad retirement account under the financial interchange provisions of the Railroad Retirement Act.

[3] Represents employee and Government contributions. Beginning 1968, also includes Foreign Service and contributory survivor programs for Federal judiciary and Tax Court. For civil service, employee share includes voluntary contributions to purchase additional annuity; government share includes Federal and District of Columbia agency contributions and, beginning 1968, Federal payment for current unfunded liability.

[4] Beginning 1959, net of tax refunds. Contributions for hospital insurance of railroad workers are collected and reported with railroad retirement contribution initially and are transferred once a year (usually in August) to the hospital insurance trust fund; data for that month only are adjusted by the Treasury source to reflect the transfer.

[5] Excludes reimbursement from Treasury general funds for cost of benefits for persons not insured for cash benefits under OASDHI or railroad retirement. Includes contributions for hospital insurance coverage of railroad workers (principal amount only), see footnote 4; and, beginning July 1973, premiums for voluntary coverage of uninsured individuals aged 65 and over.

[6] Through 1952 represents deposits in State clearing accounts of contributions plus penalties and interest collected from employers and contributions from employees (3 States in recent years), as reported by State agencies (to Department of Labor, 1950–52). Starting 1953, represents State deposits in (Federal) unemployment trust fund.

[7] Represents taxes paid by employers under the Federal Unemployment Tax Act. Beginning 1961, net of tax refunds. Includes tax proceeds for financing temporary extended unemployment compensation programs for 1958 and 1961. December 1976 figure includes treasury adjustments (minus) for misclassification of two prior month's taxes.

[8] Beginning 1947, also covers railroad temporary disability insurance.

---

[1] Equals amounts appropriated (estimated tax collections, subsequently adjusted). Includes deposits by States under voluntary coverage agreements and deductions for refund of estimated employee-tax overpayment. Early years reflect former appropriation bases.

[2] From 1947 to 1951, for benefits with respect to certain World War II veterans. Beginning 1966, for military wage credits, and beginning December 1968 for military credits and Federal payment for special age-72 benefits, see footnote 4.

[3] Includes interfund transfer of interest on reimbursed administrative expenses, 1958 to date (see footnote 6).

[4] Before deductions for (1) SMI premium payments and, when applicable, (2) recoupment of overpayments of hospital and medical service benefits provided to OASI beneficiaries. Includes special benefits for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[5] The purpose of the financial interchange provisions of the Railroad Retirement Act, as amended, is to place the trust funds in the same position in which they would have been had railroad employment always been covered under OASDHI. Negative figures represent transfers to OASI trust fund. Excludes transfers to HI trust fund for hospital insurance coverage of railroad workers (accounted for in table M-7).

[6] Beginning 1951, adjusted for reimbursement to trust fund of small amounts for gifts, sales, or services. Beginning 1953, includes expenses for central and regional office building construction. Except for reimbursements from the appropriate trust fund to Treasury Department for its expenses as incurred, beginning 1957 administrative expenses for OASI and DI were paid initially from OASI trust fund with subsequent reimbursement, plus interest (see footnote 3), from DI trust fund for allocated cost of DI operations. Beginning 1966, subject to subsequent adjustment among all 4 social security trust funds for allocated cost of each operation.

[7] Book value: includes net unamortized premium and discount, accrued interest purchased, and repayment of interest accrued on bonds at time of purchase.

[8] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[9] Reflects assets of predecessor fund, the old age reserve account, January 1937-December 1939.

[10] Public Law 96-403 approved October 9, 1980, provides for the reallocation of social security tax receipts between the OASI and DI trust funds for calendar years 1980-81. Transfers from the DI to the OASI fund were required to implement the change retroactive to January 1980. A $3,528,795,000 transfer in October 1980 represented the accumulated tax receipts, and a $120,801,000 transfer in April 1981 was the interest earned on this amount.

[1] Equals amounts appropriated (estimated tax collections, subsequently adjusted). Includes deposits by States under voluntary coverage agreements and deductions for refund of estimated employee-tax overpayment. Early years reflect appropriation bases.

[2] Transfers (principal only) from the railroad retirement account with respect to contributions for disability insurance coverage of railroad workers.

[3] From 1950-51, for benefits with respect to certain World War II veterans. Beginning 1966, for military wage credits, and beginning December 1968, for military credits and Federal payment for special age-72 benefits; see footnote 4.

[4] Includes interfund transfer of interest on reimbursed administrative expenses 1958 to date (see footnote 6).

[5] Before deductions for (1) SMI premium payments and, when applicable, (2) recoupment of overpayments of hospital and medical service benefits provided to OASI beneficiaries. Includes special benefits for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[6] The purpose of the financial interchange provisions of the Railroad Retirement Act, as amended, is to place the trust funds in the same position in which they would have been had railroad employment always been covered under OASDHI. Negative figures represent transfers to OASI trust fund. Excludes transfers to HI trust fund for hospital insurance coverage of railroad workers (accounted for in table M-7).

[7] Beginning 1951, adjusted for reimbursement to trust fund of small amounts for gifts, sales, or services. Beginning 1953, includes expenses for central and regional office building construction. Except for reimbursements from the appropriate trust fund to Treasury Department for its expenses as incurred, beginning 1957 administrative expenses for OASI and DI were paid initially from OASI trust fund with subsequent reimbursement, plus interest (see footnote 3), from DI trust fund for allocated cost of DI operations. Beginning 1966, subject to subsequent adjustment among all 4 social security trust funds for allocated cost of each operation.

[8] Book value: includes net unamortized premium and discount, accrued interest purchased, and repayment of interest accrued on bonds at time of purchase.

[9] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[10] Public Law 96-403 approved October 9, 1980, provides for the reallocation of social security tax receipts between the OASI and DI trust funds for calendar years 1980-81. Transfers from the DI to the OASI fund were required to implement the change retroactive to January 1980. A $3,528,795,000 transfer in October 1980 represented the accumulated tax receipts, and a $120,801,000 transfer in April 1981 was the interest earned on this amount.

[1] Represents amounts appropriated (estimated tax collections with suitable subsequent adjustments) after deductions for refund of estimated amount of employee-tax overpayment; and, beginning July 1973, premiums for coverage of uninsured individuals aged 65 and over.

[2] Transfers (principal only) from the railroad retirement account with respect to contributions for hospital insurance coverage of railroad workers.

[3] Represents Federal Government transfers from general funds appropriations to meet costs of benefits for persons not insured for cash benefits under OASDHI or railroad retirement and for costs of benefits arising from military wage credits.

[4] Interest and profit on investments after transfers of interest or reimbursed administrative expenses (see footnote 6) and interest on amounts transferred from railroad retirement account (see footnote 3).

[5] Represents (1) payment vouchers on letters of credit issued to fiscal intermediaries under sec. 1816 and (2) direct payments to providers of services under sec. 1815 of the Social Security Act.

[6] Subject to subsequent adjustment among all 4 social security trust funds for allocated cost of each operation. Fiscal year 1966 includes "tool-up" period from date of enactment of Social Security Amendments of 1965 (July 20).

[7] Book value: Includes net unamortized premium and discount, and, when applicable, accrued interest purchased and repayments on accounts of interest accrued on bonds at time of purchase.

[8] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

---

[1] Represents voluntary premium payments from and in behalf of the insured aged and (beginning July 1973) disabled.

[2] Represents Federal Government transfers from general funds appropriations to match aggregate premiums paid.

[3] Represents interest and profit on investments, after transfers of interest on reimbursed administrative expenses (see footnote 5).

[4] Represents payment vouchers on letters of credit issued to carriers under section 1842 of the Social Security Act.

[5] Subject to subsequent adjustment among all 4 social security trust funds for allocated cost of each operation. Fiscal year 1966 includes "tool-up" period from date of enactment of Social Security Amendments of 1965 (July 30).

[6] Book value: Includes net unamortized premium and discount, and, when applicable, accrued interest purchased and repayments on account of interest accrued on bonds at the time of purchase.

[7] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[1] At the end of 1980 an estimated 40,000 Railroad Retirement beneficiaries would have been eligible for Social Security benefits had they applied. These persons receive their Social Security benefits as part of their Railroad Retirement annuity and are not included in the above tabulations. Of these 40,000 beneficiaries, 19,000 were retired workers, 5,500 were disabled workers, and 15,500 were spouses and children.

[2] Benefits paid from the OASI trust fund to retired workers and their spouses and children and to all survivors. Includes special benefits authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[3] Benefits paid from the DI trust fund to disabled workers and their spouses and children.

## Table M-10.—OASDI cash benefits: Number of monthly benefits in current-payment status for retired workers and their spouses and children and for survivors, 1940–82

[1] Persons aged 65 and over (and aged 62–64, beginning 1956 for women and 1961 for men).

[2] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[5] Includes, beginning September 1965, widows aged 60–61 and entitled surviving divorced wives aged 60 and over; beginning March 1968, disabled widows aged 50–59 and disabled widowers aged 50–61; and, beginning January 1973, nondisabled widowers aged 60–61.

[6] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

## Table M-11.—OASDI cash benefits: Amount of monthly benefits in current-payment status for retired workers and their spouses and children and for survivors, 1940–82

[In thousands]

| At end of selected month | Total | Retired workers [1] | Wives and husbands [1] [2] | Children [3] | Widowed mothers [4] | Widows and widowers [1] [5] | Parents [1] | Persons with special age-72 benefits [6] |
|---|---|---|---|---|---|---|---|---|
| December: | | | | | | | | |
| 1940 | $4,070 | $2,539 | $361 | $668 | $402 | $90 | $11 | .......... |
| 1945 | 23,801 | 12,538 | 2,040 | 4,858 | 2,391 | 1,893 | 81 | .......... |

---

[1] Persons aged 65 and over (and aged 62–64, beginning 1956 for women and 1961 for men).

[2] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[5] Includes, beginning September 1965, widows aged 60–61 and entitled surviving divorced wives aged 60 and over; beginning March 1968, disabled widows aged 50–59 and disabled widowers aged 50–61; and, beginning January 1973, nondisabled widowers aged 60–61.

[6] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

**Table M-12.**—OASDI cash benefits: Monthly benefits in current-payment status for disabled workers and their spouses and children, 1957–82

| At end of selected month | Number | | | | Amount (in thousands) | | | |

---

[1] Some years shown in several parts because of amendments changing the benefit provisions.

[2] Persons aged 65 and over (and aged 62–64, beginning 1956 for women and 1961 for men).

[3] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[4] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[5] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[6] Includes, beginning September 1965, widows aged 60–61 and entitled surviving divorced wives aged 60 and over; beginning March 1968, disabled widows aged 50–59 and disabled widowers aged 50–61; and, beginning January 1973, nondisabled widowers aged 60–61.

[7] July 1957–October 1960, disabled workers aged 50–64; beginning November 1960, disabled workers under age 65.

[8] Includes wife beneficiaries under age 65 with entitled children in their care, and, beginning September 1965, entitled divorced wives.

[9] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

## Table M-14.—OASDI cash benefits: Estimated number of beneficiaries with monthly benefits in current-payment status, by age group and by type of benefit, 1940–82

[In thousands. Adjusted to exclude duplication arising from dual entitlement: See the **1980 Annual Statistical Supplement,** p. 9]

[1] At the end of 1980 an estimated 40,000 Railroad Retirement beneficiaries would have been eligible for Social Security benefits had they applied. These persons receive their Social Security benefits as part of their Railroad Retirement annuity and are not included in the above tabulations. Of these 40,000 beneficiaries, 19,000 were retired workers, 5,500 were disabled workers, and 15,500 were spouses and children.

[2] Includes spouses and children of disabled workers.

[3] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[4] Fewer than 500.

[5] November data; December data not available.

| January | 361,332 | 196,272 | 35,844 | 69,303 | 8,707 | 51,080 | 54 | 72 |

[1] Persons aged 65 and over (and aged 62-64, beginning 1956 for women and 1961 for men).

[2] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18-21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[5] Includes, beginning September 1965, widows aged 60-61 and entitled surviving divorced wives, aged 60 and over; beginning March 1968, disabled widows aged 50-59 and disabled widowers aged 50-61; and, beginning January 1973, nondisabled widowers aged 60-61.

[6] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[7] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

[8] The June awards include only those with the new benefit rates.

## Table M-16.—OASDI cash benefits: Number of monthly benefits awarded to retired workers and their spouses, by payment status at time of award, 1950-82

[Number of awards in thousands]

| Period | Retired workers | | | Wives and husbands | | |
|---|---|---|---|---|---|---|
| | Total awards [1] | Currently payable awards | | Total awards [1] | Currently payable awards | |
| | | Number | Percent of total | | Number | Percent of total |

| December | 118 | 100 | 85 | 27 | 23 | 85 |
| 1982 | | | | | | |
| January | 196 | 174 | 89 | 36 | 30 | 83 |

[1] Includes awards currently payable and conditional or deferred awards. Conditional or deferred awards are those suspended immediately following determination, chiefly because of earnings of the beneficiary or the worker on whose account benefits are paid; since September 1965 most conditional and deferred awards have been made primarily for the purpose of assuring eligibility for hospital insurance benefits.

[2] Estimated on basis of awards for 10 months.

[3] Data not available.

[4] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

[5] The June awards include only those with the new benefit rates.

## Table M-17.—OASDI cash benefits: Number of monthly benefits awarded to disabled workers and their spouses and children, 1957-82

| Period | Total | Disabled workers [1] | Wives and husbands [2] | Children [3] |

| July | 65,667 | 29,175 | 8,208 | 28,284 |
| August | 61,021 | 27,254 | 7,711 | 26,056 |
| September | 64,624 | 28,882 | 7,778 | 27,964 |
| October | 66,425 | 29,173 | 7,960 | 29,292 |
| November | 62,982 | 28,124 | 7,745 | 27,113 |
| December | 56,097 | 24,829 | 6,969 | 24,299 |
| 1982 | | | | |
| January | 62,562 | 28,317 | 7,601 | 26,644 |

[1] July 1957–October 1960, disabled workers aged 50–64; beginning November 1960, disabled workers under age 65.

[2] Mainly wives under age 65 with entitled children in their care.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18-21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

[5] The June awards include only those with the new benefit rates.

**Table M-18.**—Supplemental Security Income for the aged, blind, and disabled: Number of persons receiving federally administered payments and total amount, by reason for eligibility, January 1982

| Reason for eligibility | All persons | Amount of payments (in thousands) | | |
|---|---|---|---|---|
| | | Total | Federal SSI | State supplementation [1] |
| Total | 4,019,048 | $740,100 | $578,260 | $161,841 |
| Aged | 1,675,396 | 231,624 | 168,776 | 62,848 |
| Blind | [2] 78,624 | 18,025 | 13,044 | 4,981 |
| Disabled | [3] 2,265,028 | 490,451 | 396,440 | 94,011 |

[1] Excludes payments for State supplementation under State-administered programs.

[2] Includes approximately 24,000 persons aged 65 and over.

[3] Includes approximately 419,000 persons aged 65 and over.

**Table M-19.**—Supplemental Security Income for the aged, blind, and disabled: Number of persons initially awarded federally administered payments, by reason for eligibility, 1974–81

---

[1] Data reported to the Social Security Administration by individual States. All data subject to revision. Excludes optional supplementation data for North Dakota; for Maryland in December 1974 and 1975; and for New Mexico in December 1976.

[2] Includes data for some States not distributed by reason for eligibility.

[3] Excludes data for South Carolina.

[4] Revised data.

## Table M-26.—Supplemental Security Income for the aged, blind, and disabled: Number of persons receiving State-administered State supplementation and total average amount, by reason for eligibility and State, November 1981[1]

| State | Number of persons | | | | Total amount (in thousands) | | | | Average payment | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | Total | Aged | Blind | Disabled | Total | Aged | Blind | Disabled | Total | Aged | Blind | Disabled |
| Total | [2] 250,062 | 133,581 | 3,477 | 105,663 | [2] $19,369 | $9,741 | $345 | $9,133 | [2] $77.46 | $72.92 | $99.24 | $86.43 |
| Alabama | 16,711 | 12,363 | 126 | 4,222 | 902 | 657 | 7 | 238 | 53.96 | 53.14 | 54.61 | 56.35 |
| Alaska [3] | 928 | 379 | 12 | 537 | 125 | 47 | 2 | 76 | 135.23 | 124.77 | 172.42 | 141.79 |
| Arizona | 1,657 | 977 | 4 | 676 | 110 | 83 | (4) | 26 | 66.17 | 85.41 | (5) | 38.41 |
| Colorado | 33,917 | 23,750 | 143 | 10,024 | 2,662 | 2,055 | 4 | 603 | 78.49 | 86.51 | 31.55 | 60.16 |

[1] Represents data for payments to recipients of the specified type of assistance under separate programs and under the combined State adult assistance programs. Superseded by supplemental security income program in the 50 States and the District of Columbia, beginning January 1974.

[2] Beginning September 1965, excludes State blind pension program in Pennsylvania administered under State law without Federal participation.

[3] Includes as recipients the children and 1 or both parents or 1 caretaker relative other than a parent in families in which the requirements of such adults were considered in determining the amount of assistance.

[4] Data incomplete.

[5] Represents average per family. Beginning January 1972, includes New York City.

## Table M-29.—Public assistance: Total money payments, by program and emergency assistance, 1945–80

[In thousands. Data subject to revision.]

| Period | Total [1] | Money payments | | | | | | Emergency assistance payments [4] |
|---|---|---|---|---|---|---|---|---|
| | | Total [2] | Old-age assistance [3] | Aid to the blind [3] | Aid to the permanently and totally disabled [3] | Aid to families with dependent children | General assistance | |

---

[1] Includes money payments for institutional services in intermediate-care facilities for 1968–71.

[2] Includes money payments for medical assistance for the aged for 1960–69.

[3] Superseded by supplemental security income program in the 50 States and the District of Columbia beginning 1974. Data for 1974 and thereafter are for only Guam, Puerto Rico, and the Virgin Islands.

[4] Money payments to families and medical vendor payments to needy families with children, authorized under title IV of the Social Security Act.

## **Table M-30.**—Aid to Families with Dependent Children: Recipients of cash payments and total amount, by State, December 1980

[Includes nonmedical vendor payments, unemployed father segment, and AFDC foster-care data]

[1] Data not reported by some States because (1) programs are administered by townships and local areas and reports are not available, or (2) counties are unable to report on their State-assisted programs, or (3) program has been suspended. New Jersey data includes assistance under the "Insufficient Employment of Parents" program; Maryland data includes a State program of assistance to families with dependent children. In other States the program covers "home relief," "general welfare," "relief," etc.—State and local programs not federally aided.

[2] Data estimated.

[3] Not computed on base of fewer than 100 recipients.

**Table M-35.—Black lung benefits: Number of beneficiaries, average monthly family amount, and total monthly family amount in current-payment status, 1970–82**[1]

| At end of selected month | Number of beneficiaries | | | | Average monthly family amount | | | Total monthly family amount (in thousands) | | |

[1] Benefits payable under the "black lung" program established by the Federal Coal Mine Health and Safety Act of 1969. The program is administered by the Social Security Administration but is financed from the general funds of the Treasury.

[2] Includes benefits for dependent wife and/or child.

[3] Includes benefits for dependent child of widow, surviving child, parent, brother, and sister.

## Table M-36.—Unemployment insurance: Selected data on State programs, 1940–81

[Excludes programs for Federal employees and for ex-servicemen; includes unemployment compensation for State and local government employees where covered by State law]

| Period | Average weekly insured employment [1] | | Initial claims (weekly average) [4] | All types of compensated unemployment | | | | Average weekly benefit for total unemployment [6] | Number of claimants exhausting benefits | Funds available for benefits end of period [7] (in thousands) |
|---|---|---|---|---|---|---|---|---|---|---|
| | Number of workers [2] | Percent of covered employment [3] | | Number of first payments | Weeks compensated | Benefits paid [5] (in thousands) | Average weekly number of beneficiaries | | | |
| 1940 | 1,282,385 | 5.6 | 214,231 | 5,220,073 | 51,084,375 | $518,700 | 982,392 | $10.56 | 2,596,129 | $1,817,108 |

[1] Beginning July 1963, includes Puerto Rican sugarcane workers' program.

[2] Workers reporting completion of at least 1 week of unemployment.

[3] Annual rates based on average covered employment in specified year; monthly rates on average for most recent 12-month period.

[4] Notices filed by workers to indicate they are starting periods of unemployment. Excludes transitional claims.

[5] Annual data, but not monthly, adjusted to exclude voided benefit checks and transfers under interstate combined-wage plan. Through 1970, includes payments under State (but not Federal) temporary extended unemployment insurance provisions; beginning 1971, excludes such payments.

[6] Includes dependents' allowances in States that provide such benefits.

[7] Sum of balances in State clearing accounts, benefit-payment accounts, and State accounts in Federal unemployment trust fund.

[8] Data not available.

---

[1] Workers reporting completing at least 1 week of unemployment.

[2] Based on average covered employment for most recent 12-month period.

[3] Notices filed by workers to indicate they are starting periods of unemployment. Excludes transitional claims.

[4] Voided benefit checks and transfers under interstate combined-wage plan not deducted. Excludes payments under temporary unemployment insurance provisions.

[5] Includes dependents in States that provide such benefits.

[6] Includes data under the Puerto Rican sugarcane workers' program for average insured unemployment and initial claims (sugarcane data not available for other items).

[1] Monthly data represents amount at annual rate.

[2] Includes payments in kind; includes pay of Federal civilian and military personnel in all areas.

[3] Includes government transfer payments to beneficiaries under OASDHI, railroad retirement, public employee retirement, unemployment insurance, MDTA training allowance, trade adjustment assistance, "black lung," and veterans' pensions and compensation programs; cash and medical payments under workers' compensation and temporary disability insurance; and court-awarded benefits for work injuries sustained by railroad, maritime, and other workers under Federal employer liability acts.

[4] Includes government transfer payments to recipients of direct relief under programs of old-age assistance, aid to families with dependent children, aid to the blind, aid to the permanently and totally disabled, and general assistance. Excludes payments made in behalf of recipient to suppliers of medical care (vendor payments). Beginning 1961, includes bonus value of food stamps. Beginning 1974, includes supplemental security income payments.

[5] Includes proprietors' income, dividends, personal interest, and rental income; other transfer payments not enumerated in footnotes 2 and 3 (such as Government life insurance payments. World War bonus payments, mustering-out pay and terminal-leave benefits to discharged servicemen, subsistence allowances to veterans at school); and employer contribution to private pensions and welfare funds and other labor income (except compensation for injuries).

[6] Includes life insurance premium payments for veterans.

[7] Data revised March 1981.

[1] Includes Alaska and Hawaii for all years. Annual data are estimated as of July 1. Data not adjusted for errors of coverage and of age misreporting.

[2] Annual data are averages of monthly figures. Beginning 1960, includes Alaska and Hawaii. Data for 1950 and 1955 adjusted to reflect definitions adopted January 1957; two groups (those on temporary layoff and those waiting to start new wage and salary jobs within 30 days) formerly classified as employed—with a job, not at work—were assigned to other classifications, chiefly to the unemployed. Beginning 1962, comparability with previous years affected somewhat by the introduction of material from the 1960 Census (level of labor force and employment lowered by about 150,000). Before January 1967, series show aged 14 and over.

Source: Population data from Bureau of the Census, Department of Commerce. Labor-force data from Bureau of Labor Statistics, Department of Labor.

## Table M-40.—Consumer Price Index for urban and clerical workers, 1940-81[1]

[1967 = 100; yearly data are annual averages]

| Period | All items | All items less medical care | Medical care | Food | Apparel and upkeep | Housing | Transportation | Personal care | Reading and recreation | Other goods and services | All services |

[1] Beginning January 1978, the Bureau of Labor Statistics introduced a new index for all urban consumers and a revised index for urban wage earners and clerical workers, both of which form a continuous series with the unrevised consumer price index, as of December 1977. For changes in titles of components and in definitions, see Bureau of Labor Statistics, **CPI Detailed Report, January 1978,** pages 7-8.

Staff Paper No. 42.—**Private Pension Coverage and Vesting by Race and Hispanic Descent, 1979,** by Gayle Thompson Rogers, 24 pages.

- This publication examines differences in coverage and vesting under private pension plans in 1979 among white, black, and Hispanic private wage and salary workers aged 14 and older. It looks at these differences within demographic and labor-force characteristics and provides a profile of workers protected and not protected by the private pension system.
- Black workers, as a group, are as likely as white workers to be covered by private pension plans. Racial differences exist, however, within certain subcategories of workers. Hispanic workers generally are less likely than white workers to be covered, although this is not true for all subgroups of the Hispanic population.

The **Social Security Bulletin** is the official monthly publication of the Social Security Administration. Calendar-year data for each year 1939-48 were published in the **Social Security Yearbooks** and, beginning with data for 1949, in the **Annual Statistical Supplements** to the **Bulletin**. (The **Supplements** with data for each year 1949-54 were included in the September **Bulletin**, 1950-55; beginning with 1955 data, the **Supplement** is a separate publication.) Statements in **Bulletin** articles do not necessarily reflect official policies of the Social Security Administration.

The **Bulletin** is prepared in the Office of Research and Statistics, Office of Policy, Social Security Administration, under the general supervision of Robert Robinson, Chief of the Publications Staff, and the editorial supervision of Marilyn Thomas. Suggestions or comments concerning the **Bulletin** should be addressed to the Office of Research and Statistics.

The **Social Security Bulletin** is for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. A copy of the **Supplement** is included in the annual subscription price of the **Bulletin**.

Price: $22.00 a year in the United States and $27.50 in all other countries; single copies, $3.50 domestic and $4.40 foreign. Price of the 1980 **Supplement** is $5.50 domestic and $6.90 foreign.

Use of funds for printing this publication has been approved by the Office of Management and Budget.

## Public Statements by Secretary Schweiker and Commissioner Svahn

Richard S. Schweiker, Secretary of Health and Human Services, and John A. Svahn, Commissioner of Social Security, recently released public statements giving their views on two issues of importance to the Social Security program.

On April 7, Secretary Schweiker noted that many nonprofit hospitals are "being swayed by presentations from private insurance organizations" into making "hasty and sometimes uninformed decisions" to replace Social Security with lower-cost commercial coverage for their employees. His comments, which were later released to the public, were directed to John J. Sweeney, president of the Service Employees International Union (SEIU), who had written the Secretary that the trend "poses a threat to both Social Security and Medicare." Sweeney's union represents workers at about 1,000 hospitals.

"We believe that Social Security cannot be completely replaced," the Secretary wrote. "There are private plans that can provide protection at a lower cost. But few can effectively provide benefits that increase as inflation goes up. Few can duplicate Social Security's medical insurance for the long-term disabled under 65 or the portability of Social Security retirement, disability, and survivor coverage when employees change jobs."

Although Social Security coverage is mandatory for most employees and employers, it is optional for State and local governments and nonprofit organizations, which may withdraw from the program after giving a 2-year notice of their intention to do so. Currently, 271 nonprofit hospitals with 192,000 employees have withdrawal notices pending. If all were to leave the program, it would cost the Social Security Trust Funds $334 million a year in revenues. Secretary Schweiker expressed confidence that many of the hospitals would drop their requests before the 2-year period expires. (At the end of 1981, there were an additional 272 withdrawal notices pending from religious, charitable, or educational organizations.)

Observing that "there is a substantial industry around the country" seeking to convince hospital administrators to withdraw from the Social Security program, Commissioner Svahn said in an interview that SSA officials have met with officials of the SEIU to discuss the union's concerns. The Social Security Administration has a special staff that works closely with hospitals and other nonprofit organizations that are considering withdrawal from the program.

On April 28, Secretary Schweiker and Commissioner Svahn issued a joint statement announcing their support of legislation in Congress that would permit certain Disability Insurance beneficiaries to continue receiving benefits during the first level of the appeals process and allow face-to-face contact during the initial appeals process. The changes would apply to Disability Insurance beneficiaries whose benefits had been terminated because of a finding at the initial decision level that they had medically recovered.

## Program Operations

### OASDI Benefits

At the end of February 1982, the Old-Age, Survivors, and Disability Insurance (OASDI) program was paying $12.3 billion in monthly cash benefits to 36,123,025 beneficiaries--an increase of $1.5 billion in the total monthly benefits payable and 332,000 in the number of beneficiaries since February 1981. The OASI program accounted for 95 percent of the rise in the amount of monthly benefits and 100 percent of the increase in the number of beneficiaries. Retired workers were 20,332,241, or 56 percent of the total number of OASDI beneficiaries.

During the 12-month period ended February 1982, the monthly amount of OASI and DI benefits rose 15 percent and 6 percent, respectively. The number of OASI beneficiaries increased 2 percent while the number of DI beneficiaries decreased 7 percent.

Average monthly benefit amounts payable in February 1982 to retired and disabled workers were $386.81 and $412.66, respectively. A year earlier, average benefits were $342.89 for retired workers and $371.10 for disabled workers.

The number of monthly cash benefits awarded in February 1982 totaled 323,131. Eighty-eight percent of all awards and 86 percent of awards to retired workers were immediately payable. The average monthly benefit amounts for currently payable awards were $347.27 for retired workers and $418.09 for disabled workers.

| OASDI | February 1982 | January 1982 | February 1981 |
|---|---|---|---|
| **Monthly beneficiaries, total** (in thousands) | 36,123 | 36,082 | 35,791 |
| Aged 65 and over, total | 24,507 | 24,472 | 23,886 |

| Aged widows and widowers | 346.77 | 346.48 | 308.67 |
| Children of deceased workers | 271.42 | 271.08 | 240.36 |
| **Average benefits awarded:** | | | |
| Retired workers | $371.73 | $410.28 | $359.48 |
| Disabled workers | 417.79 | 419.90 | 389.29 |
| Aged widows and widowers | 344.41 | 347.73 | 307.07 |
| Children of deceased workers | 265.93 | 265.95 | 239.60 |

[1] In current-payment status; excludes lump-sum and retroactive payments and adjustments.

## SSI Payments

**Federally administered payments.** In February 1982, 3,999,700 persons received federally administered Supplemental Security Income (SSI) payments, a decline of 19,300 from the January total. The number of aged recipients decreased by 12,700, the disabled by 6,400, and the blind by 300. This marked the first time since 1975 that the overall SSI caseload dropped below 4 million.

Federally administered payments in February totaled $723.6 million, down $16.5 million from the previous month. Federal SSI payments of $567.1 million and State supplementation payments of $156.5 million decreased by $11.2 million and $5.3 million, respectively.

**State-administered supplementary payments.** In December 1981, the number of persons receiving State-administered supplementation dropped slightly from the November total to 249,600. Despite this decline, the amount expended for these State payments increased from $19.4 million in November to $20.0 million in December. The average monthly State payment also increased from $77 per recipient in November to $80 per recipient in December.

# Actuarial Status of the Old-Age and Survivors Insurance and Disability Insurance Trust Funds

by Harry C. Ballantyne*

The 1982 Annual Report of the Board of Trustees of the Old-Age and Survivors Insurance (OASI) and Disability Insurance (DI) Trust Funds indicates severe financial problems in both the short and the long range. The short-range financial status is significantly worse than was estimated last year, after enactment of the 1981 legislation, because of continuing unfavorable economic conditions. The estimated long-range deficit is the same as the deficit that was estimated last year before the 1981 legislation and is therefore somewhat worse than was estimated immediately after enactment of the legislation. Under present law, which authorizes temporary interfund borrowing among the OASI, DI, and Hospital Insurance (HI) Trust Funds, the OASI Trust Fund would become unable to pay benefits on time by July 1983. The assets of the DI Trust Fund, on the other hand, are expected to grow rapidly in both the short and long range. If the assets of both the OASI and DI Trust Funds were combined, however, the two funds would still become unable to pay benefits on time by the latter half of 1983, based on all four sets of economic and demographic assumptions in the 1982 report. Even if the temporary interfund borrowing authority in present law were extended, the combined assets of the OASI, DI, and HI Trust Funds would become insufficient to pay benefits on time by 1984, based on the two less favorable sets of assumptions in the 1982 report. Based on the other two, more favorable, sets of assumptions, the three combined funds could pay benefits on time through the 1980's, but there would be little or no margin of safety to permit timely payment of benefits if economic conditions are even slightly less favorable.

This article discusses the current financial and actuarial status of the Old-Age and Survivors Insurance (OASI) and Disability Insurance (DI) Trust Funds, based on the 1982 trustees report for these funds[1] and on the calculations underlying this report. Because of the new interfund borrowing provisions (discussed on page 6), some aspects of the Hospital Insurance (HI) Trust Fund are also discussed. All figures are on a calendar year basis and are for the OASDI program as it is now structured in the present law.

Table 1 shows the payroll tax rates for employers and employees as established by law. Taxes at these rates are paid on each worker's earnings up to $32,400 in 1982. In future years, the Social Security earnings base will rise as average wages increase. For the self-employed, the OASDI tax rates are about 1 1/2 times the rates for employees, and the HI tax rates are the same as for employees.

It is intended that the income for each program will closely match outgo in most years. When income exceeds outgo, the excess serves to increase the trust funds. When outgo exceeds income, the trust funds are drawn down. Thus, the trust funds serve as a contingency reserve to absorb temporary fluctuations in income

---

**Table 1.**—Payroll tax schedule: Contribution rates payable by employer and employee (each)

[Percent of taxable earnings]

| Calendar year | OASDI |  |  | HI | Total |
|---|---|---|---|---|---|
|  | OASI | DI | Total |  |  |
| 1981 | 4.70 | 0.65 | 5.35 | 1.30 | 6.65 |
| 1982-84 | 4.575 | .825 | 5.4 | 1.30 | 6.70 |
| 1985 | 4.75 | .95 | 5.7 | 1.35 | 7.05 |
| 1986-89 | 4.75 | .95 | 5.7 | 1.45 | 7.15 |
| 1990 and later | 5.10 | 1.10 | 6.2 | 1.45 | 7.65 |

and outgo. The trust funds are invested in U.S. Government bonds, notes, and other securities that bear interest rates similar to those for long-term securities issued to the general public.

## Current Status

During 1981, 116 million workers contributed to the OASDI and HI programs through payroll taxes. At the end of 1981, approximately 36 million OASDI beneficiaries were receiving monthly benefit payments.

Table 2 presents a summary of the recent financial operations for the OASDI program. Included are the cash income, outgo, and changes in assets that occurred during 1980 and 1981. In 1981, income to the OASDI Trust Funds was $142.4 billion and outgo was $144.4 billion. As a result, the OASDI Trust Funds dropped by $1.9 billion. Administrative expenses represented about 1.2 percent of benefit payments for OASDI. The 1980 figure was 1.3 percent.

Table 3, which summarizes operations of the OASDI Trust Funds over the past 11 years, shows that 1981 was the seventh consecutive year that the combined OASDI funds decreased, after they had reached a high point of $45.6 billion at the end of 1974. These decreases have occurred despite a series of amendments to the Social Security Act, beginning in 1977, aimed at strengthening the program's short-range financing.

The Social Security Act was most recently amended in 1981 to reduce the projected costs of the program and to allow temporary interfund borrowing. Such borrowing permits loans among the OASI, DI, and HI funds, at the discretion of the Managing Trustee. Interfund borrowing may not be done after December 31, 1982, however, and may not go beyond the levels needed to assure the timely payment of benefits for the first 6 months of 1983.

**Table 2.**—Financial operations of the OASDI Trust Funds during calendar years 1980 and 1981

[In billions]

| Item | 1981 OASDI |  |  | 1980 OASDI Total |
|---|---|---|---|---|
|  | OASI | DI | Total |  |
| Assets at beginning of year | $22.8 | $3.6 | $26.5 | $30.3 |
| Income in year, total | 125.4 | 17.1 | 142.4 | 119.7 |
| Tax contributions | 122.6 | 16.7 | 139.4 | 116.7 |
| Interest | 2.1 | 0.2 | 2.2 | 2.3 |
| General Fund of Treasury | 0.7 | 0.2 | 0.8 | 0.7 |
| Outgo in year, total | 126.7 | 17.7 | 144.4 | 123.6 |
| Benefit payments [1] | 123.8 | 17.2 | 141.0 | 120.6 |
| Administrative expenses | 1.3 | 0.4 | 1.7 | 1.5 |
| Transfers to Railroad Retirement account | 1.6 | (2) | 1.6 | 1.4 |
| Net change in assets | −1.3 | −0.6 | −1.9 | −3.8 |
| Assets at end of year | 21.5 | 3.0 | 24.5 | 26.5 |

[1] Includes cost of rehabilitation.

[2] Less than $0.05 billion.

Note: Components may not add to totals due to rounding.

Because of short- and long-range financial problems, the President established the National Commission on Social Security Reform in December 1981. The Commission is charged with reviewing the current and long-term financial condition of Social Security. In a report due December 31, 1982, the Commission is to provide appropriate recommendations to the Secretary of Health and Human Services, the President, and the Congress on long-term reforms to put Social Security back on a sound financial footing.

## Actuarial Cost Projections

As required by law, the annual trustees reports contain projections of each fund's estimated financial operations and status. For the OASDI program, these estimates extend over the next 75 years. The projected costs after the first few years are presented as percentages of taxable payroll. Such projections allow expenditures to be compared directly with payroll tax rates. Since precise prediction of the future is not possible—even in the short range—both short- and long-range estimates are made using various sets of reasonable assumptions to indicate the trend and general range of future costs.

**Table 3.**—Combined OASI and DI Trust Fund operations, calendar years 1970–81

[Amounts in billions]

| Calendar Year | Income | Outgo | Increase in funds | Assets at end of year | Assets at beginning of year as a percentage of outgo during year |
|---|---|---|---|---|---|
| 1970 | $37.0 | $33.1 | $3.9 | $38.1 | 103 |
| 1971 | 40.9 | 38.5 | 2.4 | 40.1 | 99 |
| 1972 | 45.6 | 43.3 | 2.3 | 42.8 | 93 |
| 1973 | 54.8 | 53.1 | 1.6 | 44.4 | 80 |
| 1974 | 62.1 | 60.6 | 1.5 | 45.6 | 73 |
| 1975 | 67.6 | 69.2 | −1.5 | 44.3 | 66 |
| 1976 | 75.0 | 78.2 | −3.2 | 41.1 | 57 |
| 1977 | 82.0 | 87.3 | −5.3 | 35.9 | 47 |
| 1978 | 91.9 | 96.0 | −4.1 | 31.7 | 37 |
| 1979 | 105.9 | 107.3 | −1.5 | 30.3 | 30 |
| 1980 | 119.7 | 123.6 | −3.8 | 26.5 | 25 |
| 1981 | 142.4 | 144.4 | −1.9 | 24.5 | 18 |

Note: Components may not add to totals due to rounding.

## Assumptions Used

Future OASDI income and outgo will depend on mortality, fertility, unemployment, inflation, and other economic and demographic factors. This year's projections were prepared using four different sets of assumptions regarding these economic and demographic factors.

"Alternative I" reflects a relatively optimistic view of the external factors that determine Social Security costs. "Alternative II-A" assumes future economic performance consistent with the President's 1983 Budget assumptions; "Alternative II-B" assumes lower economic growth. "Alternative III" reflects a more pessimistic view of the factors that will determine Social Security costs. Table 4 shows selected values of several of the assumptions used in the four basic projections and describes these assumptions more fully. There is no assurance that experience will actually fall within the range of any of these assumptions. However, it is not considered likely that actual experience will lie outside the range of the assumptions.

Table 4.—Economic and demographic assumptions used to determine the four alternatives

| Calendar year | Percentage increase over previous year in average annual— Real GNP [1] | Wages in covered employment | Consumer Price Index | Average annual unemployment rate | Total fertility rate [2] |
|---|---|---|---|---|---|
| | Alternative I assumptions | | | | |
| 1982 ........ | 1.1 | 8.2 | 6.3 | 8.6 | 1.9 |
| 1985 ........ | 5.1 | 7.0 | 4.2 | 5.8 | 2.0 |
| 1995 ........ | 3.4 | 4.5 | 2.0 | 4.0 | 2.2 |
| 2005 and later...... | 3.4 | 4.5 | 2.0 | 4.0 | 2.4 |
| | Alternative II-A assumptions [3] | | | | |
| 1982 ........ | 0.3 | 8.6 | 6.8 | 8.9 | 1.9 |
| 1985 ........ | 4.8 | 7.4 | 4.8 | 6.4 | 1.9 |
| 1995 ........ | 3.0 | 5.0 | 3.0 | 5.0 | 2.0 |
| 2005 and later...... | 2.9 | 5.0 | 3.0 | 5.0 | 2.1 |
| | Alternative II-B assumptions | | | | |
| 1982 ........ | -0.8 | 6.6 | 6.9 | 9.1 | 1.9 |
| 1985 ........ | 3.0 | 6.9 | 6.6 | 7.7 | 1.9 |
| 1995 ........ | 2.5 | 5.5 | 4.0 | 5.0 | 2.0 |
| 2005 and later...... | 2.5 | 5.5 | 4.0 | 5.0 | 2.1 |
| | Alternative III assumptions | | | | |
| 1982 ........ | -1.5 | 6.3 | 7.2 | 9.3 | 1.8 |
| 1985 ........ | 3.8 | 9.2 | 9.2 | 8.8 | 1.8 |
| 1995 ........ | 1.8 | 6.2 | 5.2 | 6.0 | 1.8 |
| 2005 and later...... | 2.0 | 6.0 | 5.0 | 6.0 | 1.7 |

[1] Gross national product (GNP—the total output of goods and services) expressed in constant dollars. The percentage increase in real GNP is assumed to change after the year 2005. The values for the year 2060 are 3.4, 2.5, 2.1, and 1.0 percent for the Alternative I, II-A, II-B, and III assumptions, respectively.

[2] The number of children who would be born to a woman in her lifetime based on the birth rates at each age in the year shown.

[3] Alternative II-A uses the economic assumptions underlying the President's 1983 Budget, adjusted to reflect more recent data available on wages and prices.

## Measures of Actuarial Status

In analyzing the financial status of the program, several measures of actuarial status are commonly used. This terminology is defined below.

**Fund ratio.** The amount in the trust fund at the beginning of a year, expressed as a percentage of that year's expenditures, is the "fund ratio." For example, a fund ratio of 25 percent means that the amount in the fund at the beginning of a year is one-fourth of the outgo during the year (or enough to pay benefits for about 3 months in the absence of any income). At the beginning of 1982, the fund ratios for OASI, DI, and the two funds combined, were 15 percent, 16 percent, and 15 percent, respectively. Of course the ratio for any year can only be estimated before the year is completed and the amount of expenditures is known. Several factors should be considered in determining appropriate fund ratios:

(1) OASI and DI benefits are paid out early each month, but the income from payroll taxes is spread over the entire month. If the OASI or DI Trust Fund were to drop below the amount needed at the beginning of a month to pay benefits, the benefit checks could not be sent out in a timely manner. A fund ratio as low as 8 percent would usually imply inability to pay all benefits on time. In practice, a fund ratio of about 12-14 percent would mean that this point is near and that action may be needed very soon to strengthen the financing. And, to assure payment of benefits in the short range, substantially higher fund ratios would be needed.

(2) Payroll-tax receipts to the trust funds also fluctuate during the year (as do other items of income and outgo).

(3) Unforeseen changes in the economy may cause the trust funds to decrease unexpectedly. Each trust fund should have sufficient assets to avoid the need for hasty action to assure the payment of benefits.

**Cost rate.** The annual outgo or disbursements, expressed as a percentage of taxable payroll, is the "cost rate." The year-by-year cost rates can be used to establish tax-rate schedules that approximately support pay-as-you-go financing, taking into account interest income and the need to have adequate fund reserves.

**Actuarial balance.** The average difference between the scheduled tax rate (for employer and employee combined) and the cost rate, over a given period of time, is the "actuarial balance." The actuarial balance is the usual measure of financial status over periods of 25 years or more. The OASDI system is said to be in *close actuarial balance* over the long range if the average scheduled tax rates are 95–105 percent of the cost rates. The actuarial balance may show either a surplus or a deficit. For example, if the 75-year OASDI cost rate were 14 percent of payroll, and the average OASDI tax rate were 12 percent of payroll, there would be an actuarial deficit of 2 percent of payroll, and the system would not be in close actuarial balance since the tax rate is only 86 percent of the cost rate.

## Short-Range Financing (1982–86)

Table 5 shows 5-year projections for the amounts of money in the various trust funds under the four sets of assumptions. By using such cost projections, Congress and the Administration can monitor and adjust income to the programs. In this short-range period, the number of persons receiving OASDI benefits can be forecast closely. Changes in the national economy can have major effects on outgo and income, however, and are difficult to predict. A series of economic downturns more severe than anticipated have led to the current financial situation.

This year's trustees report confirms last year's warnings that remedial legislation is needed to keep the OASI Trust Fund from becoming depleted very soon. The interfund borrowing legislation enacted in 1981 provides a solution only until mid-1983. The amounts to be borrowed by the OASI fund during 1982, based on the four sets of assumptions, are shown in table 6.

The interfund borrowing authority expires at the end of 1982. Under this authority, the Managing Trustee is authorized to make loans among the three funds—OASI, DI, and HI. The amount that may be borrowed by one trust fund at any time in 1982 is limited to no more than the amount necessary to assure timely payment of benefits during the 6 months following the date of the loan.

**Table 5.**—OASDHI Trust Funds at beginning of year, under various economic assumptions, 1982–86

[In billions]

| Trust Fund(s) | Assumptions | | | |
|---|---|---|---|---|
| | Alternative I | Alternative II–A | Alternative II–B | Alternative III |
| OASI: | | | | |
| 1982 | $21.5 | $21.5 | $21.5 | $21.5 |
| 1983 | 15.4 | 15.7 | 16.8 | 17.5 |
| 1984 | 1.0 | –.8 | –2.6 | –6.4 |
| 1985 | –12.7 | –20.9 | –26.6 | –41.0 |
| 1986 | –18.4 | –35.9 | –50.5 | –78.9 |
| OASI and DI: | | | | |
| 1982 | 24.5 | 24.5 | 24.5 | 24.5 |
| 1983 | 16.9 | 17.2 | 18.4 | 19.0 |
| 1984 | 10.4 | 8.3 | 6.0 | 1.5 |
| 1985 | 7.4 | –1.7 | –8.6 | –25.0 |
| 1986 | 19.6 | .7 | –16.7 | –48.4 |
| OASI, DI, and HI: | | | | |
| 1982 | 43.3 | 43.3 | 43.3 | 43.3 |
| 1983 | 37.9 | 38.4 | 34.2 | 33.4 |
| 1984 | 33.5 | 31.3 | 22.5 | 15.6 |
| 1985 | 31.0 | 20.9 | 5.7 | –15.1 |
| 1986 | 43.4 | 21.9 | –6.4 | –46.1 |

**Table 6.**—Amounts to be borrowed by the OASI Trust Fund during 1982

[In billions]

| Borrowed from— | Alternative I | Alternative II–A | Alternative II–B | Alternative III |
|---|---|---|---|---|
| Total | $7.1 | $7.0 | $11.1 | $12.3 |
| DI fund | 6.2 | 6.3 | 5.7 | 5.6 |
| HI fund | 0.9 | 0.8 | 5.3 | 6.7 |

Thus, full use of this authority would permit the OASI Trust Fund to pay benefits on time through June 1983; under present law, the OASI fund would be unable to pay benefits on time beginning in July 1983. The OASI and DI Trust Funds, if combined, would be unable to pay OASDI benefits when due sometime later in 1983. Table 7 shows the dates when the various funds would no longer be able to pay timely benefits under current law.

Even if the OASI, DI, and HI Trust Funds were combined, they would be depleted in 1984 under the Alternative II–B assumptions, or as early as the end of 1983 under the pessimistic Alternative III assumptions. Under the Alternative II–A assumptions, the three combined trust funds would just barely be able to pay benefits on time through the 1980's, with no margin of safety for even slightly less favorable economic conditions.

The interfund borrowing provisions of the present law would have a favorable effect on the combined OASDI funds but would have an unfavorable effect on the HI fund. Under the present interfund borrowing law, the HI Trust Fund would be able to pay benefits without delay until a date ranging from 1986 to 1991, depending on the set of assumptions used. If interfund

**Table 7.**—Date when fund(s) could no longer pay benefits on time under current law

| Trust Funds | Alternative I | Alternative II–A | Alternative II–B | Alternative III |
|---|---|---|---|---|
| OASI | July 1983 | July 1983 | July 1983 | July 1983 |
| OASI and DI[1] | Late 1983 | Late 1983 | Late 1983 | Late 1983 |
| HI[2] | 1991 | 1989 | 1987 | 1986 |
| OASI, DI, and HI | . . . | . . . | 1984 | 1983–84 |

[1] Assuming current law were changed to allow extended interfund borrowing.

[2] If interfund borrowing were not permitted, dates for the HI fund would be extended by approximately 5 weeks or less, depending on the assumptions used.

borrowing had not been permitted, however, it is estimated that these dates for exhaustion of the HI fund would be extended by up to about 5 weeks, again depending on the set of assumptions used.

Chart 1 shows the projected fund ratios through 1991 for the three funds combined. Even on this basis, which assumes the law would be changed to allow unlimited interfund borrowing, there is a need to strengthen the short-range financing. The combined funds would barely get through the early 1980's under the two more favorable sets of assumptions, and under the other two less favorable projections, the combined funds would be used up within a few years. Thus, any reallocation of the tax rates or borrowing among the trust funds would not result in adequate short-range financing under adverse conditions, and so would be unsatisfactory.

## Long-Range Financing (1982–2056)

Long-range cost estimates for OASDI over the next 75 years, although sensitive to variations in the assumptions, give the best available indication of the trend and general range of the program's cost. Several important long-range demographic trends, which are already under way, are anticipated to raise the proportion of the aged in the population over the next 75 years:

(1) Because of the large number of persons born shortly after World War II, rapid growth is expected in the aged population after the turn of the century.

(2) Projected improvements in mortality also would increase the number of aged persons. Table 8 illustrates the improvement in life expectancies that is anticipated, based on the Alternatives II–A and II–B.

(3) At the same time, low birth rates would hold down the number of young people.

**Table 8.**—Past and projected life expectancies[1] based on Alternatives II–A and II–B

| Calendar year | At birth |  | At age 65 |  |
|---|---|---|---|---|
|  | Men | Women | Men | Women |
| 1940 | 61.1 | 65.6 | 12.0 | 13.7 |
| 1960 | 66.7 | 73.4 | 13.0 | 16.1 |
| 1980 | 69.8 | 77.7 | 14.3 | 18.7 |
| 2000 | 72.9 | 81.1 | 15.8 | 21.1 |
| 2020 | 73.8 | 82.1 | 16.4 | 22.0 |
| 2040 | 74.6 | 83.1 | 17.0 | 22.8 |
| 2060 | 75.4 | 84.1 | 17.6 | 23.6 |

[1] Life expectancy is the average number of years of life remaining, based on the death rates at each age in the year shown.

Chart 2 shows the long-range trend in the number of OASDI beneficiaries per 100 covered workers, based on the three sets of demographic assumptions. (Both Alternatives II–A and II–B are based on the same set of demographic assumptions.) It is important to note that "beneficiaries" includes not only retired workers, but also disabled workers, spouses, children, and survivor beneficiaries. This ratio has gone up from zero in 1940 to 31 currently. It is estimated to rise to a range of 39 to 76 by the middle of the next century. Because most of the beneficiaries during the next 75 years have already been born, their numbers are projected mainly from the present population. The number of workers in these projections, however, depends on future birth rates, which are subject to more variability.

Chart 3 shows the trend in the estimated annual OASDI cost rate (outgo as a percentage of taxable payroll) under each of the four sets of assumptions during the next 75 years. Also shown for comparative purposes are the scheduled OASDI tax rates payable by employer and employee combined. Under each set of assumptions, the cost rate increases rapidly after 2005. Under the Alternatives I, II–A, and II–B assumptions, the outgo in relation to taxable payroll peaks around 2030, but under the Alternative III assumptions, the outgo is still increasing at the end of the valuation period. These projections indicate the need for action to restore the OASDI system to financial health over the long range.

Table 9 compares the estimated average OASDI cost rates and tax rates over the next 75 years under the four alternative sets of assumptions. The estimated average annual tax rate for the entire 75-year projection period

**Table 9.**—Estimated average OASDI tax rates, cost rates, and actuarial balance, 1982–2056

[Percentage of taxable payroll]

| Calendar year | Scheduled tax rate | Estimated cost rate[1] |  |  |  | Actuarial balance[2] |  |  |  |
|---|---|---|---|---|---|---|---|---|---|
|  |  | Alternative I | Alternative II–A | Alternative II–B | Alternative III | Alternative I | Alternative II–A | Alternative II–B | Alternative III |
| 25-year average: |  |  |  |  |  |  |  |  |  |
| 1982–2006 | 12.01 | 9.75 | 10.46 | 11.37 | 12.73 | 2.26 | 1.55 | 0.64 | −0.72 |
| 2007–2031 | 12.40 | 11.30 | 13.15 | 14.08 | 17.84 | 1.10 | −0.75 | −1.68 | −5.44 |
| 2032–2056 | 12.40 | 11.88 | 15.65 | 16.81 | 25.66 | 0.52 | −3.25 | −4.41 | −13.26 |
| 75-year average: |  |  |  |  |  |  |  |  |  |
| 1982–2056 | 12.27 | 10.98 | 13.09 | 14.09 | 18.75 | 1.29 | −0.82 | −1.82 | −6.47 |

[1] Cost rate is the estimated outgo as a percentage of taxable payroll.

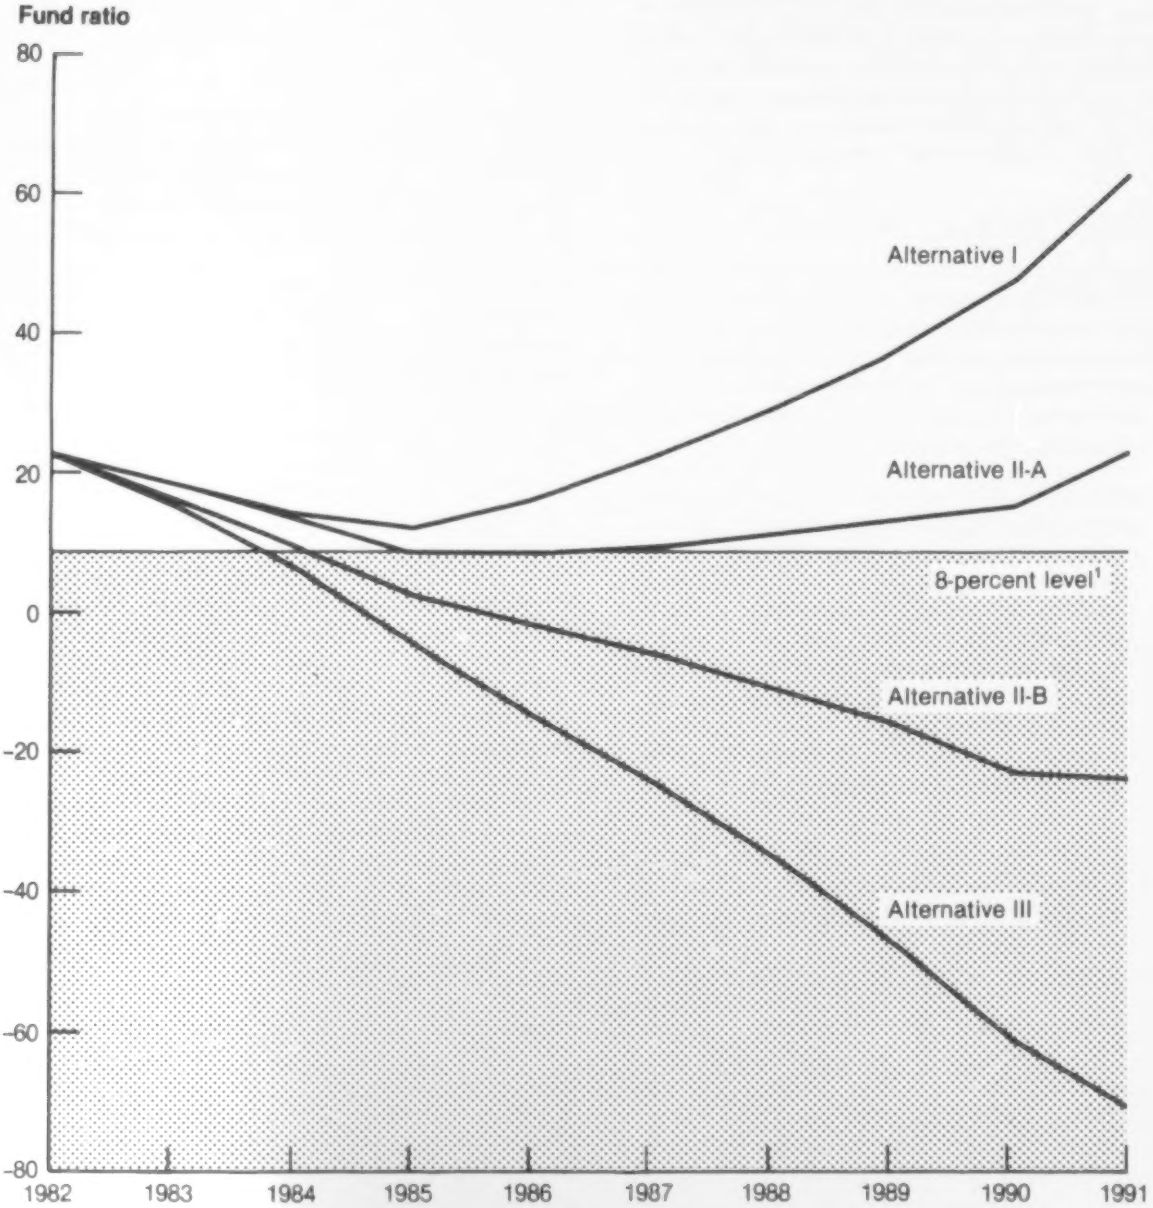
[2] Actuarial balance is the difference between the tax rate and the cost rate.

falls below the estimated average annual outgo for the period by 0.82 percent of taxable payroll under Alternative II-A and 1.82 percent under Alternative II-B.

Over the medium range—the next 25 years—the OASDI system has an actuarial surplus under all but the most pessimistic assumptions, largely because of the tax rate increase scheduled for 1990.

Based on the Alternative II-A assumptions, which are consistent with the economic assumptions in the President's 1983 Budget, the long-range average deficit for OASDI over the next 75 years is estimated to be 0.82 percent of taxable payroll. In the 1981 trustees report, the long-range deficit based on these assumptions was somewhat higher, at 0.93 percent of payroll. The legisla-

**Chart 1.**—Estimated combined OASI, DI, and HI Trust Fund ratios under alternative sets of assumptions, 1982-91



[1] A fund ratio as low as 8 percent would usually imply inability to pay all benefits on time.

tion enacted in 1981 reduced the deficit by an estimated 0.18 percent of payroll. Part of this reduction was offset, however, by the net effect of other changes in the estimate—changes in the valuation period, the short-range economic assumptions, disability assumptions, benefit and payroll levels due to later experience, and methodology.

Based on the Alternative II-B assumptions, which reflect somewhat lower economic growth than in Alternative II-A, the long-range deficit remains the same as in last year's report—1.82 percent of payroll. The reduction in the deficit that resulted from the 1981 legislation, 0.19 percent of payroll, was offset by the net effect of the other changes in the estimates.

# Characteristics of Newly Awarded Recipients of the Social Security Regular Minimum Benefit

by Bruce D. Schobel and Steven F. McKay*

The regular minimum Social Security benefit, which was eliminated for both current and future recipients under the Omnibus Budget Reconciliation Act of 1981 (Public Law 97-35), was restored for current beneficiaries only under additional legislation at year end. Following passage of Public Law 97-35, a study was undertaken to examine a group of newly eligible beneficiaries who would formerly have received the minimum benefit but, under that law, would not. Although the persons sampled have since become eligible for the benefit under the subsequent legislation, they closely resemble other future beneficiaries who will not be eligible for it. This article, which reports the findings of the study, indicates that those who will be ineligible for the minimum benefit in the future are mainly housewives, who will usually be able to receive larger benefits as spouses, and persons with significant noncovered employment, who will still receive windfall benefits to some extent. The data tend to disprove the notion that those who will not receive the minimum benefit in the future are lifetime low-earners.

The regular minimum benefit provision of the Social Security Act was the subject of much congressional action during the past year. Section 2201 of the Omnibus Budget Reconciliation Act of 1981 (Public Law 97-35, enacted August 13, 1981) repealed this provision both for current beneficiaries (for months after February 1982) and for newly eligible beneficiaries (for eligibility after October 1981). Section 2 of the Social Security Amendments of 1981 (Public Law 97-123, enacted December 29, 1981) restored the minimum benefit for current beneficiaries and deferred the elimination for newly eligible beneficiaries until January 1982, except for certain persons (primarily nuns) under a vow of poverty, for whom the elimination of the minimum benefit provision for newly eligible beneficiaries was deferred until 1992.

During the congressional debate on these bills (and on others that affected the minimum benefit provision), many statements were made concerning the characteristics of those beneficiaries who were currently receiving the minimum benefit and of those who would or would not receive it in the future. The characteristics of those already receiving the minimum benefit were known to some extent (although some important elements such as receipt of government-employee pensions were not very well-known). The characteristics of those not yet eligible and for whom the minimum benefit would possibly be eliminated were not known, however.

After enactment of Public Law 97-35, it was decided to investigate the first group of newly eligible beneficiaries who formerly would have received the minimum benefit but who, under this law, would not do so. Thus, copies of the applications and the earnings records of a random sample of retired workers becoming eligible (attaining age 62) and filing for benefits in November 1981 were obtained. By accident, a few cases of workers who became eligible and filed in December 1981 were also received. All of these persons have since become eligible for the minimum benefit once again as a result of Public Law 97-123. This analysis of their characteristics is still worthwhile, however, because they should be similar in nearly every respect to persons attaining age 62 in January 1982 or later, who will not be eligible for the minimum benefit.

## Description of the Regular Minimum Benefit Provision

The original Social Security Act of 1935 and all subsequent amendments to it before 1981 provided for some explicit minimum benefit level. Under the 1935 Act, the minimum monthly benefit amount was $10. This amount was increased many times over the years until, under the 1977 amendments, the minimum primary insurance amount (PIA) was "frozen" at $122 for all cohorts of workers first becoming eligible for benefits after 1978. It should be noted that the freezing of the minimum PIA, in combination with other provisions of the 1977 amendments, was equivalent to eventually eliminating it, although with a very long transition period, as described below.

---

* Office of the Actuary, Social Security Administration.

The 1977 amendments increased the amount of covered earnings required to obtain a quarter of coverage from a fixed $50 per quarter (which had not been changed since its introduction in the 1939 amendments) to $250 per quarter in 1978. This new earnings requirement is increased automatically every year to reflect increases in average wages. Thus, the amount of earnings needed to obtain the 40 quarters of coverage required for eligibility to primary retirement benefits for those attaining age 62 after 1990 (and who have not had a previous period of disability) will continually increase. After many years, the required earnings would have been sufficient to produce a PIA under the regular wage-indexed formula that would exceed the frozen $122 minimum. Thus, the regular minimum benefit provision would have eventually become inapplicable without any further change in the law.

The actual year of first inapplicability of the $122 minimum PIA would have been highly dependent on future wage increases. Under all four sets of long-range assumptions included in the 1981 OASDI Trustees Report, the regular minimum benefit provision would have become completely ineffective for new eligibles by 2017. If "realistic" earnings histories are assumed, this provision would have become inapplicable in virtually all cases much sooner, perhaps by 2000. In this regard, it should be noted that larger average annual wage increases would result in earlier inapplicability of the minimum benefit provision, while smaller average annual wage increases would result in later inapplicability.[1]

Although the initial minimum PIA was frozen at $122 under the 1977 amendments, newly eligible beneficiaries under that provision still receive any cost-of-living increases effective in and after the year of initial eligibility, but only, for years before age 65, if they were actually entitled—were eligible and had filed an application for benefits—and their benefits were not in total offset because of the earnings test. Thus, even though a beneficiary may have become first eligible for and entitled to benefits after a benefit increase in a particular year, that increase would still apply, thus raising the $122 minimum amount. The beneficiaries in this study, for example, all attained age 62 in late 1981. Thus, the PIA under the minimum benefit provision for each was $135.70 ($122 increased by the June 1981 cost-of-living adjustment of 11.2 percent).

The effects on individuals of eliminating the minimum benefit provision, in terms of actual reductions in monthly benefits, are not necessarily as significant as the effects on their PIA's. Although many individuals will have *temporary* reductions in benefits, sometimes until age 65 (or even later, in a few cases), the *ultimate* benefit amounts that will be payable (and which will usually be paid during the largest part of these individuals' remaining lifetimes) will be, in most cases, as large as, or even slightly larger than, those that would have been payable under previous law.

The next three sections describe in detail the effects on monthly benefits for individuals in various situations. The last section presents the analysis of the sample of newly eligible minimum benefit recipients.

## Effects of Dual Entitlement

The most important element in determining the effects on ultimate benefit amounts is dual entitlement—that is, entitlement to more than one type of benefit. Dually entitled beneficiaries will have, at most, only slight reductions, or even slight increases, in benefits, which reflect the different reduction factors that apply to retired-worker benefits and to spouse's benefits. (The effects on those dually entitled to benefits as aged widows are discussed later.)

Retired-worker benefits are reduced by a roughly "actuarial-equivalent" factor of 5/9 percent for each month of entitlement before age 65, resulting in a 20-percent reduction for entitlement in the month of attainment of age 62. (As will be discussed in the last section, entitlement at exact age 62 is now fairly unlikely, as a result of Public Law 97-35.) Spouse's benefits, which at age 65 are equal to 50 percent of the PIA of the primary beneficiary, are reduced by a somewhat less-than-actuarial factor of 25/36 percent per month, resulting in a 25-percent reduction at age 62. (The "actuarial" reduction factor for spouse's benefits would be about 30 percent for entitlement at age 62.[2] This proportion is larger than the reduction for primary benefits because it applies only during the shorter joint lifetime of the couple.)

A Social Security beneficiary usually receives any primary (worker's) benefit payable. Any larger auxiliary or survivor's benefit, however, is reduced by the amount of such primary benefit. Age-related reduction factors, when appropriate, are applied separately to the primary benefit and to the offset auxiliary benefit (except for aged widows, as discussed later). For example, consider a 62-year-old beneficiary who is eligible for a PIA as a worker of $200 and a spouse's benefit (before offset or reduction) of $300 a month (this would be the case if the other spouse had a PIA of $600). The spouse's benefit would become $100 after offset for the primary benefit. Then, the $200 primary benefit would be reduced by 20 percent, and the $100 spouse's benefit would be reduced by 25 percent, resulting in a total monthly benefit amount of $235 ($200 x .80 + $100 x .75).

---

[1] For a more detailed discussion of the phasing-out of the regular minimum benefit, see Steven F. McKay and Bruce D. Schobel, **Effects of the Various Social Security Benefit-Computation Methods** (Actuarial Study No. 86), Office of the Actuary, Social Security Administration, 1981.

[2] Robert J. Myers, **Social Security** (2d edition), Richard D. Irwin, Inc., 1981, page 48.

Elimination of the minimum benefit provision causes the PIA's of affected workers to be reduced (to a level below $135.70 for those in this study). Those eligible for larger spouse's benefits, however, will not be significantly affected, because such spouse's benefit (before reduction for age, but after offset) will be increased dollar for dollar by any reduction in the primary benefit, although then the larger reduction factor for spouse's benefits is applied to a larger amount. When the effects of rounding to multiples of 10 cents are ignored, the net reduction for cases of simultaneous dual entitlement to both a primary and a spouse's benefit is exactly equal to 5 percent of the reduction in the PIA for those becoming entitled in the month of attainment of age 62, and is less for those becoming entitled later, with no reduction for entitlements at age 65. Because most workers affected by the elimination of the minimum benefit provision will be eligible, on their own earnings record[3] under the regular benefit computation provisions, for benefits nearly as large as the minimum benefit under previous law (as will be discussed later), the actual reductions in PIA's and, consequently, in monthly benefit amounts, will be small even without dual entitlement, but especially small in cases with simultaneous dual entitlement.

Entitlement to an auxiliary benefit requires the entitlement of another person to a primary benefit (or the insured status of a deceased worker, in the case of survivor's benefits). Therefore, some beneficiaries who would have received minimum benefits under previous law will have temporary reductions in what their monthly benefits would otherwise have been until such time that dual entitlement begins. This is especially true for a worker with either a younger spouse who has a relatively large PIA but is not yet eligible for retired-worker benefits because age 62 has not been attained, or a spouse who is still substantially employed though aged 62 or older.

Although those persons who must wait for some period before becoming entitled to larger auxiliary benefits will have temporary reductions in monthly benefits until such dual entitlement begins, in many such cases, the ultimate benefit level will actually be slightly higher than it would have been under previous law. This somewhat unexpected result can be demonstrated by considering a worker who became entitled to a primary benefit at age 62, and who subsequently becomes entitled to a larger spouse's benefit at age 65. For purposes of illustration, assume that the PIA would have been $100 under previous law (the actual amount, of course, would be at least $122) and is $50 after the 1981 legislation. Further, assume that the spouse's benefit is $200 a month.

At age 62, after the 20-percent actuarial reduction factor is applied, this worker would have received $80 under previous law, but actually recieves $40. At age 65, the worker becomes entitled to a larger spouse's benefit that must be offset by the PIA, as described previously. Thus, the $200 spouse's benefit would have become $100 a month under previous law, and is $150 a month after elimination of the minimum benefit provision. The spouse's benefit after offset is not reduced for age because entitlement occurs at age 65. The previous reduction in the primary benefit, however, continues to apply. Thus, under previous law, this worker would have received a monthly benefit of $180 ($100 x .80 + $100), but instead will receive $190 ($50 x .80 + $150).[4] Interestingly, in cases such as these, the largest increases in ultimate monthly benefits over what would have been paid under previous law will occur for those workers with the largest reductions in their PIA's. Also, in all cases where entitlement to a spouse's benefit occurs more than 7 months after entitlement to an actuarially reduced primary benefit, some increase in ultimate monthly benefits will occur.

For the purposes of this article, dual entitlement is considered only if it is possible at the same time as entitlement to the primary benefit. As a consequence, however, the estimates of benefit reductions presented in the last section are a lower bound for the first month of entitlement and are overstated for later months when dual entitlement will actually occur for many of the sample cases. In the initial month, dual entitlement is assumed to occur if eligibility exists. If dual entitlement does not actually occur in such month, because of voluntary actions such as delayed retirement of the spouse, the resulting temporary reductions in initial monthly benefits are not taken into account, but neither are subsequent increases in ultimate benefits. Reductions in the initial months are taken into account in those cases where immediate dual-entitlement eligibility does not exist or where data on the spouse's earnings were unavailable. In most such cases, the reductions in benefits will largely or completely disappear when dual entitlement subsequently occurs, but such dual entitlement is not a certainty. The primary minimum benefit recipient could die, for example, before dual entitlement occurs.

---

[3] At times, these benefits have been called "earned benefits." This is erroneous usage because it implies that the benefit amount is actuarially equivalent to what could have been purchased with past OASDI taxes (either employee only or employee-employer combined). A more appropriate term is "formula benefit."

[4] Although there is an increase in the ultimate monthly benefit payable, the amount of increase is so small that total benefits paid would not equal what would have been payable under previous law for many years.

Although much of the preceding discussion applies equally to most types of dual entitlement, a noteworthy peculiarity in the law permits special treatment in the case of dually entitled aged widows (and, hereinafter implied in this term, dually entitled aged widowers). The so-called "deemed filing" provision of the Social Security Act requires that when a worker under age 65 claims old-age benefits, he or she must, if eligible, apply simultaneously for spouse's benefits. Aged widows, however, are permitted to apply for either a primary or a widow's benefit, whichever they choose.

This choice is significant only for those who wish to become entitled before age 65—that is, at the ages when actuarial (and near-actuarial) reduction factors apply. A widow can choose to receive a reduced primary benefit at age 62 and an unreduced widow's benefit at age 65—or the reverse. It is never advantageous to file for both benefits simultaneously, although it is not necessarily disadvantageous, either.

The choices that must be made by those eligible for benefits as widows became no less complicated after the elimination of the minimum benefit provision. However, because of the decisionmaking involved (and possible anti-selection), an analysis of widows receiving primary benefits that are affected by the elimination of the minimum benefit provision would be extraordinarily difficult (if not impossible). Therefore, persons who were currently widows at attainment of age 62 were specifically excluded from the study group. Of course, many of the persons who were included will eventually become widows, some before age 65. At the time of the study, however, none had yet had the opportunity to make a decision as to which benefit he or she would receive.

## Effects of Welfare-Type Benefits

Another reason why monthly income (from benefits and other sources) will not be significantly reduced in many cases by the elimination of the minimum benefit provision involves welfare-type payments. Some beneficiaries, particularly those without dual entitlement, will be eligible for Supplemental Security Income (SSI) payments at age 65 if they meet certain income and assets tests. In those cases, a temporary reduction in income would occur until age 65, but then the SSI payment would exactly equal the amount of the reduction in the Old-Age, Survivors, and Disability Insurance (OASDI) benefit, resulting in the same income as under previous law. Some such beneficiaries, including some in the study sample, may be receiving SSI disability payments before age 65, and, for these, no reduction in income would occur. In the analysis of sample cases, however, only OASDI benefit income is considered.

One welfare-type OASDI benefit is not considered—namely, the so-called "Prouty" benefits payable under section 228 of the Social Security Act. These special payments were authorized under the 1966 amendments for most persons aged 72 and older who have 3 quarters of coverage for every year after 1966 and before attainment of age 72 (no quarters of coverage were required for those who attained age 72 before 1968). These benefits are generally considered to be welfare in nature.[5] In fact, the payments for those with fewer than 3 quarters of coverage are financed by the general fund of the U.S. Treasury, rather than by the regular Social Security trust funds.

The special Prouty benefit is subject to the same automatic-adjustment provisions that apply to other OASDI benefits generally. For June 1981 to May 1982, the monthly benefit amount under the Prouty amendment for a single person is $117, a smaller amount than the previous regular minimum benefit (for these cohorts), for which the requirements have been easier to satisfy for many years. Thus, before the regular minimum PIA was frozen at $122 by the 1977 amendments, the Prouty benefits applied only to a closed group that was decreasing through deaths.

After the freezing of the regular minimum PIA, it became possible, though not very likely, for certain persons who will attain age 72 after 1990 (including some for whom the transitional guarantee-provision[6] would apply) to obtain a Prouty benefit (which is not frozen) that would exceed the regular minimum benefit, especially in those cases where entitlement occurred before age 65 and actuarial-reduction factors applied to the regular minimum or transitional-guarantee benefit. Such persons would need at least 72 quarters of coverage and, thus, would very likely qualify for larger formula benefits; however, it is possible that some will be able to obtain a higher benefit under the special Prouty provision.

The elimination of the minimum benefit provision makes entitlement to Prouty benefits somewhat more likely in 1992 and later for those persons who would formerly have been eligible for the minimum benefit. When these persons attain age 72, if they have enough quarters of coverage (75 for those attaining age 72 in 1992 and increasing by 3 quarters for each year thereafter), they may become dually entitled to whatever the formula benefit happens to be, plus whatever additional amount is needed to increase the total benefits to the Prouty benefit amount at that time, if it is higher. This situation is really quite unlikely because Prouty benefits are not payable if SSI payments are, and few persons with such low incomes will fail to qualify for SSI payments. Moreover, the earnings required to obtain the increasingly large number of quarters of coverage needed to qualify for Prouty benefits will eventually ensure a larger formula benefit.

---

[5] These benefits are generally considered to be welfare because they are usually paid by the general fund of the U.S. Treasury. Because there are no explicit income or assets tests associated with them, however, Prouty benefits are sometimes payable to persons in no need of welfare.

[6] The transitional-guarantee provision applies to persons who attain age 62 in 1979-83. It was intended to provide a smooth transition from the benefit-table method that applied before 1979 to the new wage-indexed method, although the transition is not in fact very smooth.

## Effects on Persons Under a Vow of Poverty

Certain persons under a vow of poverty will continue to be eligible for the $122 minimum PIA if they attain age 62 before 1992. Religious orders with members (generally nuns) who have taken a vow of poverty were first permitted to cover such persons under the Social Security program as a result of the 1972 amendments, with such coverage available retroactively to January 1, 1968. The amount of earnings reported is supposed to be the value of the subsistence provided, with a minimum of $100 per month. At the minimum level, these persons who currently attain age 62 would not yet have enough covered earnings to qualify for PIA's as large as the $122 minimum.

The deferral of elimination of the minimum benefit provision until 1992 for newly eligible persons under a vow of poverty will give them time to accumulate earnings histories sufficient to qualify them for larger benefits. This deferral, however, applies only to members of orders that elected Social Security coverage before December 29, 1981, the date of enactment of Public Law 97-123. For those remaining eligible for the minimum benefit, previous law will continue to apply and no reduction in benefits will occur. These cases are not as rare as might be suspected. As discussed later, some appeared in the study sample.

## Analysis of Sample of Minimum Benefit Cases

Copies of the applications and detailed earnings records were obtained on a sample of 165 randomly selected minimum benefit recipients who attained age 62 in November 1981 (a few folders were inadvertantly included for persons who attained age 62 in December) and who applied to receive benefits for the earliest possible month. In cases where it was known that the beneficiary had a spouse and where the Social Security number was available, detailed earnings records were also obtained for spouses. Persons who were currently widows were excluded for the reasons given in the section on dual entitlement.

Table 1 presents the distribution of the sample by sex and marital status. About 89 percent of those in the sample were women. About 89 percent of the men and 93 percent of the women were married (or divorced after having been married for 10 years or longer).

**Table 1.**—Number of sampled persons, by sex and marital status [1]

| Marital status | Total | Men | Women |
|---|---|---|---|
| Total | 165 | 18 | 147 |
| Married [2] | 152 | 16 | 136 |
| Unmarried [3] | 13 | 2 | 11 |

[1] Excludes widows from the study group (see page 14).

[2] Includes three women who were divorced after 10 or more years of marriage and classified as married because they are or will be eligible for spouse's benefits.

[3] Includes one man and two women who were divorced after less than 10 years of marriage and classified as unmarried.

Table 2 indicates the last year of covered earnings for those in the study group. This table is subject to some error because of possible delays in posting recent earnings. Recent earnings information is requested on the application for benefits, however, and that information was used when submitted by the applicant. Only 35 percent of the total had any earnings after 1975.

Table 3 shows the distribution by number of years of earnings for two periods—1937-81 and 1951-81. The figure for number of years with earnings for 1937-50, however, is artificial in most cases (and, in fact, biased upward) because only total earnings in that period are available. The law specifies a procedure for automatically allocating that total among certain years (generally, years after age 21 and before 1951) for benefit-computation purposes, and that method was used, in most cases, to estimate the number of years of earnings. Actual year-by-year earnings for 1937-50 are usually unavailable. Thus, the data for the number of years of earnings for 1951 and later are more reliable than the data for 1937 and later.

In the absence of the minimum benefit provision, affected beneficiaries will become eligible for the largest

**Table 2.**—Number and percentage distribution, by last year of covered earnings

| Last year of earnings | Number of beneficiaries | Percent of sample |
|---|---|---|
| Total | 165 | 100.0 |
| 1950 or earlier | 18 | 10.9 |
| 1951-55 | 8 | 4.8 |
| 1956-60 | 16 | 9.7 |
| 1961-65 | 10 | 6.1 |
| 1966-70 | 26 | 15.8 |
| 1971-75 | 29 | 17.6 |
| 1976-78 | 20 | 12.1 |
| 1979 and later | 38 | 23.0 |

PIA produced by the various other applicable benefit computation methods—the old-start method, the wage-indexed method, the transitional guarantee, and the special-minimum method.[7] The PIA-table method is not applicable to the affected cohorts of retirees (those first eligible after 1978 are not able to use it).

Table 4 presents the distribution of the sample by applicable benefit-computation method. The old-start method, which applies mainly to workers with substantial earnings before 1951 and with little earnings after 1950, produces the largest formula benefit (that is, a benefit based on earnings) for the vast majority (81 percent) of the sample cases, with the wage-indexed method a distant second. The old-start method applies to a much smaller (and rapidly decreasing) proportion of all newly eligible beneficiaries because the old-start benefit table was "frozen" by the 1977 amendments. Those beneficiaries shown as receiving regular minimum benefits are all persons under a vow of poverty, for whom the elimination of the minimum benefit provision was deferred.

The applicability of the special minimum benefit provision to regular minimum benefit recipients has been of particular interest. Under the special minimum benefit provision, which was included in the 1972 amendments specifically to assist steady workers with low incomes, the PIA is equal to a fixed dollar amount (about $16.07 for the period June 1981 to May 1982) multiplied by "years of coverage" in excess of 10, but not more than 30 (that is, a maximum of 20 years). Generally, a year of coverage is credited for any year in which earnings equaled or exceeded one-fourth of the taxable earnings base,[8] an amount that has generally been slightly lower than what would have been earned in a year of full-time work at the Federal minimum wage.

Table 5 shows the distribution of number of such years of coverage for the beneficiaries in the sample. Only one beneficiary had as many as 15 such years (which corresponds to a PIA of $80.40). The largest group had only 2 such years of coverage. As shown in table 4, the special minimum benefit provision did not produce the largest PIA for any persons. Thus, it appears that the regular minimum benefit recipients in this sample were not, in many cases, low-income steady workers, who would have been expected to receive the special minimum benefit.

Table 6 presents a distribution of PIA's by amount (without regard to the minimum benefit provision). No person in the sample had a formula PIA lower than $28.60, although PIA's as low as $7.10 were theoretical-

**Table 3.**—Number and percentage distribution, by number of years with earnings

| Number of years | 1937-81 |  | 1951-81 |  |
|---|---|---|---|---|
|  | Number of beneficiaries | Percent of sample | Number of beneficiaries | Percent of sample |
| Total | 165 | 100.0 | 165 | 100.0 |
| 0-3 | (1) | (1) | 35 | 21.2 |
| 4-7 | (1) | (1) | 45 | 27.3 |
| 8-11 | 31 | 18.8 | 30 | 18.2 |
| 12-15 | 57 | 34.5 | 38 | 23.0 |
| 16-19 | 43 | 26.1 | 11 | 6.7 |
| 20-23 | 19 | 11.5 | 5 | 3.0 |
| 24-27 | 9 | 5.5 | 1 | .6 |
| 28-31 | 4 | 2.4 | 0 | 0 |
| 32 or more | 2 | 1.2 | ... | ... |

[1] Workers who attained age 62 in 1981 and did not have a previous period of disability (none in the sample did) need 30 quarters of coverage to be eligible for primary retirement benefits. Normally, obtaining 30 quarters of coverage would require at least 8 years of earnings. Under a special provision applicable to certain persons with earnings in 1937-50, it is theoretically possible to acquire 30 quarters of coverage in only 4 years (with maximum earnings), but that provision was not applicable to any workers in the sample.

**Table 4.**—Number and percentage distribution, by applicable benefit computation method [1]

| Types of primary insurance amount | Number of beneficiaries | Percent of sample |
|---|---|---|
| Total | 165 | 100.0 |
| Old start | 133 | 80.6 |
| Wage indexed | 20 | 12.1 |
| Transitional guarantee | 7 | 4.2 |
| Special minimum | 0 | 0 |
| Regular minimum | [2] 5 | 3.0 |

[1] Assuming that the elimination of the minimum benefit provision applied to this sample.

[2] Eligibility continues because of the special exemption for certain persons under a vow of poverty.

**Table 5.**—Number and percentage distribution, by years of coverage as used for the special minimum benefit [1]

| Number of years of coverage | Number of beneficiaries | Percent of sample |
|---|---|---|
| Total | 165 | 100.0 |
| 0-3 | 53 | 32.1 |
| 4-7 | 48 | 29.1 |
| 8-11 | 36 | 21.8 |
| 12-15 | 28 | 17.0 |
| 16 or more | 0 | 0 |

[1] For 1951-78, a year of coverage is credited for any year with earnings equal to or exceeding one-fourth of the taxable earnings base. For 1937-50, 1 year of coverage is credited for each full $900 of earnings in the period, with a maximum of 14 years. After 1978, a year of coverage is credited for any year with earnings equal to or exceeding one-fourth of the "old-law" taxable earnings base—that is, what the base would have been in the absence of the ad hoc increases in the 1977 amendments.

---

[7] These methods are described in detail in Steven F. McKay and Bruce D. Schobel, **op. cit.**, and Steven F. McKay, **Computing a Social Security Benefit after the 1980 and 1981 Amendments** (Actuarial Note No. 111), Office of the Actuary, Social Security Administration, 1982.

[8] Special rules apply for years before 1951 and after 1978.

**Table 6.—Number and percentage distribution, by size of primary insurance amount (PIA)** [1]

| PIA | Number of beneficiaries | Percent of sample |
|---|---|---|
| Total | 165 | 100.0 |
| $0-$20.00 [2] | 0 | 0 |
| $20.10-$30.00 | 1 | .6 |
| $30.10-$40.00 | 1 | .6 |
| $40.10-$50.00 | 3 | 1.8 |
| $50.10-$60.00 | 5 | 3.0 |
| $60.10-$70.00 | 13 | 7.9 |
| $70.10-$80.00 | 15 | 9.1 |
| $80.10-$90.00 | 24 | 14.5 |
| $90.10-$100.00 | 16 | 9.7 |

| $130.10-$135.70 [3] | 22 | 13.3 |

[1] Assuming that the elimination of the minimum benefit provision applied to this sample.

[2] The lowest PIA theoretically possible for workers in the sample was $7.10.

[3] The PIA under the regular minimum provision is $135.70. Five persons in the study group would continue to receive exactly that amount because of the special exemption for certain persons under a vow of poverty.

**Table 7.—Newly awarded minimum benefit recipients, by sex, marital status, age, availability of spouse's earnings, and average primary insurance amount (PIA)**

| Item | Number | Average PIA of— | |
|---|---|---|---|
| | | Minimum benefit recipient | Spouse |
| Total | 165 | $99.46 | ....... |
| Men | 18 | 107.43 | ....... |
| Unmarried | 2 | 84.75 | ....... |
| Married | 16 | 110.26 | ....... |
| Minimum benefit recipient older than spouse: | | | |
| Spouse's earnings available | 8 | 111.47 | $179.79 |
| Spouse's earnings not available | 5 | 114.90 | ....... |
| Spouse of minimum benefit recipient older than recipient: | | | |
| Spouse's earnings available | 3 | 99.30 | 221.93 |
| Spouse's earnings not available | 0 | 0 | ....... |
| Women | 147 | 98.49 | ....... |
| Unmarried | 11 | 104.82 | ....... |
| Married | 136 | 97.97 | ....... |
| Minimum benefit recipient older than spouse: | | | |
| Spouse's earnings available | 30 | 97.48 | 516.57 |
| Spouse's earnings not available | 14 | 93.19 | ....... |
| Spouse of minimum benefit recipient older than recipient: | | | |
| Spouse's earnings available | 87 | 98.45 | 512.73 |
| Spouse's earnings not available | 5 | 105.96 | ....... |

ly possible. The PIA's were fairly uniformly distributed between $60.10 and $135.70. More than half (53 percent) of those in the sample had PIA's exceeding $100.00; only 6 percent had PIA's of less than $60.00.

The distribution of the PIA's (without regard to the minimum benefit provision) is shown by sex, marital status, relative ages of the spouses, and availability of spousal earnings information in table 7. The array of the married subgroups into those cases where the minimum benefit recipient is the older spouse and those where the recipient is the younger spouse is significant because, as noted earlier, in some cases (81 percent of the married men and 32 percent of the married women), the minimum benefit recipient became entitled before the other spouse was eligible for retirement benefits. In most of those cases, the minimum benefit recipient will eventually become eligible for a larger benefit as a spouse (or widow). Consequently, elimination of the minimum benefit provision will cause a temporary reduction in the monthly benefit payable, but not necessarily a permanent reduction. The PIA's for the not-yet-eligible younger spouses were calculated for the purposes of this table by assuming that they became disabled in November 1981. In fact, three spouses of beneficiaries in the sample were already receiving disabled-worker benefits before age 62, and, consequently, those three study-group members were immediately eligible for spouse's benefits. In those cases, the actual PIA's were used.

The next two tables compare monthly benefit amounts, both with and without regard to the minimum benefit provision. For the purposes of these tables, dual entitlement was considered only in those cases where the spouse was immediately eligible for a primary benefit and where the spouse's earnings were available. In those cases where the study-group member was eligible for a spouse's benefit but entitlement had not occurred for voluntary reasons such as delayed retirement on the part of the spouse, the resulting temporary reduction in benefits was disregarded. In those cases where immediate dual entitlement was not possible, generally because of the age of the spouse, the resulting benefit reduction was reflected, although it may eventually disappear when dual entitlement occurs. As noted earlier, however, such dual entitlement is not a certainty. Finally, in those cases where dual entitlement was possible but the spouse's earnings record was unavailable, monthly benefits were computed as though dual entitlement were not possible. Consequently, reductions in benefit amounts are shown for such cases.

It should be noted that in those cases where the spouse was still working, the computed PIA of such spouse and, thus, the computed spouse's benefit of the study-group member may change in the future as a result of the spouse's future earnings, which could either raise or lower the spouse's benefit relative to the primary benefit of the study-group member. These changes, in turn, can affect the amount of any reduction in monthly benefits payable. Therefore, it is not possible to determine precisely ultimate monthly benefits even in the better-documented cases, although there is no reason to suspect that a bias is introduced by using only earnings to date.

Table 8 presents the distribution by initial monthly benefit amount, both with and without regard to the minimum benefit provision, for the cases in the sample. This table (and the following one) is based on monthly benefit amounts rather than PIA's. In other words, it includes the effects of both dual entitlement (when possible immediately) and the reduction factors that apply to both primary and spouse's benefits when entitlement occurs before age 65.

Before the 1981 legislation, a person could become entitled to a benefit for the first month in which he or she became eligible (that is, met the age, insured-status, and any other legal-status requirements). Under Public Law 97-35, however, a person cannot become entitled to a benefit unless he or she is eligible throughout the entire month. The procedure for determining reduction factors for age was not changed. Therefore, the impact of this provision on those desiring to become entitled at the earliest possible time is that they must wait a month to receive benefits (unless they attain age 62 on the first day of the month), but they have 1 less month of reduction for age and, consequently, a slightly larger monthly benefit.

Most persons in the sample attained age 62 in November 1981, became entitled in December, and had PIA's of $135.70. Because the actuarial reduction factor for entitlement at age 62 years and 1 month is 19.44 percent, the primary monthly benefit payable was $109.40 in nearly every case. The smallest amount that could actually have been payable—$108.60—was for those who attained age 62 on the first day of the month and who therefore had a 20-percent reduction factor applied. The amounts in table 8 that are larger than $109.40 are all for cases involving dual entitlement to larger spouse's benefits.

Without regard to the minimum benefit provision, none of the sample cases would have received monthly benefits of less than $43.10, and most would have received much larger benefits. The average benefit actually payable was $160.59 per month, whereas, if the minimum benefit provision had not been applicable, it would have been $146.27, or a reduction of 8.9 percent. For those beneficiaries with immediate dual-entitlement eligibility, the average benefit payable was $200.22. Without the minimum benefit provision, it would have been $196.21, or a reduction of 2.0 percent. If only beneficiaries without immediate dual-entitlement eligibility are considered, the corresponding figures are $109.40 and $81.76—a reduction of 25.3 percent.

Table 9 presents the distribution of reductions in initial monthly benefits, assuming elimination of the minimum benefit provision. Slightly more than half (56 percent) of the persons in the sample had reductions ranging from zero to $5.00; about 7 percent had reductions of $50.00 or more. If only beneficiaries without immediate dual-entitlement eligibility are considered, the average reduction in the monthly benefit amount

**Table 8.**—Number and percentage distribution, by initial monthly benefit amount

| Benefit amount | With minimum benefit provision applicable | | Without minimum benefit provision applicable | |
|---|---|---|---|---|
| | Number of beneficiaries | Percent of sample | Number of beneficiaries | Percent of sample |
| Total | 165 | 100.0 | 165 | 100.0 |

| $270.10-$300.00 | 6 | 3.6 | 6 | 3.6 |
| $300.10 or more | 0 | 0 | 0 | 0 |

[1] No monthly benefit amount less than $108.60 was possible for this group (see top of second column of this page).

[2] The average monthly benefit amount was $196.21 for 93 persons with immediate dual-entitlement eligibility after elimination of the minimum benefit provision; it was $81.76 for 72 persons without such eligibility.

**Table 9.**—Number and percentage distribution, by initial reduction in monthly benefits [1]

| Reduced benefit amount | Number of beneficiaries | Percent of sample |
|---|---|---|
| Total | 165 | 100.0 |
| No reduction | [2]7 | 4.2 |
| $0-$1.00 | 25 | 15.2 |

| $60.10-$70.00 | 2 | 1.2 |
| $70.10 or more | 0 | 0 |
| Average reduction | [3]$14.32 | |

[1] Assuming that the elimination of the minimum benefit provision applied to this sample.

[2] Includes 5 persons for whom the minimum benefit provision would continue to apply because of the special exemption for persons under a vow of poverty and 2 persons for whom, after rounding to multiples of $0.10, the benefit amount would not be reduced.

[3] The average reduction was $4.01 for 93 persons with immediate dual-entitlement eligibility after elimination of the minimum benefit provision; it was $27.64 for 72 persons without such eligibility.

was $27.64. Many of these persons, as noted earlier, may become dually entitled to larger auxiliary benefits at some time, although this is not a certainty. In addition, income from non-OASDI programs (usually of a welfare type) is not considered here.

Table 10 presents the distribution by reason for receipt of a minimum PIA. Although Federal privacy regulations prevented the direct questioning of these beneficiaries to determine the cause of their very low or irregular lifetime earnings, certain evidence was available in the applications for benefits, either as answers to required questions or as voluntarily self-reported information. Some beneficiaries could conceivably have fallen into more than one of the categories listed in table 10; in such cases, only the category that best described the particular beneficiary was used.

By far the largest single group, which contained 129 members and 78 percent of the sample, was made up of housewives. These persons, all married women, had very limited attachment to the labor force, sometimes just barely enough to have been insured at all for a primary benefit and sometimes with no covered work reported since World War II. In many of these cases, the husband was—or would eventually become—eligible for a much larger PIA, and this would likely result in the study-group member receiving a larger benefit as a spouse than as a primary beneficiary.

The sample contained 17 persons (10 percent) with significant periods of noncovered employment (including those with Federal civilian and noncovered State and local government service). For most of these persons, the regular minimum benefit represented a large windfall that had been a subject of congressional debate for many years. Even the formula benefits that will be payable to such persons after elimination of the regular minimum benefit provision reflect unduly favorable treatment, because the OASDI weighted benefit formula provides larger relative benefits to low earners, and workers with significant periods of noncovered employment usually appear to be low earners, insofar as covered earnings are concerned.

Five persons in the sample (3 percent) were nuns under a vow of poverty. As discusssed earlier, these persons had not been covered for Social Security purposes long enough to have sufficient earnings to warrant a larger formula benefit. All such persons attaining age 62 before 1992 were exempted from the elimination of the minimum benefit provision.

**Table 10.**—Number and percentage distribution of recipients of the minimum primary insurance amount, by reason for receipt

| Reason for receipt of minimum benefit | Number of beneficiaries | Percent of sample |
|---|---|---|
| Total | 165 | 100.0 |
| Housewife | 129 | 78.2 |
| Federal civil service employment | 14 | 8.5 |
| State and local noncovered employment | 3 | 1.8 |
| Vow of poverty | 5 | 3.0 |
| SSI disability | 4 | 2.4 |
| Unknown | 10 | 6.1 |

Four study-group members (2.4 percent of the sample) were already receiving SSI disability payments at age 62. Elimination of the minimum benefit provision would have no effect on such individuals, although the proportion of their benefits paid by the OASI Trust Fund would be somewhat smaller. These persons were apparently ineligible for disabled-worker benefits under the Social Security program (which uses the same definition of disability as does the SSI program), and yet they were fully insured. They obviously had been unable to meet the recency-of-work test for disability-insured status, which generally requires 20 quarters of coverage in the 40 quarters ending with the quarter in which the disability began. Finally, for 10 persons, who represented 6 percent of the sample, the cause of their very low or irregular lifetime earnings histories could not be determined.

It should be noted that a similar analysis of minimum benefit recipients (or persons who would have been minimum benefit recipients under previous law) conducted at a higher age than 62 would probably reveal a somewhat higher proportion of workers in noncovered employment. Some such workers continue to work beyond their initial eligibility for OASDI benefits because such benefits would be entirely or partially withheld as a result of the earnings test, under which $1 of benefits is lost for each $2 of earnings (including noncovered earnings) in excess of a specific amount ($4,440 in 1982 for those under age 65). The sample considered in this study consists entirely of persons who became eligible and filed for benefits at age 62 (or as soon as possible thereafter). As a consequence, the sample is skewed somewhat toward persons without recent earnings.

[1] Emergency relief funds of $1,630.3 million in 1940 total, not included elsewhere. Includes training allowances to unemployed workers under Area Redevelopment Act and Manpower Development and Training Act for 1961-75, not shown separately.

[2] Beginning December 1980, includes public assistance payment revisions for 1940-79.

[3] Retirement and survivor benefits beginning 1940; disability benefits beginning 1957. Beginning October 1966, includes special benefits authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[4] Includes annuities to widows under joint-and-survivor election before 1947. Beginning February 1967, includes supplemental annuities for career railroad employees.

[5] Excludes refunds of contributions to employees who leave service.

[6] Includes survivor annuities under joint-and-survivor elections before 1948.

[7] Represents Federal contributory systems other than civil service, Federal noncontributory systems for civilian employees and career military personnel, and systems for State and local government employees. Monthly data not available.

[8] Payments to veterans and survivors of deceased veterans, including special allowances for survivors of veterans who did not qualify under OASDHI (Servicemen's and Veterans' Survivor Benefit Act of 1956) and through June 1973, subsistence payments to disabled veterans undergoing training.

[9] Death payments.

[10] Includes annual and monthly data for railroad retirement, veterans' programs, and Federal civil service retirement. For "other" public employee systems, annual data only.

[11] Annual and monthly totals include regular State unemployment insurance program and payments made by States as agents of the Federal Government under the Federal employees' unemployment compensation program and under the Ex-Servicemen's Compensation Act of 1958. Annual data only for payments under Servicemen's Readjustment Act of 1944, Veterans' Readjustment Act of 1952, Trade Expansion Act of 1962, Disaster Relief Act of 1970, and the temporary and permanent extended unemployment insurance programs. Beginning 1961, includes program in Puerto Rico.

[12] Benefits in Rhode Island (from 1943), in California (from 1947), in New Jersey (from 1949), in New York (from 1950), in Puerto Rico (from 1970), including payments under private plans where applicable. Monthly data not available.

[13] Benefits began 1947.

[14] Under Federal workers' compensation laws and under State laws paid by private insurance carriers, State funds, and self-insurers. Beginning 1959, includes data for Alaska and Hawaii. Monthly data refer only to Federal "black lung" benefits administered by Social Security Administration (starting 1970).

[15] Includes Aid to Families with Dependent Children and general assistance. Through 1973 includes old-age assistance, aid to the blind, and aid to the permanently and totally disabled. Includes payments to intermediate-care facilities (July 1968-December 1971), and payments for emergency assistance, beginning July 1969. Includes money payments under medical assistance for the aged (1960-69). Excludes medical vendor payments. Starting 1974, includes money payments to the aged, blind, and disabled in Guam, Puerto Rico, and the Virgin Islands under federally aided public assistance programs.

[16] Supersedes the public assistance programs of old-age assistance, aid to the blind, and aid to the permanently and totally disabled in the 50 States and the District of Columbia, beginning 1974; beginning 1978, in the Northern Mariana Islands. Annual, but not monthly, totals include payments under State-administered supplementary programs.

[17] Data not available.

Source: Based on reports of administrative agencies on a checks-issued basis (including retroactive payments) where available. Data for public assistance and State unemployment insurance programs adjusted monthly, other data adjusted annually.

## Table M-2.—Public income-maintenance programs: Hospital and medical care payments, 1940–81

[In millions]

| Period | Total | OASDHI (health insurance) [1] |  |  | Other programs |  |  |  |

[1] Benefit expenditures from the Federal hospital insurance and supplementary medical insurance trust funds as reported by the U.S. Treasury.

[2] Excludes payments by Railroad Retirement Board for beneficiaries in Canadian hospitals.

[3] Benefits in California and New York (from 1950), including payments under private plans. Monthly data not available.

[4] Benefits under Federal workers' compensation laws and under State laws paid by private insurance carriers, State funds, and self-insurers. Beginning 1959, includes data for Alaska and Hawaii. Monthly data not available.

[5] Federal matching for medical vendor payments under public assistance began October 1950.

[6] Data not available.

Source: U.S. Treasury and unpublished data from administrative agencies.

## Table M-3.—Selected social insurance and related programs: Beneficiaries of cash payments, 1940-81

---

[1] Includes dependents.

[2] Beginning October 1966, includes special benefits authorized by 1966 legislation for persons aged 72 and over and not insured under the regular or transitional provisions of the Social Security Act.

[3] Monthly number at end of quarter.

[4] Average number during 14-day registration period.

[5] Average weekly number in December. Includes regular State unemployment insurance, the Federal employees' unemployment compensation program, and the ex-servicemen's compensation program.

[6] Includes dependents and survivors.

[7] Less than 500.

[8] Data not available.

Source: Based on reports of administrative agencies.

## Table M-4.—Selected social insurance and related programs: Contributions and taxes collected, 1940–82.

[1] Represents contributions of employees, and the self-employed in employments covered by OASDHI under the Social Security Act, on an estimated basis, with suitable subsequent adjustments. Data for earlier years reflect former appropriation bases. Includes deposits by States under voluntary coverage agreements. Employee-tax refunds deducted. Excludes transfer from general revenues.

[2] Excludes transfers between OASDHI system and railroad retirement account under the financial interchange provisions of the Railroad Retirement Act.

[3] Represents employee and Government contributions. Beginning 1968, also includes Foreign Service and contributory survivor programs for Federal judiciary and Tax Court. For civil service, employee share includes voluntary contributions to purchase additional annuity; government share includes Federal and District of Columbia agency contributions and, beginning 1968, Federal payment for current unfunded liability.

[4] Beginning 1959, net of tax refunds. Contributions for hospital insurance of railroad workers are collected and reported with railroad retirement contribution initially and are transferred once a year (usually in August) to the hospital insurance trust fund; data for that month only are adjusted by the Treasury source to reflect the transfer.

[5] Excludes reimbursement from Treasury general funds for cost of benefits for persons not insured for cash benefits under OASDHI or railroad retirement. Includes contributions for hospital insurance coverage of railroad workers (principal amount only), see footnote 4; and, beginning July 1973, premiums for voluntary coverage of uninsured individuals aged 65 and over.

[6] Through 1952 represents deposits in State clearing accounts of contributions plus penalties and interest collected from employers and contributions from employees (3 States in recent years), as reported by State agencies (to Department of Labor, 1950–52). Starting 1953, represents State deposits in (Federal) unemployment trust fund.

[7] Represents taxes paid by employers under the Federal Unemployment Tax Act. Beginning 1961, net of tax refunds. Includes tax proceeds for financing temporary extended unemployment compensation program for 1958 and 1961. Some monthly figures include Treasury adjustments (minus) for misclassification of prior month's taxes.

[8] Beginning 1947, also covers railroad temporary disability insurance.

[9] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (October 1, 1976).

---

[1] Equals amounts appropriated (estimated tax collections, subsequently adjusted). Includes deposits by States under voluntary coverage agreements and deductions for refund of estimated employee-tax overpayment. Early years reflect former appropriation bases.

[2] From 1947 to 1951, for benefits with respect to certain World War II veterans. Beginning 1966, for military wage credits, and beginning December 1968, for military credits and Federal payment for special age-72 benefits, see footnote 4.

[3] Includes interfund transfer of interest on reimbursed administrative expenses, 1958 to date (see footnote 6).

[4] Before deductions for (1) SMI premium payments and, when applicable, (2) recoupment of overpayments of hospital and medical service benefits provided to OASI beneficiaries. Includes special benefits for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[5] The purpose of the financial interchange provisions of the Railroad Retirement Act, as amended, is to place the trust funds in the same position in which they would have been had railroad employment always been covered under OASDHI. Negative figures represent transfers to OASI trust fund. Excludes transfers to HI trust fund for hospital insurance coverage of railroad workers (accounted for in table M-7).

[6] Beginning 1951, adjusted for reimbursement to trust fund of small amounts for gifts, sales, or services. Beginning 1953, includes expenses for central and regional office building construction. Except for reimbursements from the appropriate trust fund to Treasury Department for its expenses as incurred, beginning 1957 administrative expenses for OASI and DI were paid initially from OASI trust fund with subsequent reimbursement, plus interest (see footnote 3), from DI trust fund for allocated cost of DI operations. Beginning 1966, subject to subsequent adjustment among all 4 social security trust funds for allocated cost of each operation.

[7] Book value: includes net unamortized premium and discount, accrued interest purchased, and repayment of interest accrued on bonds at time of purchase.

[8] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[9] Reflects assets of predecessor fund, the old age reserve account, January 1937-December 1939.

[10] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (October 1, 1976).

[11] Public Law 96-403 approved October 9, 1980, provides for the reallocation of social security tax receipts between the OASI and DI trust funds for calendar years 1980-81. Transfers from the DI to the OASI fund were required to implement the change retroactive to January 1980. A $3,528,795,000 transfer in October 1980 represented the accumulated tax receipts, and a $120,801,000 transfer in April 1981 was the interest earned on this amount.

[1] Equals amounts appropriated (estimated tax collections, subsequently adjusted). Includes deposits by States under voluntary coverage agreements and deductions for refund of estimated employee-tax overpayment. Early years reflect appropriation bases.

[2] Transfers (principal only) from the railroad retirement account with respect to contributions for disability insurance coverage of railroad workers.

[3] From 1950-51, for benefits with respect to certain World War II veterans. Beginning 1966, for military wage credits, and beginning December 1968, for military credits and Federal payment for special age-72 benefits, see footnote 4.

[4] Includes interfund transfer of interest on reimbursed administrative expenses 1958 to date (see footnote 6).

[5] Before deductions for (1) SMI premium payments and, when applicable, (2) recoupment of overpayments of hospital and medical service benefits provided to OASI beneficiaries. Includes special benefits for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[6] The purpose of the financial interchange provisions of the Railroad Retirement Act, as amended, is to place the trust funds in the same position in which they would have been had railroad employment always been covered under OASDHI. Negative figures represent transfers to OASI trust fund. Excludes transfers to HI trust fund for hospital insurance coverage of railroad workers (accounted for in table M-7).

[7] Beginning 1951, adjusted for reimbursement to trust fund of small amounts for gifts, sales, or services. Beginning 1953, includes expenses for central and regional office building construction. Except for reimbursements from the appropriate trust fund to Treasury Department for its expenses as incurred, beginning 1957 administrative expenses for OASI and DI were paid initially from OASI trust fund with subsequent reimbursement, plus interest (see footnote 3), from DI trust fund for allocated cost of DI operations. Beginning 1966, subject to subsequent adjustment among all 4 social security trust funds for allocated cost of each operation.

[8] Book value: includes net unamortized premium and discount, accrued interest purchased, and repayment of interest accrued on bonds at time of purchase.

[9] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[10] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (October 1, 1976).

[11] Public Law 96-403 approved October 9, 1980, provides for the reallocation of social security tax receipts between the OASI and DI trust funds for calendar years 1980-81. Transfers from the DI to the OASI fund were required to implement the change retroactive to January 1980. A $3,528,795,000 transfer in October 1980 represented the accumulated tax receipts, and a $120,801,000 transfer in April 1981 was the interest earned on this amount.

[1] Represents amounts appropriated (estimated tax collections with suitable subsequent adjustments) after deductions for refund of estimated amount of employee-tax overpayment; and, beginning July 1973, premiums for coverage of uninsured individuals aged 65 and over.

[2] Transfers (principal only) from the railroad retirement account with respect to contributions for hospital insurance coverage of railroad workers.

[3] Represents Federal Government transfers from general funds appropriations to meet costs of benefits for persons not insured for cash benefits under OASDHI or railroad retirement and for costs of benefits arising from military wage credits.

[4] Interest and profit on investments after transfers of interest or reimbursed administrative expenses (see footnote 6) and interest on amounts transferred from railroad retirement account (see footnote 3).

[5] Represents (1) payment vouchers on letters of credit issued to fiscal intermediaries under sec. 1816 and (2) direct payments to providers of services under sec. 1815 of the Social Security Act.

[6] Subject to subsequent adjustment among all 4 social security trust funds for allocated cost of each operation. Fiscal year 1966 includes "tool-up" period from date of enactment of Social Security Amendments of 1965 (July 20).

[7] Book value: Includes net unamortized premium and discount, and, when applicable, accrued interest purchased and repayments on accounts of interest accrued on bonds at time of purchase.

[8] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[9] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (October 1, 1976).

[1] Represents voluntary premium payments from and in behalf of the insured aged and (beginning July 1973) disabled.

[2] Represents Federal Government transfers from general funds appropriations to match aggregate premiums paid.

[3] Represents interest and profit on investments, after transfers of interest on reimbursed administrative expenses (see footnote 5).

[4] Represents payment vouchers on letters of credit issued to carriers under section 1842 of the Social Security Act.

[5] Subject to subsequent adjustment among all 4 social security trust funds for allocated cost of each operation. Fiscal year 1966 includes "tool-up" period from date of enactment of Social Security Amendments of 1965 (July 30).

[6] Book value: Includes net unamortized premium and discount, and, when applicable, accrued interest purchased and repayments on account of interest accrued on bonds at the time of purchase.

[7] Minus figures, if any, represent overdrafts that are covered by redemption of securities on first working day of following month.

[8] Between end of fiscal year 1976 (June 30) and start of fiscal year 1977 (October 1, 1976).

[1] At the end of 1980 an estimated 40,000 Railroad Retirement beneficiaries would have been eligible for Social Security benefits had they applied. These persons receive their Social Security benefits as part of their Railroad Retirement annuity and are not included in the above tabulations. Of these 40,000 beneficiaries, 19,000 were retired workers, 5,500 were disabled workers, and 15,500 were spouses and children.

[2] Benefits paid from the OASI trust fund to retired workers and their spouses and children and to all survivors. Includes special benefits authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[3] Benefits paid from the DI trust fund to disabled workers and their spouses and children.

## Table M-10.—OASDI cash benefits: Number of monthly benefits in current-payment status for retired workers and their spouses and children and for survivors, 1940–82

[Data contain some duplication arising from dual entitlement; see the **1980 Annual Statistical Supplement**, p. 9]

| At end of selected month | Total | Retired workers [1] | Wives and husbands [1 2] | Children [3] | Widowed mothers [4] | Widows and widowers [1 5] | Parents [1] | Persons with special age-72 benefits [6] |

[1] Persons aged 65 and over (and aged 62–64, beginning 1956 for women and 1961 for men).

[2] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[5] Includes, beginning September 1965, widows aged 60–61 and entitled surviving divorced wives aged 60 and over; beginning March 1968, disabled widows aged 50–59 and disabled widowers aged 50–61; and, beginning January 1973, nondisabled widowers aged 60–61.

[6] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

## Table M-11.—OASDI cash benefits: Amount of monthly benefits in current-payment status for retired workers and their spouses and children and for survivors, 1940–82

[In thousands]

| At end of selected month | Total | Retired workers [1] | Wives and husbands [1] [2] | Children [3] | Widowed mothers [4] | Widows and widowers [1] [5] | Parents [1] | Persons with special age-72 benefits [6] |
|---|---|---|---|---|---|---|---|---|

[1] July 1957-October 1960, disabled workers aged 50-64; beginning November 1960, disabled workers under age 65.

[2] Mainly wives under age 65 with entitled children in their care.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18-21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] November data; December data not available.

## Table M-13.—OASDI cash benefits: Average amount of monthly benefits, by type of beneficiary, 1940–82

| Period [1] | Retired workers and their spouses and children | | | Survivors of deceased workers | | | | Disabled workers and their spouses and children | | | Persons with special age-72 benefits [9] |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | Retired workers [2] | Wives and husbands [2] [3] | Children [4] | Children [4] | Widowed mothers [5] | Widows and widowers [2] [6] | Parents [2] | Disabled workers [7] | Wives and husbands [8] | Children [4] | |
| | Average benefits in current-payment status at end of period | | | | | | | | | | |
| 1940 | $22.60 | $12.13 | $9.70 | $12.22 | $19.61 | $20.28 | $13.09 | ....... | ....... | ....... | ....... |

---

[1] Some years shown in several parts because of amendments changing the benefit provisions.

[2] Persons aged 65 and over (and aged 62–64, beginning 1956 for women and 1961 for men).

[3] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[4] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[5] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[6] Includes, beginning September 1965, widows aged 60–61 and entitled surviving divorced wives aged 60 and over; beginning March 1968, disabled widows aged 50–59 and disabled widowers aged 50–61; and, beginning January 1973, nondisabled widowers aged 60–61.

[7] July 1957–October 1960, disabled workers aged 50–64; beginning November 1960, disabled workers under age 65.

[8] Includes wife beneficiaries under age 65 with entitled children in their care, and, beginning September 1965, entitled divorced wives.

[9] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

**Table M-14.—OASDI cash benefits: Estimated number of beneficiaries with monthly benefits in current-payment status, by age group and by type of benefit, 1940–82**

[In thousands. Adjusted to exclude duplication arising from dual entitlement: See the **1980 Annual Statistical Supplement**, p. 9]

[1] At the end of 1980 an estimated 40,000 Railroad Retirement beneficiaries would have been eligible for Social Security benefits had they applied. These persons receive their Social Security benefits as part of their Railroad Retirement annuity and are not included in the above tabulations. Of these 40,000 beneficiaries, 19,000 were retired workers, 5,500 were disabled workers, and 15,500 were spouses and children.

[2] Includes spouses and children of disabled workers.

[3] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[4] Fewer than 500.

[5] November data; December data not available.

## Table M-15.—OASDI cash benefits: Number of monthly benefits awarded to retired workers and their spouses and children and to survivors, 1940–82

| Period | Total | Retired workers [1] | Wives and husbands [1] [2] | Children [3] | Widowed mothers [4] | Widows and widowers [1] [5] | Parents [1] | Persons with special age-72 benefits [6] |

| 1982 | | | | | | | | |
| January | 361,332 | 196,272 | 35,844 | 69,303 | 8,707 | 51,080 | 54 | 72 |
| February | 266,812 | 131,693 | 28,267 | 60,530 | 6,493 | 39,696 | 50 | 83 |

[1] Persons aged 65 and over (and aged 62–64, beginning 1956 for women and 1961 for men).

[2] Includes, beginning 1950, wife beneficiaries under age 65 with entitled children in their care and, beginning September 1965, entitled divorced wives.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18–21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes, beginning 1950, surviving divorced mothers with entitled children in their care and, beginning June 1975, widowed fathers with entitled children in their care.

[5] Includes, beginning September 1965, widows aged 60–61 and entitled surviving divorced wives, aged 60 and over; beginning March 1968, disabled widows aged 50–59 and disabled widowers aged 50–61; and, beginning January 1973, nondisabled widowers aged 60–61.

[6] Authorized by 1966 legislation for persons aged 72 and over not insured under the regular or transitional provisions of the Social Security Act.

[7] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

[8] The June awards include only those with the new benefit rates.

## Table M-16.—OASDI cash benefits: Number of monthly benefits awarded to retired workers and their spouses, by payment status at time of award, 1950-82

[Number of awards in thousands]

| Period | Retired workers | | | Wives and husbands | | |

| February | 132 | 116 | 88 | 28 | 24 | 86 |

[1] Includes awards currently payable and conditional or deferred awards. Conditional or deferred awards are those suspended immediately following determination, chiefly because of earnings of the beneficiary or the worker on whose account benefits are paid; since September 1965 most conditional and deferred awards have been made primarily for the purpose of assuring eligibility for hospital insurance benefits.

[2] Estimated on basis of awards for 10 months.

[3] Data not available.

[4] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

[5] The June awards include only those with the new benefit rates.

## Table M-17.—OASDI cash benefits: Number of monthly benefits awarded to disabled workers and their spouses and children, 1957-82

| Period | Total | Disabled workers [1] | Wives and husbands [2] | Children [3] |

| January | 62,562 | 28,317 | 7,601 | 26,644 |
| February | 56,319 | 24,565 | 6,616 | 25,138 |

[1] July 1957–October 1960, disabled workers aged 50–64; beginning November 1960, disabled workers under age 65.

[2] Mainly wives under age 65 with entitled children in their care.

[3] Includes, beginning 1957, disabled persons aged 18 and over whose disability began before age 22 (age 18 before January 1973) and, beginning September 1965, entitled full-time students aged 18-21. Beginning January 1973, students who attain age 22 before end of semester may continue to receive benefits until end of semester.

[4] Includes a significant number of awards at the pre-June benefit rates that would normally be included with the June figures.

[5] The June awards include only those with the new benefit rates.

### Table M-18.—Supplemental Security Income for the aged, blind, and disabled: Number of persons receiving federally administered payments and total amount, by reason for eligibility, February 1982

| Reason for eligibility | All persons | Amount of payments (in thousands) | | |
|---|---|---|---|---|
| | | Total | Federal SSI | State supplementation [1] |
| Total | 3,999,718 | $723,631 | $567,086 | $156,544 |
| Aged | 1,662,717 | 228,117 | 166,837 | 61,279 |
| Blind | [2] 78,351 | 17,658 | 12,794 | 4,865 |
| Disabled | [3] 2,258,650 | 477,856 | 387,455 | 90,401 |

[1] Excludes payments for State supplementation under State-administered programs.

[2] Includes approximately 24,000 persons aged 65 and over.

[3] Includes approximately 419,000 persons aged 65 and over.

### Table M-20.—Supplemental Security Income for the aged, blind, and disabled: Number of persons initially awarded federally administered payments, by reason for eligibility, 1974–81

| Period | Total | Aged | Blind | Disabled |
|---|---|---|---|---|
| 1974 [1] | 890,768 | 498,555 | 5,206 | 387,007 |
| 1975 | 702,147 | 259,823 | 5,834 | 436,490 |
| 1976 | 542,355 | 171,798 | 4,735 | 365,822 |
| 1977 | 557,570 | 189,750 | 5,753 | 362,067 |
| 1978 | 532,447 | 177,224 | 6,375 | 348,848 |

---

[1] Represents data for payments to recipients of the specified type of assistance under separate programs and under the combined State adult assistance programs. Superseded by supplemental security income program in the 50 States and the District of Columbia, beginning January 1974.

[2] Beginning September 1965, excludes State blind pension program in Pennsylvania administered under State law without Federal participation.

[3] Includes as recipients the children and 1 or both parents or 1 caretaker relative other than a parent in families in which the requirements of such adults were considered in determining the amount of assistance.

[4] Data incomplete.

[5] Represents average per family. Beginning January 1972, includes New York City.

## Table M-29.—Public assistance: Total money payments, by program and emergency assistance, 1945–80

[In thousands. Data subject to revision.]

| Period | Total [1] | Money payments | | | | | | Emergency assistance payments [4] |
|---|---|---|---|---|---|---|---|---|
| | | Total [2] | Old-age assistance [3] | Aid to the blind [3] | Aid to the permanently and totally disabled [3] | Aid to families with dependent children | General assistance | |

[1] Includes money payments for institutional services in intermediate-care facilities for 1968–71.

[2] Includes money payments for medical assistance for the aged for 1960–69.

[3] Superseded by supplemental security income program in the 50 States and the District of Columbia beginning 1974. Data for 1974 and thereafter are for only Guam, Puerto Rico, and the Virgin Islands.

[4] Money payments to families and medical vendor payments to needy families with children, authorized under title IV of the Social Security Act.

## Table M-30.—Aid to Families with Dependent Children: Recipients of cash payments and total amount, by State, December 1980

[Includes nonmedical vendor payments, unemployed father segment, and AFDC foster-care data]

| State | Number of— | | | Amount of payments | | | Percentage change from— | | | |
